2016/2892/P	S neave	148 gloucester avenue camden NW! 8JA NW! 8JA NW! 8JA	03/07/2016 12:13:30	COMMNT	We strongly oppose the high poles & wires advocated in the borough especially in Gloucester avenue & the local streets. There is a declared public aim to reduce street furniture. Re Exhibition road, now an oasis of peace. Telephone companies were strongly pressed to route their cables underground in the 1930's & the result is far better compared with many American cities strewn with free enterprise wires. This proposal is selfish & unnecessary. Network rail could be paid to accommodate them out of site in some of its linear property which follows part of this route. If allowed, sects could then want to put up their paraphernalia, The precedent would have been agreed. Please stop this unsightly erection all over our area. It's not needed, will damage the cherished urban environment & it is irrational. If people are that religious they should obey their law. The quality of our streets directly affects the quality of our lives. Please keep them tidy & keep out wires & poles. We are a conservation area. In Manchester the new 2001 trams were not allowed separate poles in some areas for the same reason. In Bordeaux in some areas the trams have batteries, costing £100,000 more per tram & wires are not allowed because the community regard wires on the famous river front as abhorrent. The same should apply in our cherished areas.
