2016/1599/P	Mark Neal	Flat 56 30 Oval Road London NW1 7DE	20/04/2016 14:14:10 INT		<p>It seem that these are relatively small aerials next to the big satellite dishes already in this roof area, however they seem to be for spreading wi-fi to both the interchange and camden market, and I think that it should be questioned if this can impact the quality of domestic wi-fi in neighbouring homes, if this is a wide area booster for their wi-fi network, could it swamp and reduce domestic wi-fi quality? As it stands the wi-fi bandwidth is dominated and congested with interchange and camden market wi-fi. What is the impact on all sorts of neighbouring domestic radio receptions?</p>
