

1. The waste calculations are based on:-

- a) Camden's guidelines for waste to be generated by the 1x1 bed and 1 x 2 bed residential serviced apartments.
- b) The current waste generated in the existing Synagogue from:-
 - i) The nursery/crèche
 - ii) General activities
 - iii) The Kiddush that takes place on Saturdays
 - iv) Self-service coffee/tea facility

Based on current waste generation plus a factor [of 30%] to reflect the anticipated expansion of each of the activities listed above.

- c) It is anticipated that there will typically be 2 catered lunches or dinners per month with an average of 60 participants and 2 catered lunches or dinners per month with an average of 150 participants.

The waste volumes for the above are based on the waste currently being generated for catered events within the existing building with between 40 and 100 people.

2. Calculation for waste generated

		General waste (litres)	recyclable
2 residential units – 5 people (based on Camden figures)	400 litres/week	320	80
Nursery/General	500 litres/week	400	100
Week-end catering (normal)	500 litres /week	450	50
<u>Special event catering</u>			
Twice monthly (150 people)	1600 litres/week	1500	100
Twice monthly (60 people)	700 litres/week	650	50
	Average weekly	2250	300

3. It is anticipated that waste will be collected by [Camden Council /private contractor]

- a) We will require twice weekly collection on Thursdays and Sundays for general waste.
- b) Additional collection on Mondays (or on other days as appropriate) maybe required after a large catered event with 150 people (anticipated twice monthly).
Additional collections will be booked in advance of the event taking place.

All general and wet refuse will be stored, ready for collection in the 3 x 1100 litre Eurobins situated in the refuse enclosure shown on the attached plan. An additional 1100 litre Eurobin will be reserved for recyclables.

4. Movement of waste within the building

All waste other than recyclables will be bagged in bin liners and sealed.

Waste from the first, second and third floors will be transported daily by the resident caretaker via the main staircase to the ground floor and then via the emergency exit to the forecourt and placed in the bins provided in the forecourt area enclosure.

Waste generated in the kitchen and hall in the basement will be placed in sealed plastic bags and transported on the open platform hoist provided (see attached plan) to the ground floor in the forecourt and then placed in the storage bins.

No wet waste will remain in the kitchens overnight (for hygiene purposes).

To avoid possible disturbances to neighbours, no bottles or recyclables will be placed in the storage bins outside the hours of 8.00am – 6.00pm.

5. Refuse collection vehicles will park on the roadway with a single yellow line outside the main vehicular entrance gate adjacent to the bin area. The security guard or the caretaker will open the gate when the refuse collection vehicle arrives.

For security reasons it would not be possible (based on advice from the Community Security Trust) for keys to be issued, or for the bin storage area to be open to the street or pavement).
