

SARNAFIL SELF ADHERED MEMBRANE

Sarnafil®

GOES ON IN NO TIME - NEW SELF ADHERED ROOFING MEMBRANE

INTRODUCTION

Sarnafil G 410 FSA is a self adhered hot air weldable roof membrane that combines all the traditional and proven advantages of a Sarnafil membrane with fast and easy installation thanks to a strong self adhered fixing attachment method.

Cutting installation times by up to 50 per cent with no need for the use of adhesives on site Sarnafil Self Adhered is the quick, simple solution for installers, specifiers and building owners.

Instant adhesion means time and money can be saved by all parties, with a quick turnaround and shorter times on site.

Sarnafil Self Adhered has been developed by Sika Sarnafil and incorporates all the performance criteria associated with a company that has been providing quality single ply roofing solutions for over 50 years.

The peel and stick application method of Sarnafil Self Adhered provides instant wind uplift resistance through the self adhesive backing.

This multi layer synthetic roofing membrane is a premium quality polyvinyl chloride (PVC) material with an inlay of glass non-woven for dimensional stability and self adhesive polyester fleece backing. The membrane contains ultraviolet light stabilisers which assist weathering in direct exposure and is flame retardant all in accordance with the Declaration of Performance and CE Mark to BS EN 13956.

Suitable for new construction and refurbishment projects on smooth substrates, Sarnafil Self Adhered is prepared with an uncoated welding edge to ensure that a strong welding seam is achieved in the overlap.

With no built in stress at the time of production the membrane is a dimensionally stable product.

EASY AND FAST INSTALLATION

Installation could not be simpler. Just a case of align, peel, stick and seal.

The membrane is rolled out and aligned then the release liner peeled off and using a brush or squeegee, to prevent blisters, the membrane is adhered to the substrate. To fully press down the membrane it is recommended that a water-filled or steel roller be used.

An appropriate primer must be used together with the recommended substrate material.

QUALITY FINISH

With its lacquer coated surface Sarnafil Self Adhered maintains its top quality aesthetic appearance for a long time and like all Sarnafil membranes comes with the company's industry leading guarantees.

BENEFITS FOR ALL

Speed of installation and cutting down the time needed on site is a major benefit for contractors, while the specifier will appreciate both the shorter time on the project and the robust guarantees as will building owners. The Sarnafil Self Adhered delivers for all.

SEAL OF APPROVAL

Prior to its launch the new self adhered roofing membrane was trialled with a number of contractors and found an enthusiastic response. The speed of installation and reduction of time on site to complete the project was noted by many during the field trials, as was the adhesion strength.

Installers also noted the easier application and advantage of not having to open, stir and apply adhesives on site.

"It's very fast to install, very good to weld - all in all a very good membrane and we will be using it more," Grey & Jarrett

"Fantastic, so quick and easy to lay and no waiting for adhesive to go off," Barclay Roofing.

TRUST SARNAFIL ROOFING

Sarnafil is the trusted roofing solution for buildings of all sizes and functions.

We were early pioneers of single ply waterproofing membranes in the 1960's, at the company's Sarnafil roofing facility in Switzerland. Since then, the performance and longevity of Sarnafil roofs has been demonstrated in millions of successful applications worldwide, in every conceivable climate. Many of the first Sarnafil installations are still providing reliable protection today - confirming Sarnafil's independent BBA certified life expectancy, in their opinion 'in excess of forty years'.

Long life expectancy contributes to lower whole life costs. Durability and low maintenance are two key factors in any whole life cost assessment. With their independent BBA certified 40* year life expectancy and minimal maintenance requirements, Sarnafil membranes consistently demonstrate a low whole life cost when calculated using the Whole Life Cost methodology.

*Independently assessed by the British Board of Agrément (BBA) to last in excess of 40 years, in their opinion.
