Matthias,

Thanks for your call although I didn't quite catch the tail end of your conversation due to the poor line. As discussed, a lighting specification was submitted as part of the application which provides further details on the technical details of the LED panels.

The specification of the technology of the replacement infoband will be improved and as such allows better control over the brightness levels, with only the day-time levels increased to improve the visibility of the display in sunlight.

As also discussed, the indicative photomontages were submitted for information as part of the application albeit they are not a formal application requirement. You will see from my correspondence with Antonia previously that the photomontages which were submitted with the Listed building and Advertisement application in 2009 would be a much truer representation of the replacement infoband than the current infoband.

Please could you confirm that the lighting specification provides sufficient information for you to be able to assess the application?

Kind regards,

Katie
