Proposed View from Ground Floor Flat

The photographs on the left have been taken by the occupant of the ground floor flat, at the lounge doorway.

Taking into account the planners' concerns about lack of privacy and increased sense of enclosure due to the height of the existing boundary wall, we propose to lower the boundary wall by 380 mm and to raise the middle section by 300mm. Please see the proposed view on the right hand side. Not only would this increase the daylight penetration and decrease the sense of enclosure but would provide a consistency throughout the boundary wall. With these changes we believe this will address the neighbours'and planners' concerns.
