

SHOPFRONT SIGNAGE @ 1:50

PROPOSED SIGNAGE

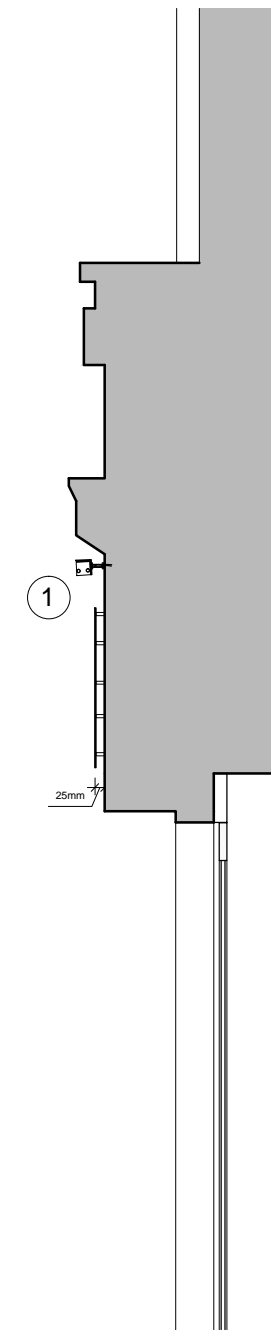

New fixed fascia sign to be formed in flat laser cut stainless steel letters and fixed to existing fascia with concealed fixing bolts with stainless steel spacers, reversible. The sign is to be polyester powder-coated black to match the tone of the painted fascia so as to be visually discrete.

- ① The sign is to be toplit with a discrete black painted LED rigid lighting strip as described in the manufacturers literature which accompanies this application. This is discretely fixed through the fascia with bolts and black painted stainless spacers, all reversible. The illuminance level will be no greater than 600 cd/m. This will give limited light output onto the face of the sign so that it is legible against the matching background of the fascia.

The proposed dimensions are as indicated.

SHOPFRONT SIGNAGE @ 1:20
