Void above existing modern suspended ceiling to be investigated to ascertain existing fire protection to underside of floor. Any areas lacking fire protection are to be underlined with 2no. layers of plasterboard to provide a min. 60minute fire protection

# Basement Floor Plan

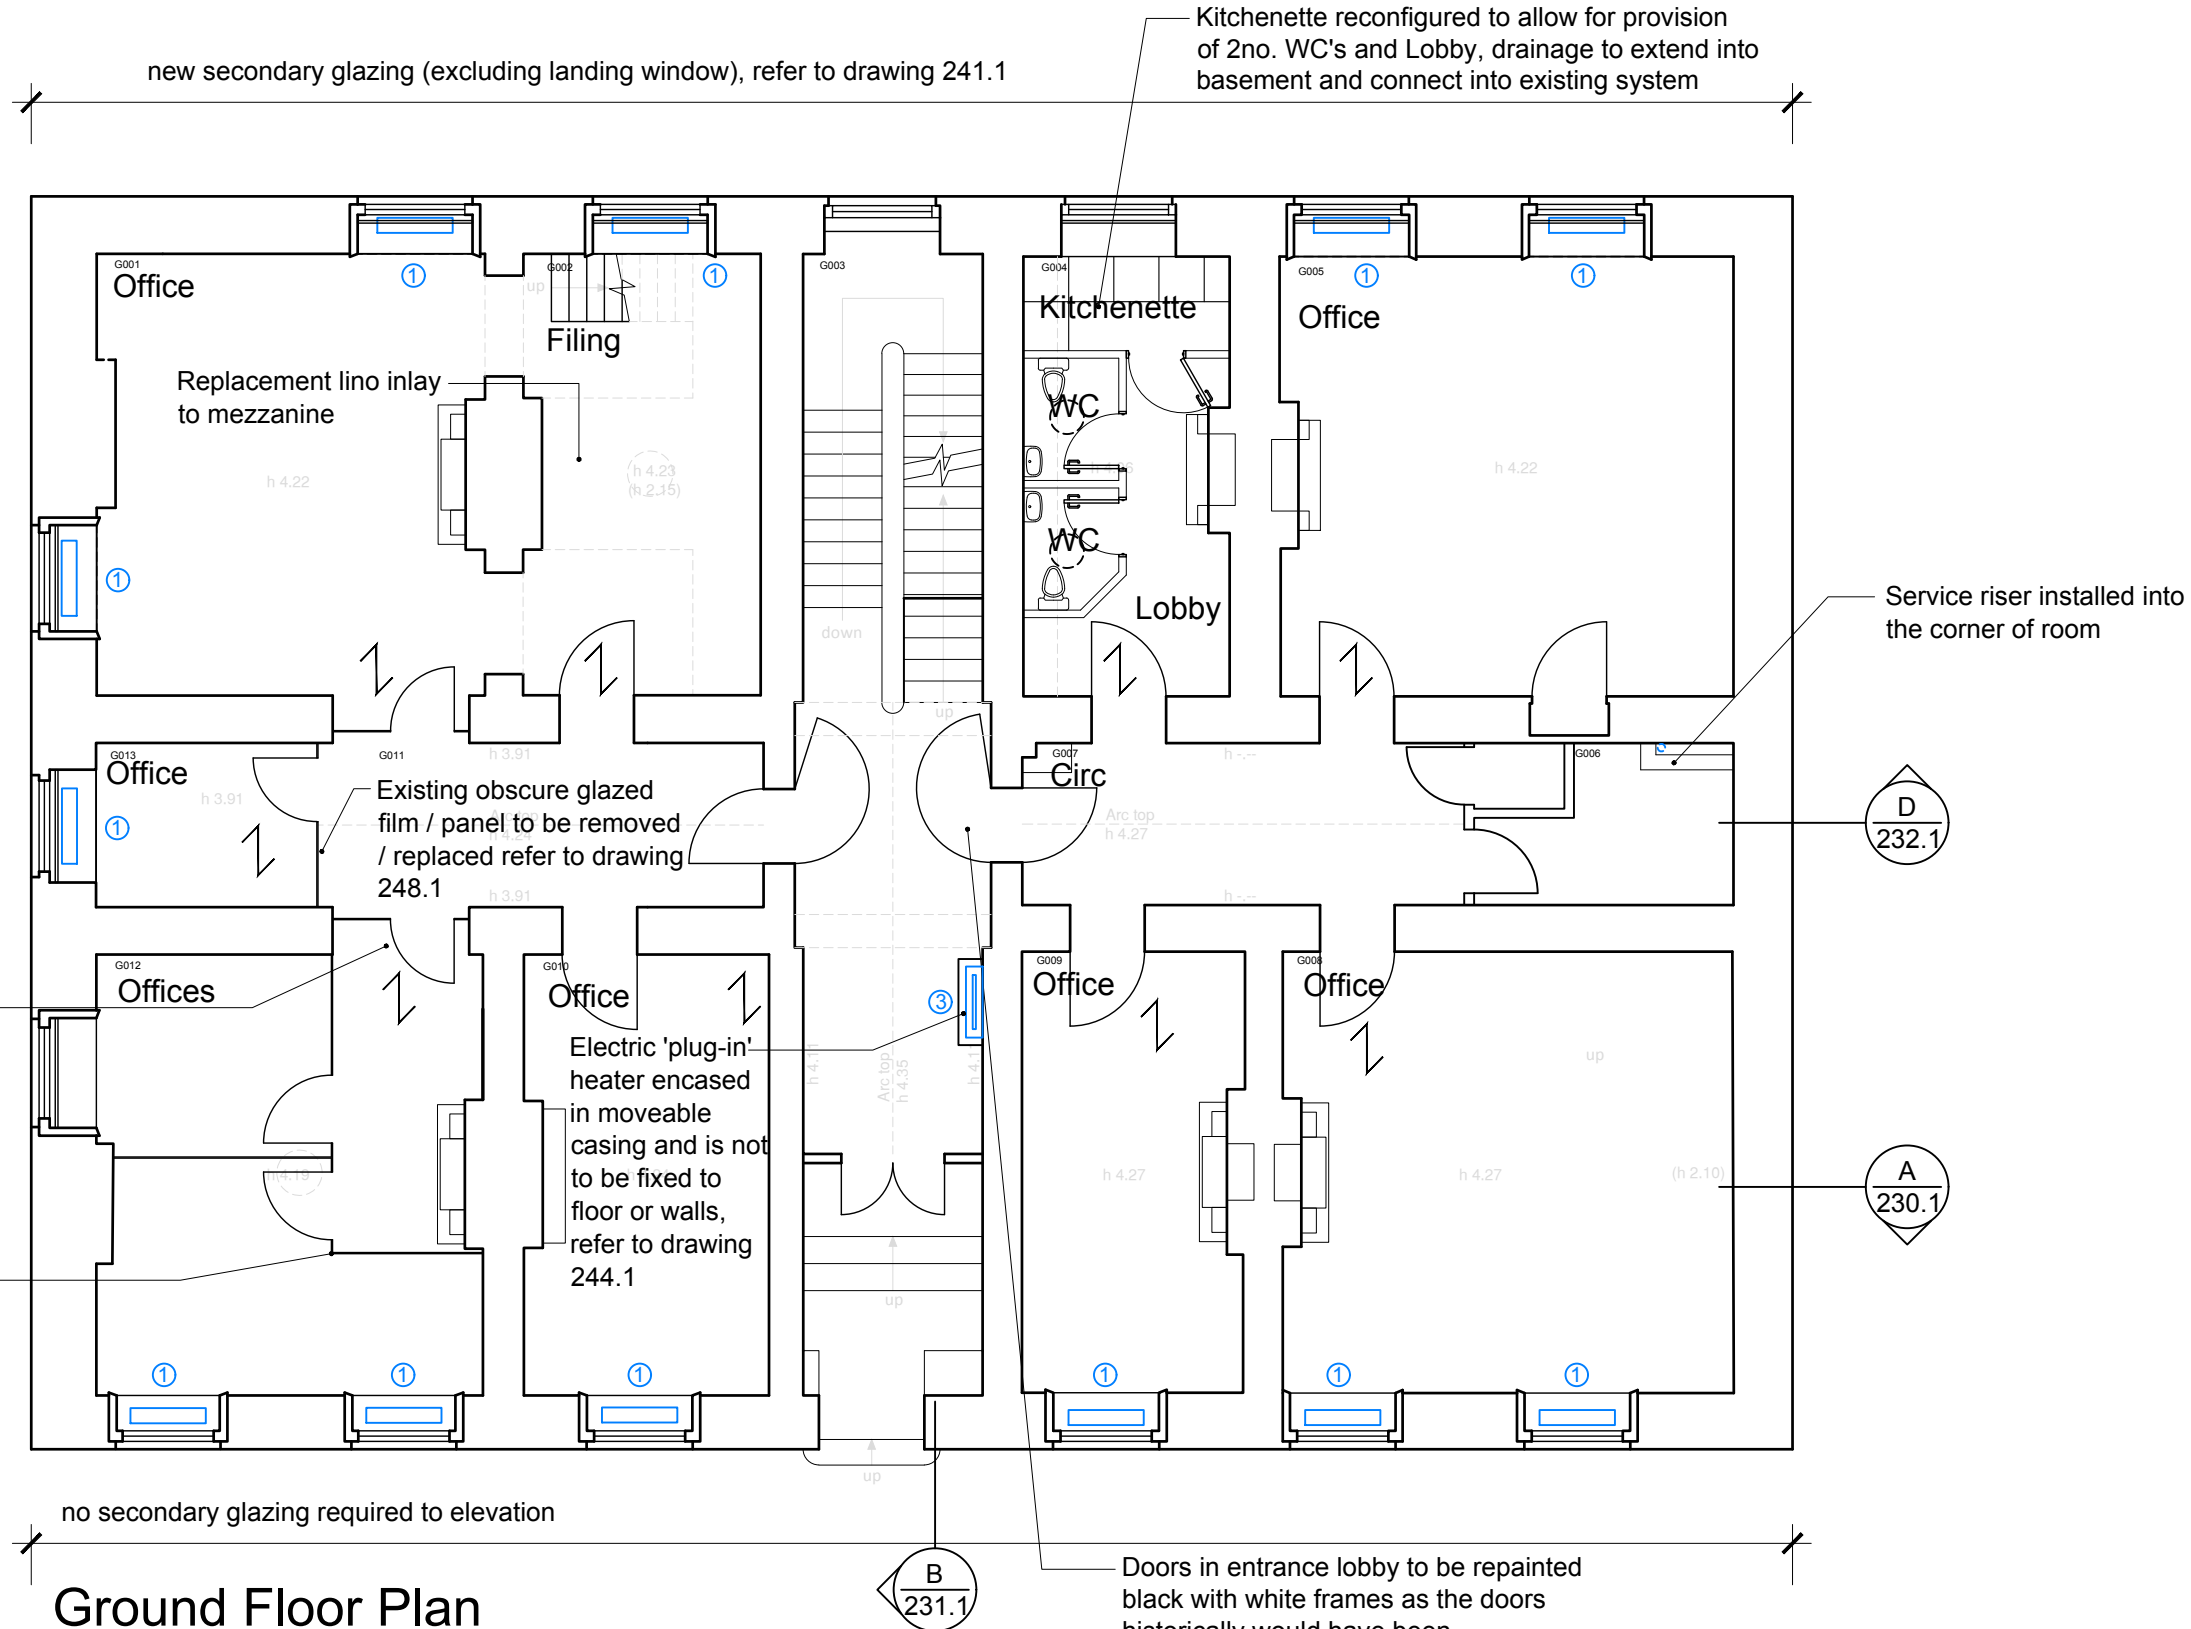

NB:

- New 'boxed in' heating units as indicated
- Heating unit casing types shown thus X refer to drawing 244.1
- Where required, plaster repairs to walls and ceilings are to be on a 'like for like' basis
- Existing Kitchens and WCs to be renewed including new fittings, tilings, decoration etc
- Existing openings to be infilled shown thus  refer to drawing 251.1 for details
- Doors labelled thus R are to be retained, numbered doors 1 are to be replaced refer to drawing 253.1

- Floor boxes to be fitted into floor zones carefully to ensure joists and herringbone strutting etc is not damaged
- To incorporate tenant electrical requirements, some walls may need to be chased, this is to be kept to a minimum
- Rainwater outlet to flat roof to discharge into downpipe connecting into existing combined system as previous arrangement -----
- Drawings to be read in conjunction with Aura (M&E)

## Second Floor Plan

- NB:
- New 'boxed in' heating units as indicated
  - Heating unit casing types shown thus X refer to drawing 244.1
  - Where required, plaster repairs to walls and ceilings are to be on a 'like for like' basis
  - Existing Kitchens and WCs to be renewed including new fittings, tilings, decoration etc
  - Existing openings to be infilled shown thus  refer to drawing 251.1 for details

- Floor boxes to be fitted into floor zones carefully to ensure joists and herringbone strutting etc is not damaged
- To incorporate tenant electrical requirements, some walls may need to be chased, this is to be kept to a minimum
- Holes in flagstones left over by removal of shelving etc are to be filled in and made good by stone mason
- Drawings to be read in conjunction with Aura (M&E)

Typical Sections Through Basement Floor

Typical Sections Through Ground Floor

Basement Floor Key Plan

Ground Floor Key Plan

### Basement Floor

The blue hatching denotes area of basement with solid floor construction, floor finishes rest directly onto concrete slab. All services and service runs are to be made within the existing suspended ceiling.

The green hatching denotes the floor construction shown on the section above, and will allow pipe work to be routed through the batten void.

NB: Drawing to be read in conjunction with M&E drawings for routing of pipework

Typical Sections Through Ground Floor

Generally, pipes routing through the ground floor zone are to be passed through voids in the substructure walls and underneath / between the existing joists, or where possible through existing heating pipe routes.

## Typical Sections Through First Floor

Showing herringbone strutting

## Typical Sections Through First Floor

Generally, pipes routing through the first floor zone are to be passed through the void between the floor and ceiling joists, or where possible through existing heating pipe routes. Herringbone strutting is to be retained, and in no circumstances to be notched or drilled. Where required, local areas of pugging can be removed to allow for routing of pipes.

## Typical Sections Through Second Floor

Generally, new pipework is to follow route of existing heating pipes where possible, or between joists, notching of joists for new pipe routes is to be kept to a minimum. The herringbone strutting is to remain with no notching or holes drilled. Where required, pugging can be locally removed to aid the routing of the pipes.
