2016/4401/P	Ash Shah	137 Cholmley Gardens West Hampstead London NW61AB	06/09/2016 09:22:09	SUPC	Dear Mr Lester Further to the application for the replacement boiler piping - I understand the need for this, however I would the following to be taken into account: 1. No louder (noise when on and off) than the current system - with more accurate sound readings taken from the residential block affected not random spots as per the reports 2. Removal of the old duct... it should be removed 3. Have alternative locations for the piping been considered - such as long other roofing of the main boiler building itself rather than up the side of a residential block
