

VIEW POINT INTERPRETATION STRUCTURE

The interpretation panel is the width of the existing stone mosaic set in the floor.

The base structure is very simple and durable, possibly being made out of powder coated steel, or aluminium framework, supporting a slate, stone or aluminium panel.

The main panel is angled at 20 degrees and at a maximum height of 720mm to ensure legibility for wheel chair users and children.

The angle of the panel also helps to blend the overall structure into the landscape, ensuring that it is neither obtrusive, nor hazardous.
