ref: proposed basement construction + use  
next door to AIR Recording Studios

Sir, I ask you, collectively, to vote down  
this proposal - and, at the same time,  
to put a covenant on this area of land  
(around AIR) to preserve the vital two  
acoustic properties which attract the world's  
greatest musicians to record there ---- ① the  
natural resonance of the main studio room there,  
in which a large ensemble can play delicate  
passages very quietly, with ② total silence  
in the room (studio) all the time, day  
and night.

There are, already, very few  
such rooms in the world where the orch-  
estra can play pianissimo, very softly,  
because the room gives them the

(2)

constant silence which ~~player~~ each player refers to for his own volume.

If you committee members vote for the basement, or any such new build within the necessary "earshot" circle centred on the AIR Studio, you will knowingly destroy its almost unique reason to exist, that brings great musicians and conductors to record there.

For what? To eventually fill the whole plot with mansions + basements, as soon as the bank-rupt AIR building is demolished?

If you vote yes to this, you will be revealing that the above is indeed your intention -- there is no other plausible natural reason for you to approve it.

I too am making preparations

(3)

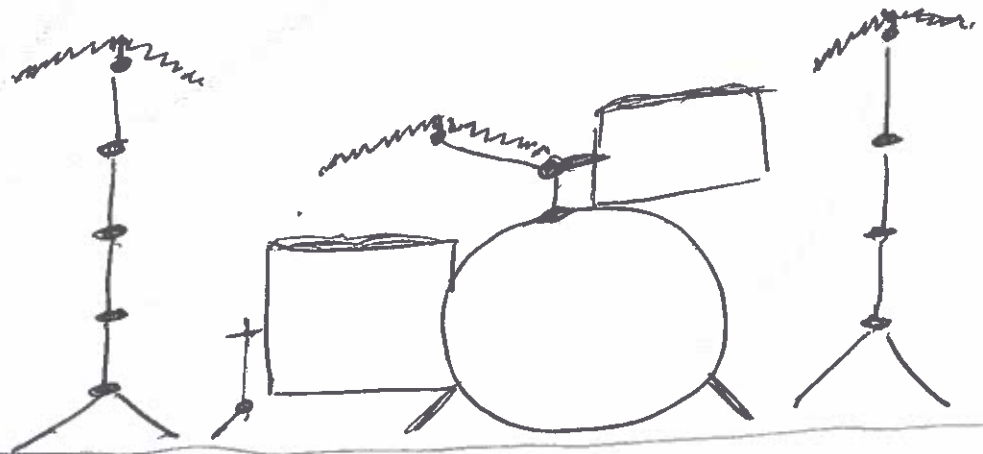

for a series of orchestral recordings, all 75 players together in the ideal acoustic space that only AIR has --- there's nowhere else I can achieve that (and still have the technical skilled team who are also part of a great performance and recording.) But if you vote this through, I shall have to cancel the entire series, and all the good employment that goes with it.
