2016/2974/P	K Colin	St. Edmunds Terrace	23/06/2016 17:40:35	OBJEMPER	<p>This planning application does not detail the intended use of the current refuse building should the function of it move to other locations. This is of concern, since in the original application that was granted, it was stated that Camden waste management were fully consulted as regards to easy access for a refuse truck. At the time of this original application there were several objections related to the viability of a waste truck's ability to do a 3-point turn with such a narrow access. The reply's to these objections were that both waste management services and the fire safety authority had no issues. It is clear that these concerns were not properly addressed originally, since the freeholder wishes to move the refuse collecting points.</p> <p>Camden residents need to be assured that this application is not an excuse to merely convert the current refuse building into more housing at a later date, on a site which is already densely populated. This reassurance would be that a condition of planning being granted, stipulates that the current refuse building may not be extended or re-purposed without full planning consent. Our children will now effectively be playing next to a refuse store.</p>
