## **1. INTRODUCTION**

### **1.1 Background**

This report details a Phase 1 Desk Study report and site reconnaissance completed by RSA Geotechnics on behalf of A2 Dominion Developments Ltd.

The planning application proposes the “Demolition of all existing buildings and redevelopment of the site to provide 164 mixed-tenure homes (Use Class C3), new floor space for town centre uses (Use Classes A1, A2, A3, D1 or D2), new employment floor space (including four dedicated units for start-up businesses) (Use Class B1), a community meeting room and new and improved public open spaces, together with associated new landscaping, on-site access, servicing and disabled car parking”.

The proposed scheme also allows for the rerouting of the public footpath known as ‘Potteries Path’ and the regeneration of the existing public play area to the east of the site. Proposed development plans can be found on drawing number 14152DS/1 attached to this report.

This report has been prepared for the sole internal use and reliance of A2 Dominion Developments Ltd. It shall not be relied upon by other parties without the express written authority of RSA Geotechnics Limited. If an unauthorised third party comes into possession of this report they rely on it at their own risk and the authors owe them no duty of care and skill.

Advice and recommendations in this report have been based on the findings of the site reconnaissance and desk study information. It must be appreciated that not finding indicators does not mean that hazardous substances do not exist at the site.

RSA Geotechnics Limited have based this report on the sources detailed within this report, which are believed to be reliable. However, RSA Geotechnics Limited cannot and does not guarantee the authenticity or reliability of the third party information it has relied upon.

## **1.2 Legislative Background**

The legislative document regarding land contamination is the 1995 Environment Act. Forming Part 2A of the Environmental Protection Act of 1990, this act created the framework for the identification and remediation of contaminated land. It established the Environment Agency as the overall National Enforcement Agency, with regional control provided by the Local Authorities.

The Act defines “contaminated land” as any land which appears by the Local Authority to be “in such a condition, by reason of substances, in, on or under the land that:-

- significant harm is being caused or there is significant possibility of such harm being caused; or
- significant pollution of Controlled Waters is being caused, or there is significant possibility of such harm being caused.”

In relation to regulatory intervention (Part 2A) and 'voluntary' investigation (including redevelopment of sites which may be affected by contamination), the Model Procedures (CLR-11, Environment Agency 2004), provide a generic framework indicating key technical activities applicable in each of those contexts. The management of land contamination broadly comprises three components, which are identified as 'Risk Assessment', 'Options Appraisal' and 'Implementation'. These in turn determine if any unacceptable risks exist, ascertain the most appropriate remediation strategy for the site and demonstrate that the strategy will be effective.

In accordance with this and other current guidance, where a 'land quality' risk assessment is required each 'Relevant Pollutant Linkage' (formerly referred to as 'source-pathway-receptor' framework), is separately identified and a level of risk attached. The risk assessment takes account of the local environment, end user behaviour patterns and the nature of the development in relation to proven 'unacceptable' risk. This is the approach supported by current guidance and therefore has been adopted in the assessment of this site.

The guidance requires a Phase 1 investigation or desk study to be undertaken as the first stage of the risk assessment. This derives potential sources, pathways and receptors for the site taking into account the proposed end use. It results in the generation of potential pollutant linkages which are documented in the form of an 'Outline Conceptual Model'. This is then used to direct and target a Phase 2 or intrusive investigation, if deemed necessary.

The outcome of the intrusive investigation and subsequent 'land quality' risk assessment is the establishment of plausible relevant pollutant linkages shown in the form of a 'Refined Conceptual Model'. This is then used to determine the need for further investigation, or remediation to appropriately mitigate any determined unacceptable risks.

In accordance with the Model Procedures and Regulatory preference, detailed remedial measures should be provided in a separate report to the investigation and risk assessment generally referred to as a Remediation Method Statement (RMS).

## **2. DESK STUDY**

### **2.1 Site Location**

The site is located at 156 West End Lane in West Hampstead in the London Borough of Camden. There are several public transport services in the vicinity of the site, including West Hampstead Overground, 100m to the south west of site and Underground services, which provide direct access to the Jubilee Line, Thameslink and Overground services. The north west to south east trending A41 (Finchley Road) is approximately 500 m north east of the site. The site can be approximately located by National Grid Reference TQ 256 848.

### **2.2 Site Description**

The site is rectangular in shape and has a site area of 0.64 ha and dimensions measuring approximately 150 m east to west and 50 m north to south at its widest points. The site is bounded to the south by Thameslink railway line, to the east by a Multi-Use Games Area (MUGA), and to the north by the rear gardens of housing fronting onto Lymington Road and to the west by the north to south trending West End Lane.

A reconnaissance site visit was completed by an experienced RSA Geotechnics Limited Engineer on 18 April 2015 and described the site as follows:-

The building which fronts on to West End Lane is a five-storey building, with vacant Council offices on the upper floors (Figures 1, 2 and 3). The ground floor has a retail

showroom and builders' merchants and storage yard (Figures 1 and 2). An electrical sub-station is located within the north western corner of the main building at ground floor level, accessible from West End Lane (Figure 4) and displaying 'UK Power Networks' signage.

Figure 1: Ground floor Wickes showroom with offices above. Viewing ~ NE

Figure 2: Ground floor Wickes and above office space. Viewing ~ NW

Figure 3: 'Northern' Council Offices of the site. Viewing ~ SE

Figure 4: Electrical Substation located in the north western corner of the site, within the 'northern' Council office buildings. Viewing ~ E

Satellite imagery and observation from the site plan showed an open square courtyard in the north eastern area of the site between the Council offices and a single storey section connects the Wickes showroom and the Travis Perkins Hire Centre. A small walkway (Figure 5), metal storage cage and rubbish bin storage area (Figure 6) is present in between the Wickes showroom and the Travis Perkins offices.

Figure 5: Walkway around the metal storage cage adjacent to the single storey section. Viewing ~ W

Figure 6: Metal storage cage and waste bin storage area

An access road to the builders' yard from West End Lane is present along the south western boundary of the site, to the north of a car park area and public footpath (Figure 7), located on a floating deck adjacent to Platform 1 of the West Hampstead Thameslink station (Figures 8 and 9).

Figure 7: Car Park area and public footpath adjacent to southern boundary. Viewing ~ NE

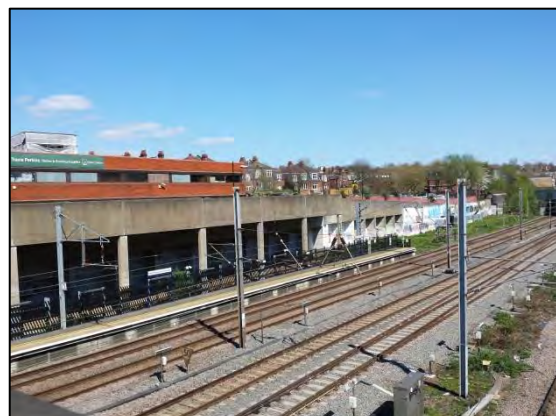

Figure 8: Extent of floating deck along the length of the southern boundary of the site. Viewing ~ NE

Figure 9: Concrete columns and land underneath the floating deck adjacent to Platform 1. Viewing ~ NE

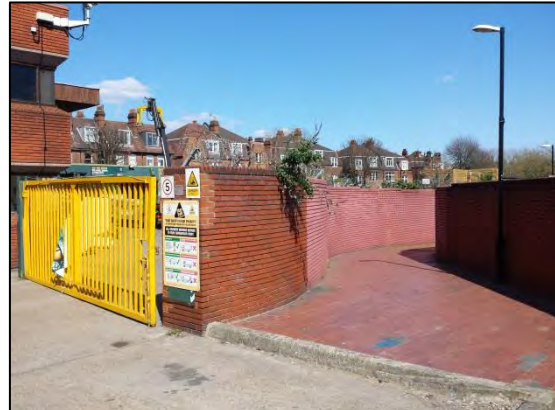

Figure 10: 'Potteries Path' footpath which formed the southern boundary of the site and metal security gate. Viewing ~ NE

An approximately west to east trending public footpath, named 'Potteries Path,' forms the southern boundary with the railway line (Figure 10). The path is walled and paved with red brick. A yellow metal security gate for the Travis Perkins yard is also present adjacent to the path (Figure 10). The path extends the full length of the southern site boundary, lowering in level (Figure 11) and linking to a public park adjacent to the eastern site boundary, which consists of a stepped brick wall at the rear of a small flexibly surfaced multipurpose sports court (Figure 12), with a grassed play area further to the east.

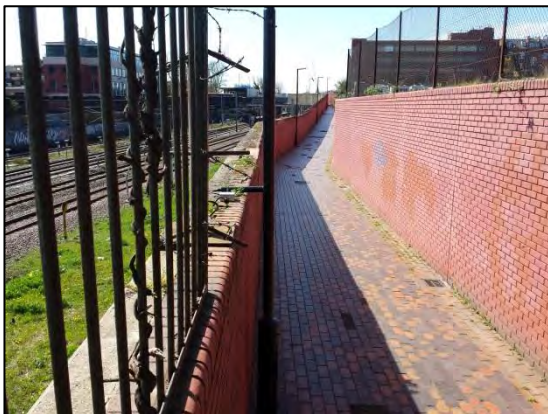

Figure 11: 'Potteries Path' footpath, extending the length of the southern boundary, visible change in level of the path. Viewing ~ W

Figure 12: Red brick wall which formed the eastern site boundary, viewed from the off-site sports court. Viewing ~ NW

The northern boundary of the site is formed by a high brick wall, (Figure 13), which also forms the boundary wall of the rear gardens of the housing which fronts onto Lymington Road, approximately 30 m north of the site.

Figure 13: Northern boundary wall visible to the south of existing properties which front onto Lymington Road. Viewing ~ NE

Figure 14: Significant visible growth of ivy and buddleia on the northern and eastern boundary walls in the north eastern corner of the site. Viewing ~ NE

The Travis Perkins offices, showroom, and builders' yard are currently located off-centre, on the eastern half of the site. The offices and showroom are located on the ground floor of a two storey building (Figures 15 and 16).

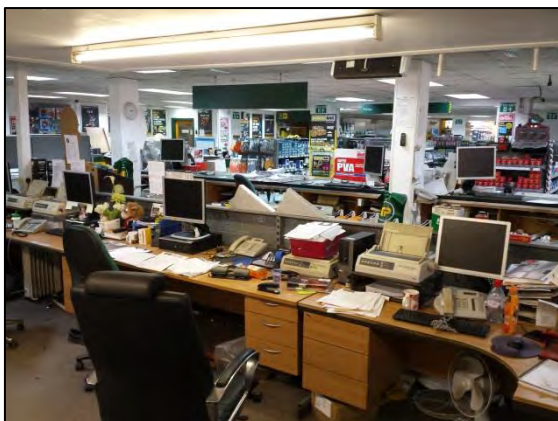

Figure 15: Office space in the Travis Perkins showroom area

Figure 16: Travis Perkins Showroom with range of general construction supplies

A small plant hire storage and maintenance room is located in the north eastern corner of the showroom, adjacent to the warehouse (Figures 17 and 18). Various small power tools including drills, vibrating hammers and the mobile transformers were present in this area.

Figure 17: Range of small plant and power tools within the storage room

Figure 18: Small plant maintenance bench

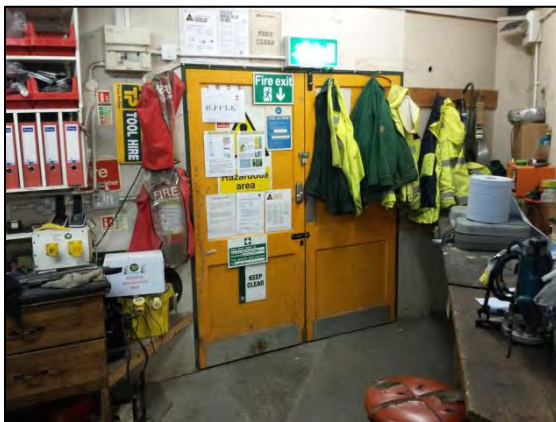

Figure 19: Set of double doors leading to the stairwell and roller shutter accessing the second floor storage area

Figure 20: Roller shutters visible from the yard. Viewing ~ NW

The second floor over the Travis Perkins showroom and offices is used for building material and stock storage. Access is via a set of double doors from the small plant store room (Figure 19) and via a roller shutter door from the yard (Figure 20).

Access to the Wickes showroom (Figure 21) and the Travis Perkins warehouse (Figure 22), is available from the Travis Perkins showroom.

Figure 21: Access to the Wickes showroom through the single storey connecting building. Viewing ~ W

Figure 22: Access to the Travis Perkins warehouse. Viewing ~ N

The Travis Perkins warehouse is double height with large steel structure beams, a metal sheet roof and concrete slab floor (Figure 23). It is currently being used to store a range of building supplies such as plasterboard, timber, metal fittings and cement (Figures 23 and 24). A roller shutter door is present on the eastern wall to allow access to the Travis Perkins yard (Figure 24). The Northern wall is composed of mass concrete.

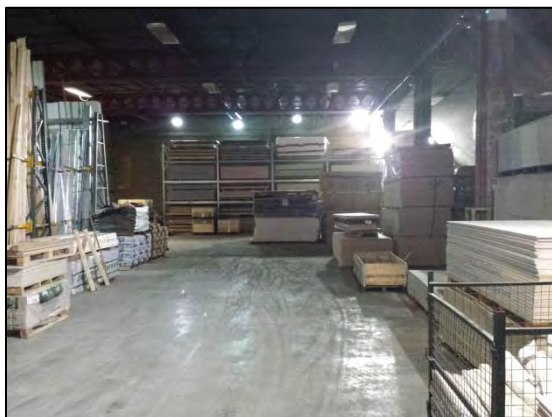

Figure 23: Travis Perkins Warehouse, - storage for a range of construction materials

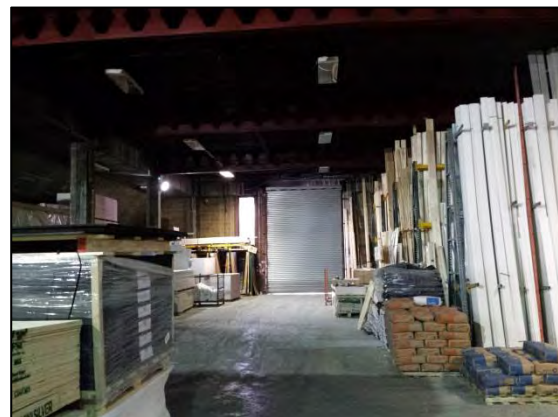

Figure 24: Storage area and roller shutter providing access to the yard

A staff area, with staffroom, kitchen, toilets and offices is located along the southern wall of the showroom building (Figures 25, 26, 27 and 28 respectively) off a single corridor. This is accessible by a staff door, adjacent to a third roller shuttered entrance to the Travis Perkins showroom from the yard area (Figure 29).

Figure 25: Staff room

Figure 26: Kitchen area

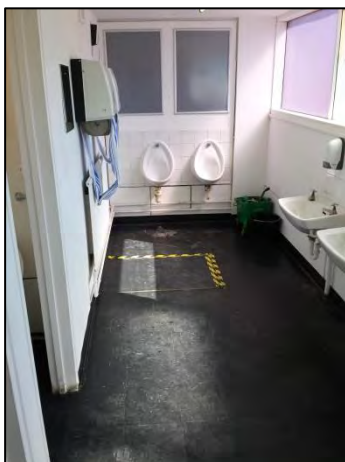

Figure 27: Toilets

Figure 28: Separate office area

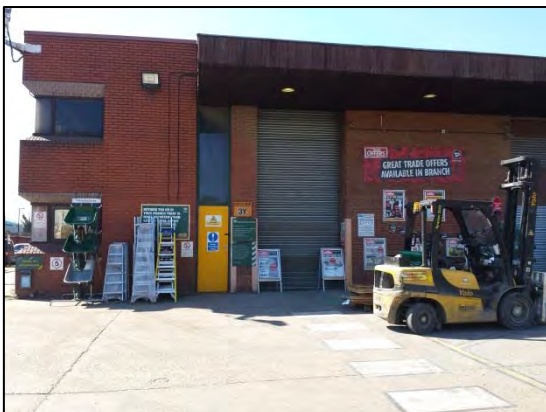

Figure 29: Yellow Staff door and roller shuttered entrance to the Travis Perkins showroom

The remainder of the site is occupied by the flexibly surfaced Travis Perkins builders' yard. A small extension to the warehouse building is present in the north western corner of the yard adjacent to a single storey metal framed building (Figure 30). The extension has signage detailing this area as a 'Hazchem 3Y', 'Oily waste' and 'Fluorescent tubes' storage area (Figure 31).

Figure 30: Red brick extension to the warehouse with adjacent metal structure. Viewing ~ NW

Figure 32: Metal framed and clad structure used as a hired plant store. Viewing ~ NW

Figure 33: Hired Plant Storage (concrete/cement mixers, vibrating plates, etc.) Viewing ~ W

The adjacent single storey metal framed structure (Figure 32) is being used as a storage area for hire equipment (Figure 33) and also contains a plant wash rack (Figure 34).

Figure 34: Plant wash rack within metal structure. Viewing ~ N

Figure 35: Timber storage along the northern boundary of site. Viewing ~ NE

Five metal framed timber storage racks are present along the northern boundary of the site (Figure 35). In the north eastern corner of the site is a securely fenced scaffold storage area (Figure 36) and metal LPG/gas bottle cage (Figure 37).

Figure 36: Metal fenced scaffold storage area. Viewing ~ N

Figure 37: Metal LPG/gas bottle cage. Viewing ~ NE

A storage area for blocks and bricks is present along the eastern boundary and extends into the south eastern corner of the site (Figures 38 and 39).

Figure 38: Storage area for block and bricks.  
Viewing ~ E

Figure 39: Storage for more bricks and blocks  
extending to the south eastern corner of the site,  
viewing ~ SE

A 2500 litre Titan 'Ecosafe' plastic double banded diesel tank is currently present in the south eastern corner of the site (Figures 40 and 41). Visible hydrocarbon staining is present at the base and the tank itself is located close to a surface drain (Figure 40).

Figure 40: 2500L Diesel storage tank in south  
eastern corner of the site, visible staining at  
base. Viewing ~SE

Figure 41: Details of the capacity, make and  
design of the Diesel tank.

Another storage area which included paving slabs (Figure 42), sand and aggregates (Figure 43), wooden fencing (Figure 44) and two of pallettes of cement (Figure 45) are located adjacent to the southern boundary wall with the Potteries Path.

Figure 42: Metal storage rack for paving slabs.

parking area. Viewing ~ W

Figure 47: Forklift storage/parking area adjacent  
to main building. Viewing ~ NW

### **2.3 Sources of Information**

Historical Ordnance Survey maps and data from a search of Public Registers were obtained from the Landmark Information Group Limited using their Envirocheck product (reference number 66479009\_1\_1). This included information from organisations such as the Environment Agency, Local Authority, British Geological Survey, Natural England and others. The data included a range of historic and modern Ordnance Survey maps sourced mainly at, 1:1,250, 1:2,500, 1:10,000, 1:10,560 and 1:25,000 scales.

Geological and hydrogeological data and information regarding likely ground conditions was obtained from the library archive records of RSA Geotechnics.

It should be noted that the following text does not generally consider features beyond a search radius of 250 m, since based on their distance from the site, a risk from these features was not identified. However, for further details outside this 250 m radius a full list is given in Appendix 1.

### **2.4 Site History**

The oldest two maps that showed the site in some detail were from 1871 at 1:2,500 scale and 1873 to 1874 at 1:10,560 scale.

In 1871 the site was listed as being an open field, with the majority of the site located within Land Parcel 365. The site was bounded to the west by a roughly

north to south trending road with a few deciduous trees along the boundary. The southern boundary was formed by an embankment associated with the off-site, roughly west to east trending railway. The northern and eastern boundaries were undefined, however a roughly north west to south east orientated hedgerow and track dissected the north eastern corner of the site between Land Parcels 365 and 364.

The site was located on the southern outskirts of a small area of developed land associated with several large houses and lodges including Western Hall, Lauristone Lodge, Sandwell House, Canterbury House and Trehorne House.

This small area of developed land was named 'West End' and was located to the south west of Hampstead and to the north east of what appeared to be the main urbanised area of London. Finchley Road Station was located within 500 m of the site, otherwise the general area (within 1 km of the site) was predominantly open fields (to the south east and south west).

Table 2.4 summarises the historical changes noted on and around site since 1874, based upon the Ordnance Survey maps:-

<b>Table 2.4 - Summary of Site History</b>		
<b>Date</b>	<b>On Site</b>	<b>Surrounding Area</b>
1875-1896	By 1896 the northern boundary of the site had been formed by a field boundary. A second field boundary, trending approximately north to south separated the site into an eastern and western half. West End Station constructed 100 m west of the site.	General urbanisation of London expanded to this area. London Tube network extension (Metropolitan Railway) noted within 150 m of the site and West End Lane Station constructed approximately 100 m south east of the site and West Hampstead Station 200 m south.
1897-1920	By 1915, the site had been separated into four areas, with two undeveloped in the central area of the site. Several buildings were constructed on the most western area, fronting onto West End Lane. Two smaller buildings were constructed within the eastern most area of the site. Railway sidings on part of the southern edge of the site had been extended, and further embankment works covered the southern boundary by 1935.	Continued urbanisation of the areas around the site, in all directions. All large houses noted pre-1896 had been demolished and replaced by rows of terraced housing and associated infrastructure on Lymington Road. A railway depot with sidings was noted to be present approximately 50 to 100 m east of the site. The majority of land within 1 km of the site was urbanised by 1920 with the exception of a cricket/sports ground located 100 m north east of the site and an area of allotment gardens located 100 m south east of the site.
1921-1954	The site was still split into four areas in 1934, the central two areas were noted to be tennis courts and the eastern area was partially covered by a tennis court and a separate building. The westernmost area has multiple buildings present, and an additional 'Hall' in the north western corner of the site. Aerial photography from 1946 showed further development of two large warehouse buildings on the western most area of the site. The rest of the site appears to be grassed or possibly allotment areas. A single building was still present near the eastern boundary. By 1951, the large 'warehouse' buildings noted as a 'garage' and the easternmost building had been demolished	A 'Cocoa Factory' and a 'Canadian Building' were noted to be present approximately 120 m south east of the site. Between 1920 and 1951 several works sites were listed within 100 m of the site, including 'Exhibition and Display works', and 'Tower Royal works'. Tower Royal works was constructed on the Tennis Courts between 1951 and 1954. Corporation Yard present 100 m east of the site to the south of a large sports ground.

<b>Table 2.4 - Summary of Site History Continued</b>		
<b>Date</b>	<b>On Site</b>	<b>Surrounding Area</b>
1955-1974	No significant changes had occurred on site with regards to the buildings themselves. The Garage building was listed as a 'Depot' by 1974. Canterbury Mansions shown to north of site.	Continued urbanisation and regeneration of the area. Several 'Depots' and works still located within 250 m of the site.
1975-1984	Demolition of the buildings fronting onto West End Lane and redevelopment of the western area of the site, inclusive of the area noted to have been part of the railway embankment and sidings. Building footprint appears to show a large irregularly shaped main building with several other smaller, associated buildings. Eastern half of the site appears to remain undeveloped.	Further developments of 'Depots' within 250 m of the site including a 'G P O Depot', otherwise no significant changes were noted within the general area.
1985-1994	Minor development of a smaller building adjacent to the northern boundary of the site.	No significant changes noted other than general redevelopment of the area approximately 150 m south east of the site, from depots to works.
1995-Present Day	No significant changes noted on site, building footprint remains the same. Eastern area of the site noted to be a general building materials storage and parking area	No significant changes noted other than general redevelopment of the surrounding area.

## 2.5 Unexploded Ordinance (UXO)

According to the 1945 London Bomb Maps one building 150 m to the north west of the site was damaged beyond repair and building locations between 150 m and 200 m sustained minor blast damage during WWII.

The online WWII bomb census website, Bombsite.org, also shows four 'High-Explosive' bombs were dropped within 150 m of the site to the south east.

## **2.6 Public Register Data**

Public Register data was received as part of the Envirocheck Report. This included information from the Environment Agency, Local Authority, British Geological Survey, Natural England and several other sources. A full list of the Public Register entries within a 1 km radius of the site can be found in Appendix 1 of this report. It should be noted that the positions of symbols on the environment map supplied are not always very accurate and that judgement should be used in locating each item. The environmental information is summarised below.

### **2.6.1 Statutory Authorisations**

Two Local Authority Pollution Prevention and Controls were located within 250 m of the site. One located approximately 27 m west of the site, was listed as 'Madame George Dry Cleaners', described as 'permitted' and as 'PG6/46 Dry cleaning'. The second listing was approximately 157 m north west of the site relating to a 'Shamrock Express Cleaners', described as 'permitted' and as 'PG6/46 Dry cleaning'.

### **2.6.2 Waste**

A Registered Waste Transfer Site operated by the London Borough of Camden, was located at 152 West End Lane, Camden. The site was categorised as a 'Transfer' site, with very small input rate. The licence status was 'cancelled or surrendered'

and was dated August 1993. Authorised waste included 'asbestos and electrical capacitors and PCB fluids'.

### **2.6.3 Hazardous Substances**

No listings within this category were recorded within 1 km of the site.

### **2.6.4 Geology**

The BGS online viewer and BGS Survey Sheet 256 'North London' Bedrock and Superficial, 2006, recorded that the site was underlain by the London Clay Formation with no superficial geology recorded. The BGS Survey Sheet also implied that an area of 'Head Propensity' was located to the north of the site, therefore there is a possibility that Head Deposits are present beneath the site, overlying the London Clay Formation.

The closest historical borehole was located approximately 172 m west of the site (BGS borehole reference: TQ28SE46). This borehole confirms the anticipated geology and showed the London Clay to be in excess of 65 m thick in the district.

Potential hazards associated with the geology of the site as given in the Envirocheck report have been summarised in Table 2.6.4A:-

**Table 2.6.4A - Summary of Geological Hazards**

<b>Type of Ground Stability</b>	<b>Hazard Potential on Site</b>
Collapsible Ground	Very low
Compressible Ground	No hazard
Ground Dissolution	No hazard
Landslide	Very low
Running Sand	No hazard
Shrinking or Swelling Clay	Moderate

The site was 'in an area that might not be affected by coal mining', and a "No hazard' risk was noted for 'Non Coal Mining Areas of Great Britain'.

It was stated that less than 1% of homes were above the Health Protection Agency Action Level for radon and the British Geological Survey National Geoscience Information Services advised that no radon protective measures were considered necessary in the construction of new dwellings or extensions.

Estimated Soil Chemistry data for the site and surrounding area was provided by the BGS for arsenic, cadmium, chromium, lead and nickel, which indicated ambient levels of these elements as shown in Table 2.6.4B.

**Table 2.6.4B - Estimated BGS Urban Soil Average Concentrations**

<b>Determinand</b>	<b>Average Background Concentration (mg/kg)</b>
Arsenic	17
Cadmium	0.9
Chromium	79
Lead	280
Nickel	28

## 2.6.5 Hydrology and Hydrogeology

No listing was provided for the nearest surface water feature and no water abstractions were listed within 1000 m of the site. Groundwater Vulnerability Sheet 39 'West London' detailed the soils on site as 'not classified', due to the fact that the 'Bedrock Aquifer Designation' was listed as 'Unproductive Strata' associated with the London Clay Formation. The site was not located within an area at risk from flooding from rivers or sea, with or without defences and the site, and the surrounding area was not located within a groundwater Source Protection Zone (SPZ).

## 2.6.6 Industrial Land Use

A total of forty nine Contemporary Trade Directories were located within 250 m of the site and are summarised in Table 2.6.6:-

**Table 2.6.6 - Summary of Contemporary Trade Directories within 250 m of the Site**

Directory Classification	Distances from Site (m)					
	On-site	1 - 49	50 - 99	100-149	150 - 199	200 - 250
Active	1	4	2	3	4	4
Inactive	0	4	3	12	2	4

The Contemporary Trade Directory listing on site was recorded to Travis Perkins Trading Company Limited, classified as a 'builders merchants'.

The six active Contemporary Trade Directories entries within 100 m of the site were listed to:-

- Colour Division - Printers
- Madam George Dry Cleaners
- Central Pharmacy
- Mellau – Carpets and Rug Manufacturers
- The Clockwork Factory - Catering Equipment
- A A A Cleaning – Laundries and Laundrette.

Other active directories within 250 m include Floorcovering manufacturers and wholesalers, car body repairs, commercial vehicle dealers, oil and gas exploration supplies and services, joinery and tyre dealers.

No fuel station entries were listed within 250 m of the site.

### **2.6.7 Sensitive Land Use**

No listings within this category were located within 100 m of the site.

## **2.7 Conclusion to Desk Study**

The planning application proposes the “Demolition of all existing buildings and redevelopment of the site to provide 164 mixed-tenure homes (Use Class C3), new floor space for town centre uses (Use Classes A1, A2, A3, D1 or D2), new

employment floor space (including four dedicated units for start-up businesses) (Use Class B1), a community meeting room and new and improved public open spaces, together with associated new landscaping, on-site access, servicing and disabled car parking”.

The site was first developed between 1896 and 1915, and was noted to have a garage building fronting onto West End Lane between 1935 and 1946. The eastern half of the site was relatively undeveloped with the exception of tennis courts and associated small buildings. The buildings on site were designated a depot by 1974 and it is thought that the current buildings on site were constructed between 1975 and 1984. Minor building footprint changes occurred between 1984 and the present day.

The surrounding area was urbanised before 1915 and a reasonable amount of industrial activity including factories and works, were present near the site, most likely due to the proximity of the railway lines, which bound the site to the south and are also present 100 and 200 m south of the site.

The desk study and environmental reconnaissance investigation identified multiple potential sources of contamination predominantly related to the historical and contemporary use of the site.

### **3. PRELIMINARY RISK ASSESSMENT**

#### **3.1 Introduction**

A conceptual model represents the characteristics of the site that show the possible relationship between sources (contaminants), pathways and receptors (or targets).

The following outline conceptual model has been based on the results of the desk study, and an environmental reconnaissance of the site.

#### **3.2 Outline Conceptual Model**

The planning application proposes the “Demolition of all existing buildings and redevelopment of the site to provide 164 mixed-tenure homes (Use Class C3), new floor space for town centre uses (Use Classes A1, A2, A3, D1 or D2), new employment floor space (including four dedicated units for start-up businesses) (Use Class B1), a community meeting room and new and improved public open spaces, together with associated new landscaping, on-site access, servicing and disabled car parking”.

In order to classify the anticipated risk associated with potential sources of contamination identified on the site the classification system in Table 3.2 has been adopted.

**Table 3.2 - Risk Classification System**

<b>Term</b>	<b>Description</b>
Very high risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard at the site without appropriate remedial action.
High risk	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remedial action.
Moderate risk	It is possible that without appropriate remedial action harm could arise to a designated receptor but it is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild.
Low risk	It is possible that harm could arise to a designated receptor from an identified hazard but is likely that at worst, this harm if realised would normally be mild.
Negligible risk	The presence of an identified hazard does not give rise to the potential to cause significant harm to a designated receptor.

### **3.2.1 Potential Sources**

The potential sources of contamination identified for the site and their anticipated level of risk have been summarised below:-

- Historical made ground relating to general site redevelopment (Moderate)
- Ground gas/vapour from historical made ground on site (Moderate)

- Above ground fuel storage tank (Moderate)
- Potential for asbestos containing materials (ACM) within the existing construction (Moderate)
- General industrial activities on-site both historical and contemporary, inclusive of general plant and vehicular storage and movement, wash down area and hazardous chemical storage (Low - Moderate)
- Electrical Substation (Low)
- Unexploded ordnance (UXO) risk from location of site in relation to WWII bombing (Low-Moderate)
- Proximity of off-site railway sidings and embankments (Low)
- Elevated sulphate and acidity levels in the London Clay (Low).

### **3.2.2 Potential Pathways**

The potential pathways associated within the identified potential sources on site include:-

- Direct contact
- Ingestion
- Inhalation
- Leaching and/or migration via groundwater and/or permeable soils
- Plant uptake.

### **3.2.3 Potential Receptors**

The potential receptors associated with the identified potential sources and pathways include:-

- End users
- Groundworkers and construction workers
- Off-site receptors
- Controlled Waters
- Building materials
- Vegetation.

### **3.2.4 Possible Pollutant Linkages**

Table 3.2.4 summarises the potential relevant pollution linkages (source-pathway-receptor) associated with the site:-

**Table 3.2.4 - Possible Relevant Pollutant Linkages**

Source	Contaminants	Pathway	Receptor
Made ground	Hydrocarbons, (TPH, PAH), Heavy metals, VOC, SVOC	Direct contact	End users
		Ingestion	Groundworkers
		Inhalation	Off-site receptors
		Leaching and migration via groundwater	Controlled Waters Off-site receptors
	Asbestos	Direct contact	Building materials
		Plant uptake	Vegetation
		Inhalation of fibres	End users Groundworkers Off-site receptors
Ground gas	Inhalation	End users Groundworkers	
Acidity and sulphate	Direct contact	Building materials	
Above ground storage tanks	Hydrocarbons (TPH)	Direct contact	End users
		Ingestion	Groundworkers
		Inhalation	Off-site receptors
		Direct contact	Building materials
		Inhalation of vapours	End users Groundworkers
		Migration via groundwater	Controlled Waters
Existing buildings	Asbestos	Inhalation of fibres	End users
			Groundworkers
			Off-site receptors
Historical and contemporary industrial use including vehicle usage, wash down area and hazardous chemical storage	Hydrocarbons, (TPH, PAH), Heavy metals, VOC, SVOC	Direct contact	End users
		Ingestion	Groundworkers
		Inhalation	Off-site receptors
		Direct contact	Building materials
		Leaching and migration via groundwater	Controlled Waters Off-site receptors

<b>Table 3.2.4 - Possible Relevant Pollutant Linkages Continued</b>			
<b>Source</b>	<b>Contaminants</b>	<b>Pathway</b>	<b>Receptor</b>
Electricity substation	PCB, hydrocarbons	Direct contact	End users
		Ingestion	Groundworkers
		Inhalation	Off-site receptors during construction
		Direct contact	Building materials
		Inhalation of vapours	End users
		Migration via groundwater	Groundworkers
			Controlled Waters
Unexploded ordnance	Heavy Metals, Explosives	Direct contact	Groundworkers
			Off-site receptors
Off-site Railway	Heavy metals, Hydrocarbons (TPH), Creosote	Direct contact, Ingestion, Inhalation	End users
			Groundworkers
		Direct contact	Building materials
		Leaching and migration via groundwater	Controlled Waters
		Plant uptake	Off-site receptors
			Vegetation
London Clay	Acidity and sulphate	Direct contact	Building materials

### 3.3 Recommendations

The site reconnaissance visit and desk study have identified some potential on- and off-site sources of contamination, including the potential for made ground to underlie the site. Therefore, an intrusive Phase II ground investigation is recommended to assess the level of risk posed by these identified pollutant linkage pathways.

The intrusive investigation should include a number of exploratory holes positioned both to provide reasonable coverage of the site area and to target identified potential contaminative sources, to assess ground conditions and recover samples for analysis.

It is recommended that before intrusive investigations commence on site, a detailed UXO risk assessment of the site is completed if necessary to determine the risk posed by the potential for UXO to be present on site and whether the presence of an EOD engineer is required during the intrusive investigation and subsequent construction period.

The exploratory holes could take the form of a series of light cable percussion and small diameter window sample boreholes. Representative soil, and potentially groundwater, samples would be obtained during the intrusive works to enable a range of geoenvironmental and geotechnical tests to be carried out, and the results interpreted. It is recommended that combined groundwater and ground gas monitoring wells be installed in at least three exploratory holes.

Geotechnical aspects of the scheme will also need to be considered, and various other intrusive tests could be completed during the intrusive investigation, such as dynamic probing, dynamic cone penetrometer tests and soakage tests. These tests would provide further information for use in geotechnical design of foundations, access roads and areas of hardstanding and soakaways.

It is thought that the proposed development would be likely to adopt a piled foundation solution. Therefore cable percussion boreholes should be undertaken to at least 20 m depth to determine the deeper ground conditions, and enable consideration of a piled foundation solution.

Selected soil and groundwater samples collected from the investigation would be submitted for chemical analyses, the nature of which would be determined by the location the samples were collected from, associated anticipated contaminants, and from visual inspection and initial screening of the soil samples. The analytical results would be assessed using screening values derived using current guidance to determine if the historical and current uses of the site and nearby surrounding area have impacted the underlying soils, and if the impacted soils pose an unacceptable risk to end users of the development, Controlled Waters and other identified receptors.

Ground gas monitoring should be undertaken to assess the gassing regime for the site from the potential sources, as identified by the desk study. Monitoring wells should be installed in at least three of the window sample boreholes and a minimum of four gas monitoring visits undertaken during periods of varying atmospheric pressure, ideally during periods of low or falling pressure. The number of monitoring wells and the total number of monitoring visits may need to be increased depending on the extent of any made ground. It is recommended that the requirement for further wells is assessed on site and the requirement for additional monitoring is assessed following the initial three visits.

It is recommended that a full asbestos register of the existing commercial buildings is obtained from the current site owners, so any asbestos containing materials can be identified prior to demolition. If the Register cannot be obtained it is recommended that a full Demolition Asbestos Survey be carried out. Any identified ACM would need to be considered by a suitably experienced specialist and

appropriately removed prior to demolition. Copies of all waste transfer documents relating to the removal of ACM should be kept on file for inspection at the end of the project.

The results of the ground investigation should be provided in an interpretative report, which would include details of the ground conditions encountered, an assessment of the geotechnical aspects of the proposed development with recommendations for foundation design, including in-situ and laboratory testing. The report would also include the analytical results of the contamination testing carried out and a detailed risk assessment including a refined conceptual model and remedial recommendations or recommendations for further actions, if required. The report will be suitable for submission to the Local Authority and the Environment Agency, to inform planning considerations.

## 4. CONCLUSIONS

The desk study has identified that the site in its current condition could pose a potential risk to identified site receptors. Therefore, recommendations have been made for an intrusive geoenvironmental and geotechnical ground investigation to assess the site in terms of the proposed development.

The building's asbestos register should be inspected to identify any asbestos containing materials, which will need to be suitable dealt with prior to demolition. If the asbestos register cannot be obtained it is recommended that a full Refurbishment and Demolition Asbestos Survey be carried out.

Advice and recommendations given in this report have been based on the site reconnaissance, the findings of the Landmark Envirocheck Report and a review of publicly available records and maps. No intrusive investigation was carried out as part of this report.

## Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

## Envirocheck<sup>®</sup> Report:

### BGS Boreholes Datasheet

#### Order Details:

**Order Number:**

66479009\_1\_1

**Customer Reference:**

14152DS\_IJS

**National Grid Reference:**

525600, 184870

**Slice:**

A

**Site Area (Ha):**

0.65

**Borehole Search Buffer (m):**

1000

#### Site Details:

156 West End Lane

West Hampstead

LONDON

NW6 1UF

#### Client Details:

Mr I Stobbs

RSA Geotechnics Ltd

Ashburnham House

1 Maitland Road

Lion Barn Estate

Needham Market

Suffolk

IP6 8NZ

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m
BGS Boreholes	pg 1	None	4	12	56

## Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.

For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
