APPENDIX 4 OVERSHDAOWING TO GARDENS AND OPEN SPACES

1 EXECUTIVE SUMMARY

1.1 Overview

- 1.1.1 Right of Light Consulting has been commissioned by A2 Dominion Development Limited to undertake a daylight and sunlight study in connection with the development at 156 West End Lane, London NW6 1SD.
- 1.1.2 The development comprises of the demolition of all existing buildings and redevelopment of the site to provide 163 mixed-tenure homes (Use Class C3), new floorspace for town centre uses (Use Classes A1, A2, A3, D1 or D2), new employment floorspace (including four dedicated units for start-up businesses) (Use Class B1), a community meeting room and new and improved public open spaces, together with associated new landscaping, on-site access, servicing and disabled car parking.
- 1.1.3 The aim of the study is to check whether or not the proposed habitable rooms receive satisfactory levels of daylight and sunlight. This report supersedes the Daylight and Sunlight study dated 18 December 2015 and takes into account the changes to the proposed design. For the purpose of the amended design, we have worked closely with the architect to ensure that the proposed rooms will benefit from the best possible access to daylight and sunlight.
- 1.1.4 The study is based on the numerical tests laid down in the Building Research Establishment (BRE) guide 'Site Layout Planning for Daylight and Sunlight: a good practice guide' by P J Littlefair 2011.
- 1.1.5 Appendix 1 identifies the windows analysed in this study. The numerical test results (including all calculation workings) are provided in Appendix 2. No sky line contours are presented in Appendix 3.
- 1.1.6 The numerical results confirm that the proposed development design achieves a high level of compliance with the BRE recommendations. The majority of the proposed rooms meet or surpass the BRE numerical recommendations. Whilst a small number of rooms do not meet the recommendations, the results are not unusual in the context of an urban location.

1.1.7 It should be noted that the BRE Guidelines were written with a suburban context in mind and should be interpreted flexibly. The BRE Guidelines states “Note that numerical values given here are purely advisory. Different criteria may be used based on the requirements for daylighting in an area viewed against other site layout constraints. Following the above, we are of the opinion that the daylight and sunlight levels achieved by the proposal is justifiable.

2 INFORMATION SOURCES

3 METHODOLOGY OF THE STUDY

3.1 BRE Guide : Site Layout Planning for Daylight and Sunlight

- 3.1.1 The study is based on the numerical tests laid down in the Building Research Establishment (BRE) guide 'Site Layout Planning for Daylight and Sunlight: a good practice guide' by P J Littlefair 2011.
- 3.1.2 The standards set out in the BRE guide are intended to be used flexibly. In instances where there is a special requirement for daylight or sunlight, higher levels may be deemed necessary. In other situations, such as with urban developments, lower daylight and sunlight levels may be unavoidable. The following statement is quoted directly from the BRE guide:
- 3.1.3 "The guide is intended for building designers and their clients, consultants and planning officials. The advice given is not mandatory and this document should not be considered as an instrument of planning policy. Its aim is to help rather than constrain the designer. Although it gives numerical guidelines, these should be interpreted flexibly because natural lighting is only one of the many factors in site layout design."

3.2 Interior Daylighting

- 3.2.1 The interior daylighting recommendations set out in BRE guide are based on British Standard BS 8206 Part 2 and the Chartered Institute of Building Services Engineers Applications Manual on window design. Collectively, the guides set out three main criteria for interior daylighting. These are summarised as follows:
- 3.2.2 Test 1 Average Daylight Factor (df)
- 3.2.3 The Average Daylight Factor can be calculated using the following formula:

$$df = \frac{T A_w \theta}{A (1-R^2)} \%$$

Where

- T is the diffuse visible transmittance of the glazing (BRE standard of 0.68)
A_w is the net glazed area of the window (m²)
A is the total area of the room surfaces (m²)
R is their average reflectance
θ is the angle of visible sky in degrees

3.2.4 The Average Daylight Factor test is applied to habitable rooms within domestic properties. A kitchen is generally deemed to be a habitable room if it is large enough to accommodate a dining area. If the kitchen is small or if the property has a separate dining area then the accepted practice is to treat the kitchen as a non habitable room.

3.2.5 For the purpose of this study we have assumed BRE internal reflectance values pertaining to medium wooden floors, light painted walls and white painted ceilings.

3.2.6 The guide recommends an Average Daylight Factor of 5% or more if there is no supplementary electric lighting, or 2% or more if supplementary lighting is provided. There are additional minimum recommendations for dwellings of 2% for kitchens, 1.5% for living rooms and 1% for bedrooms.

3.2.7 A special procedure is required for floor to ceiling windows such as patio doors. If part of a window is below the height of the working plane (a horizontal plane 0.85m above the floor in housing), this portion should be treated as a separate window. The ADF for this window has an extra factor applied to it, to take account of the reduced effectiveness of low level glazing in lighting the room. A value equal to the floor reflectance may be taken for this factor. The ADF for the portion of the window above the working plane is calculated in the normal way without this additional factor, and the ADFs for the two portions are added together.

3.2.8 Test 2 Room Depth

If a daylit room is lit by windows in one wall only, the depth of the room L should not exceed the limiting value given by:

$$\frac{L}{W} + \frac{L}{H} \leq \frac{2}{1-R_b}$$

Where

W is the room width

H is the window-head height above floor level

R_b is the average reflectance of the surfaces in the rear half of the room

3.2.9 Test 3 Position of the no sky line

3.2.10 If a significant area of the working plane lies beyond the no sky line (i.e. it receives no direct skylight), then the distribution of daylight in the room will look poor and supplementary electric lighting will be required.

3.2.11 The no sky line assessment is not applicable where a room derives its daylight solely from a light well or atrium. In these situations the room relies on borrowed light instead of direct skylight.

3.3 Sunlight to Windows

3.3.1 The BRE guide recommends that where possible each dwelling should have at least one main living room window that faces within 90 degrees of due south. However, the guide acknowledges that this is not always possible when it comes to flats.

3.3.2 The BRE sunlight tests should be applied to all main living rooms and conservatories which have a window which faces within 90 degrees of due south. The guide states that sunlight is viewed as less important in kitchens and bedrooms. In non-domestic buildings, any spaces which are deemed to have a specific requirement for sunlight should be checked.

3.3.3 The BRE guide recommends that main living room windows should receive 25% of the total annual probable sunlight hours, including 5% of the annual probable sunlight hours during the winter months between 21st September and 21st March.

3.4 Overshadowing to Gardens and Open Spaces

3.4.1 The availability of sunlight should be checked for all open spaces where sunlight is required. This would normally include:

- Gardens, usually the main back garden of a house
- Parks and playing fields
- Children's playgrounds
- Outdoor swimming pools and paddling pools
- Sitting out areas, such as those between non-domestic buildings and in public squares
- Focal points for views such as a group of monuments or fountains.

3.4.2 The BRE guide recommends that for an open space to appear adequately lit throughout the year, at least 50% of its area should receive two hours of sunlight on 21st March.

4 RESULTS OF THE STUDY

4.1 Window Reference Points

4.1.1 Refer to Appendix 1 for a drawing which identifies the positions of the windows and amenity areas analysed in this study.

4.2 Numerical Results and No Sky Line Contours

4.2.1 The numerical test results including all calculation workings are provided in Appendix 2. No sky line contours for the habitable rooms are presented in Appendix 3.

4.3 Interior Daylighting

4.3.1 Approximately 94% of all habitable rooms achieve or surpass the minimum recommended Average Daylight Factor (ADF) targets (only 27 of the total 461 rooms fall marginally short of their ADF targets). This is a very high level of compliance in the context of an urban development site.

4.3.2 The results confirm that 2 of the 27 shortfalls serve bedrooms (bedroom served by window 115 achieves 0.8% and the bedroom served by window 370 achieves 0.9% against the BRE target of 1% for this room type). The remaining shortfalls are to living/dining/kitchens (25 of the 27 shortfalls). Where a room type contains a kitchen, the ADF target applicable is 2%. However, we note that the BRE guide does not preclude developments from containing non daylit kitchens. The BRE guide states “Non-daylit internal kitchens should be avoided wherever possible, especially if the kitchen is used as a dining area too. If the layout means that a small internal galley-type kitchen is inevitable, it should be directly linked to a well daylit living room.”

4.3.3 Following the above, it is important to note that 21 of the 25 living/dining/kitchen rooms, which do not meet their ADF target of 2%, achieve at least 1.5% which is the target of a living/dining room. We are therefore of the opinion that the Average Daylight Factors scores achieved by the development is acceptable.

4.3.4 All rooms pass the room depth test where this test is applicable.

4.3.5 The BRE guide does not give fixed numerical pass/fail criteria for the No Sky Line test when applied to new dwellings (guidance is given for when this test is applied to

existing neighbouring buildings). However, for completeness, we have illustrated the no sky line contours in Appendix 3. The contours illustrate good access to daylight over a significant part of the working plane for the majority of the rooms.

4.4 Sunlight to Windows

- 4.4.1 The proposed development contains a mixture of south, south east & west and north east & west facing living rooms. Whilst the aim is usually to maximise the number of south facing living rooms within domestic dwellings, the BRE guide does not give mandatory sunlight requirements for flats. The guide states that for larger developments, especially those with site constraints, it may not be possible to have every living room facing within 90 degrees of due south.
- 4.4.2 Notwithstanding the above, 78% of the living rooms (128 of the 163) at the proposed development have at least one window which faces within 90 degrees of due south.
- 4.4.3 The results also confirm that, of the 163 living rooms within the proposed development, 121 contain at least 1 window which archives at least 25% of annual probable sunlight hours, including 5% of annual probable sunlight hours between 21 September and 21 March. The annual and winter probable sunlight hours data is presented in Appendix 2.

4.5 Overshadowing to Gardens and Open Spaces

- 4.5.1 The results confirm that 100% of the main communal green courtyard will receive at least two hours of sunlight on 21st March. The results also confirm that 93% of the fifth floor shared landscaped terrace will receive at least two hours of sunlight on 21st March. This is significantly better than the BRE recommendation which states that at least 50% of any garden or amenity area should receive at least two hours of sunlight on the 21st March.
- 4.5.2 Overshadowing assessments have also been undertaken on the two new ground level and first floor podium communal residential spaces. As noted by the BRE guidance, it must be borne in mind that nearly all structures will create areas of new shadow, and some degree of transient overshadowing of a space is to be expected. The two new courtyards form part of the range of residential amenity space provided as individual gardens, balconies and a large south-facing roof-top courtyard, together

with the landscaped central public open space. This mixture of individual, communal and shared amenity space provides a balance between safe and quiet environments, outlook and privacy, smaller and larger areas, playspace and individual space. Whilst it is acknowledged that as a product of their design and location, the two new courtyards will, in isolation, receive less sunlight than the BRE recommendation, the range of provision of landscaped central public open space, the rooftop courtyard, balconies and gardens ensures that all residents will have access to amenity space which greatly exceeds the minimum amount of sunlight recommended by the BRE guidelines.

4.6 Conclusion

4.6.1 Right of Light Consulting confirms that the proposed development design achieves a high level of compliance with the BRE recommendations. The majority of the proposed rooms meet or surpass the BRE numerical recommendations. Whilst a small number of rooms do not meet the recommendations, the results are not unusual in the context of an urban location. The BRE guide explains that the numerical guidelines should be interpreted flexibly, since natural lighting is only one of many factors in site layout design. The Local Authority should therefore balance daylight and sunlight considerations against all other material planning considerations when deciding whether to grant planning permission.

5 CLARIFICATIONS

5.1 General

- 5.1.1 The report provided is solely for the use of the client and no liability to anyone else is accepted.
- 5.1.2 We have undertaken the survey following the guidelines of the RICS publication “Surveying Safely”.
- 5.1.3 Where limited access is available, reasonable assumptions will have been made.
- 5.1.4 Right of Light Consulting have endeavoured to include in the report those matters, which they have knowledge of or of which they have been made aware, that might adversely affect the validity of the opinion given.
- 5.1.5 Right of Light Consulting will notify those instructing them immediately and confirm in writing if for any reason the report requires any correction or qualification.
- 5.1.6 Right of Light Consulting confirm that they have used their best endeavours to ensure that the facts stated in this report are correct and that the opinions expressed represent a true and complete professional opinion.
