2016/4804/P	E M Edwards	18 Sidney Boyd Court West End Lane NW6 4QZ	15/09/2016 13:02:58	COMMNT	<p>My comments are about the communication process and information provided .</p> <ol style="list-style-type: none">1. there is no indication of size of the items to be installed. Surely this needs to be communicated .to allow residents to consider what the potential impact might be.2. there is no indication of the distribution on the roof space of the items to be installed, specifically above which flats these items will be placed.3. there is no indication of the impact to residents of the work i.e scaffold , hoists , time , vehicle access ,general disruption .4 . there is no indication of any health or safety considerations , such as possible interruptions to health monitors or other essential electrical equipment.. Also site safety/protection needs be considered and communicated5. there is no indication whether those most impacted will be compensated6 there is no indication whether old equipment will be removed <p>In effect there is insufficient information to allow residents to consider the impact that these installations will cause and therefore until that is provided I feel that the planning process should be halted until a full consultation of residents supplied with all the facts is made..</p>
