

03.02.2016 / PROPOSED
Southeast Elevation (a)

Ventilation "chimney" & dormer over stair for passive stack ventilation. Gable end & chimney form modelled on adjacent houses.

Roof ridge raised by 255 mm & internal floor levels adjusted to lessen excavation & improve the relationship between the ground floor & garden.

Attic level window repositioned at higher level to improve ventilation & simplify roof profile & structure

PROPOSED/APPROVED
ELEVATION COMPARISON

Gable end & chimney form typical of adjacent houses to the northeast of 15a Parliament Hill

Roof formed in pre-weathered natural grey zinc instead of a mixture of zinc & clay tile. Zinc throughout is a more singular & practical solution to the variable roof form. The grey tone matches adjacent slate roofs.

2 x no. 50 projecting hanging tile "step". Traditional & practical construction detail improves weathering & insulation. The step foregrounds the triangular gable end form & acts as a datum & head for windows.
