Subject: Application 2015/6455/P

Sirs / Madams

I have visited this Planning Application on your web page for the first time and note a marked lack of block modelling of the scheme in the context of surrounding buildings, a lack of sections across the site to show the proposed building's relationship with adjacent buildings, and that all elevations are of the proposed building in isolation and again without contextual elevations of buildings with whom they are, I should suppose, intended to meld in harmony with.

This being so I cannot see how it is possible for either the Planning Officers or the general public to comment on the Application without being in proper possession of rather vital facts.

These are common requirements by the Planning Departments in other Boroughs, but one I note often missing or apparently not required by Camden Planning Department.

Unless they are provided I do not see how Camden can support the Application in its present form.

Mal Parker
