

Access and Design Statement

The proposed modifications to the existing Listed Buildings Consent 2015/0645/L do not affect the historic characteristics of the listed building or the access and design statement submitted as part of that application. They are either owner's preferences such as materials used for flooring and sliding doors to the library for privacy or practical amendments such as the height of the door accessing the vault and level of the new approved porch floor. The proposed replacement of the unoriginal 4 rear metal windows with original sash types will enhance the appearance of the building and details will be submitted as in satisfaction of the condition imposed in the above consent.
