

## Proposed Corton Steel Fencing Panels in Wider Context of Harmood Grove

The proposed additional fencing panels have been made by the designer of the existing permitted fence. The corton steel panels to be used are consistent with the previously consented design.

The existing northern gates to the application site are made of the same corton steel as is proposed.

Corton steel is used throughout the development site, including for the base wall of the permitted fencing.

The southern access gates are made of corton steel. The additional fencing above the southern gates was erected in 2014 and forms part of the planning application (retrospective).
