The Purpose of this Document

This document has been prepared on behalf of Theatre Tracks Limited for the extension to their existing planning application (number 2014/6593/P) for a temporary theatre venue, which provides a venue for a theatrical production of The Railway Children and potential other shows. The purpose is to describe the carbon reduction measures which will be employed by the applicant and their contractors for the structures which are located at Zone A, Goods Way, King's Cross Central, London N1C 4UR and to extend the current planning application by twenty four months to the end of January 2018.

This statement forms part of the application for planning permission for these facilities.

Description

The King's Cross Theatre is a temporary theatre and event venue situated within Zone A, Goods Way, King's Cross Central, London N1C 4UR.

Carbon Reduction Measures

The measures we are taking to reduce carbon emissions on this project include the avoidance of unnecessary journeys, prohibiting internal UK flights and single occupant car journeys.

- We plan for the tent, seating and other all items to be moved in artic journeys rather than multiple small vehicle journeys.
- We are seeking to use mains electricity for the site.
- We have halved the power use of the main power consuming equipment on site (where required) by specifying 500 watt halogen stage lighting.
- We will source all other suppliers using a preference for those with a carbon emissions reduction policy.
- We expect to incorporate further carbon emissions reducing elements into the project.
- The material imported to create the level base will be re-used on the site for the new build substructures and foundations, as well as the piling mats for the rigs. This will reduce the number of lorry movements to and from the site ultimately, as well as reducing the carbon footprint by re-using materials.
