2017/1684/P	Mr Lokesh Khiani	20 Huson Close London	20/04/2017 11:24:22	COMMNT	<p>We live in 20 Huson Close, which looks directly onto the proposed extension site from the communal garden to the left hand side of it.</p> <p>In principle, we are fine with the building of the extension. However, we are concerned with the side elevation impact of the extension on the communal garden environment. To that extent, I have a number of questions, which don't appear to be addressed in the plan diagrams posted online.</p> <p>(1) what are the existing dimensions of the wooden frame awning with perspex roof? I can see the proposed extension at 4000mm, but not sure how that compares to the existing design</p> <p>(2) how will the extension foundations be set to deal with the steep banking of the garden away from the proposed site's house? Is this a solid brick construction?</p> <p>(3) is there a side elevation diagram from the perspective of the communal garden? At the moment, there is a white fence separating the communal garden and proposed extension site. Does the fence remain in its entirety? Are there any proposed changes to the fence to insulate the communal garden from the extension building?</p> <p>Thanks, Lokesh</p>
