

#### PLANTING:

**Hedera Helix** is a climbing evergreen plant that has been chosen as it grows quickly and will quickly cover the wall in which it has been planted up in front of.

It is evergreen and grows throughout the year. The flowers are visited by a large variety of nectar-feeding insects and are very rich in nectar which is an important late autumn food source for bees and other insects. The berries can also be eaten by many species of birds. The foliage provides a dense evergreen shelter which is great for hibernating insects in the winter and nesting birds in spring/summer..

#### WIRE ROPE SYSTEM:

The wire rope is affixed to the wall with 300mm vertical and horizontal spacing's.

#### PLANTERS:

Positioned at the base of the 3261 mm wall. Material: Aluminium

Planter 1: Width: 1000 mm Height: 500 mm, Depth: 500 mm  
 Planter 2: Width: 1000 mm Height: 500 mm, Depth: 500 mm  
 Planter 3: Width: 1261 mm Height: 500 mm, Depth: 500 mm
