2015/2704/P	Rahima Begum	27 Coopers Lane	20/01/2016 17:44:14	OBJ	I live in 27 Coopers Lane and will be affected by loss of daylight. My husband is disabled - in a wheelchair and at home a lot. Daylight is very important to him. He only gets outside with a carer. At the moment there is park behind our home but the new buildings will overlook us as well as taking daylight. Sometimes we use the park to sit in in the summer. Now the park will have buildings on it and is likely to be noisy.
2015/2704/P	K Malewska	2 Penryn street	21/01/2016 19:45:32	OBJ	<p>I would like to object to the building of the tower proposed for the green space on purchase street. I understand that the council feels it necessary to build to cover the cost for the rebuild of the school. However I feel the buildings you are already proposing should more than cover the cost of the school rebuild. By building the tower you forever change the use age of the park to a walkway/entrance for the flats - by replacing the green land taken with repurposing current pavement areas is an insult to the residents and more importantly the children of the area. It also sets a precedent - what is to stop you building another tower in a few years and then another - there is nothing in the immediate area that is currently the same height as your proposed tower. Also as you are planner and developer in this project I feel that as a resident am powerless to object. I have attended meetings and forums and have felt in all occasions that you have already made your decision and this is just a formality.</p> <p>Also I feel this is a grand opportunity for you as a council to look at somerstown as a whole and instead of building add on buildings and taking a way green space you could replace outdated buildings which currently have a small footprint which can be extended upwards - somerstown is like a history of social housing - some which were well built have stood the test of time but others have not - it's a cop out to just build more and more and cram as much into the space for your gains it's a braver planner who looks at buildings merits and improves dated housing. the costs must be lower as foundations and utilities are already in place.</p> <p>There has to be an alternative to this tower !</p>
