2016/3230/P	oliver froment	10 PILGRIM'S LANE	14/07/2016 21:42:56	OBJEMPER	1- It is highly misleading for the applicant' s consultant, Infrastruct, to state that there will be no increase in surface runoff and no increase in the amount of water run off.Under the proposed plans due to the creation of a large basement there will be a substantial new underground structure that will act as a dam like structure and that will indeed create substantial underground water runoff. So the condition should not be removed 2- The matter should otherwise be reviewed by an independent geologist appointed by Camden that will take into consideration this objection. Please do not remove any restrictions and reject as such this application. Thank you
