

Dear planners and tree officers,

2016/1159/T

David Walker is an architect and said that the *Betula utilis* tree roots were damaging his house.

The application does not mention this, but says that the tree has no safe useful life expectancy.

If this is true, then I cannot oppose its felling.

If you allow the felling, please ensure that it is replaced by a suitable slow-growing tree.

Many thanks,

Eileen Willmott
