| 2015/7047/P | Svetlana Sanschagrín | Flat 1 55 Frognal London nw36ya | 26/01/2016 10:38:59 | OBJ | The dome structure obstructs the light coming into the garden and into the master bedroom of Flat 1. I also have a concern about light nuisance from the dome's massive window that appears to have been built on the side facing residential flats on Frognal. This was not clearly shown on the original drawings. I would also like to raise a complain about the fact the structure has already built significantly taller in relation to the planning consent, and the approval for extra height is being sought retrospectively. I addressed this issue to Camden Planning in writing back in 2015, at the time the structure was still being built, and requested that the dome's height is measured (as it appeared visibly taller than what was outlined on the drawings). Unfortunately, I did not receive any responses from Camden. Please also consider the history of multiple resident objections to this planning applications made in 2014. |
