

SITE PHOTOES
Project “28 Greville Street – London EC1N 8SU”

Existing site pictures taken of main roof and front elevations to show the existing site constraints and also to demonstrate the design proposal for roof extension and front extension for top floor will be in keeping with adjacent property. It will provide a consistency of street view while replicating the existing material and finishing to existing structure.

The rear building is more than 20m away from the site and a large open space is existing between these site and therefore any extensions to the main roof has no detrimental impact or loss of light or privacy to the neighbouring sites.
