Dear Chris

**BREEAM Pollution Credit 1-1: Insulant ODP and GWP**

Expanded polystyrene normally uses pentane as the blowing agent.

The release of pentane into the atmosphere causes neither Ozone Depletion or Global Warming, and pentane therefore has an Ozone Depletion Potential (ODP) and Global Warming Potential (GWP) of 0.

The use of pentane blown Expanded Polystyrene therefore achieves this BREEAM credit.

Yours sincerely
