Subject: Planning Application number 2016/1987/P

Dear Kristina Smith

I write to object to the planning application proposing the building of a roof terrace on the rear extension of number 14 Manley Street, NW1 8LT.

1. I live in small basement flat in the neighbouring house
2. There is no daylight study with the application, but the extension will tower over our small back yard/ garden, which provides the only source of light to our living room and our bed room. We will lose most of our already limited amount of direct sunlight and will lose a significant amount of daylight, making our tiny yard/ garden seem like the bottom of a well.
3. From the proposed roof terrace it will be possible to look directly into our bedroom, from very close quarters. I estimate that people on the roof terrace will be about five or six meters from my bed. This will be both intimidating and embarrassing.
4. The lightest part of our living room will also be overlooked
5. If you get few objections, this may be because citizens have been prevented from getting information about the application in two separate ways:
 - A) the notice enabling neighbours to know that the application has been submitted was not hung up or has been removed
 - B) your system has for some time not given access to planning applications; see the error message below.

I ask you in the strongest possible terms to refuse the application

Yours sincerely

Kristian Jensen
12A Manley Street
London NW1 8LT
