2015/7121/P	M. Mahmoudian/Morton	43 KCC	07/02/2016 23:26:43	COMMNT	<p>The Asbestos Survey Report which was conducted at the request of KCC Directors and the developer on 2010 and submitted on 2011 was not a part of building permit. KCC building is embedded with Asbestos according to the report. Therefore, removing one wall in each flat (48 flats), connecting two lifts through the ceiling of 8th floor going through roof which are embedded with Asbestos will release Asbestos fibre/dust into the air. Our flat is situated on the 8th floor and all our ceilings and walls are ARTEX which has asbestos. By removing chimneys and passing all wires, plumbing and connecting metal beams on the roof will result in the release of asbestos fibre/dust into the air and therefore, causes LOSS OF AIR QUALITY. Lifts are very close to our front door and asbestos dust will be everywhere. The asbestos dust/fibre will be released into the atmosphere on the carpets on common areas, lifts, walls and also to the neighbours close by when removing walls which are embedded with asbestos in order to connect balconies. This is very dangerous for vulnerable elderly people and children. My mother is disabled and housebound with full time care givers. Asbestos should be handled professionally and by a qualified firm. I would like to see asbestos removal specifically covered by this planning permission.</p> <p>Also, the developer is putting two bathrooms right above our flat which causes WET AREA OVER DRY AREA. The drainage pipes will be passing right above our bedrooms in order to connect to the main drainage. He is installing another subfloor over the pipes and drainage. Therefore, in case of blockage and leak the only access in future would be through our ceilings which are embedded with asbestos. In addition, the noise from the water and waste right above our bedrooms.</p> <p>Thank you.</p>
