

## **Waste Management Declaration for 69 Highgate High Street**

Dunedin Construction takes Waste Management controls seriously on all of our sites.

Targets: We target best practice results for our sites. We will look to generate waste in the region of 17 tonnes or less per 100m<sup>2</sup> upon new build only.

Good Practice:

- We will have waste management contractors involved from the start. These contractors will give us detailed reports of the waste.
- The above reports will be analysed by the project team and trends determined with process modified for better practice if required.
- Material will be separated where possible onsite.
- We aim to use at least 96% of material purchased for site. Leaving 4% waste overall.
- We will be aiming for 85% of waste or higher to be diverted from landfill.
- We will designate a re-use location(s) within the site.
- We continually communicate with our suppliers to ensure material is ordered to its potential efficiency of use.
- We will set recycling targets to contractors.
- All staff onsite will be trained to play their part in waste management.

Kind Regards  
Cameron Ogle
