

CAMDEN MARKET BUILDING A+B RAMP REMOVAL

DESIGN & ACCESS STATEMENT

3 March 2017

Prepared for

STANLEY SIDINGS

It is proposed to remove the existing ramped steps that provide access to the upper floors of the building. This proposal will improve the building in the following ways:

This will improve the visibility of the retail units at ground floor and upper basement.

This primary entrance to the upper floors is not an accessible route for all persons. The new primary access to the upper floors will be provided through the rear upper ground floor of the existing building. This will provide full level access to the upper floors for all persons in the one location.

Where the existing entrances at first floor level punch through the existing facade, these will be made good with new external cladding to match the existing adjacent.
