1.0 Significant Risks

1.1 There are no significant risks with this system

- 1.2 All risk relates to access of the roof for maintenance
- 2.0 System Component

2.1 The system comprises of:

- Protection layers:
 - supplied by others
- Drainage layer:
 - GRD25 nominal 25mm rigid compression cell multiflow drainage board supplied by Greenroofers ltd.

• Growing medium:

- Greenroofers engineered lightweight extensive green roof substrate. The material will contain a mixture of pumice, expanded clay and crushed brick amongst other ingredients such as fillers of coarse sand. It will contain organic peat free compost and have a bulk dry weight of 936kg/m³. Installed to a finally settled depth of 55mm including an allowance for 20% settlement in accordance with the GRO Code of Best Practice.
- Vegetation layer:
 - GRS38 Sedum mat, average 25mm thick pre-grown mat containing a minimum of 11 species of sedum (sourced from 38 different varieties) at 90% coverage upon delivery and harvest.

• Vegetation break:

- 300mm wide, Coastal 20, 20/40mm washed rounded pebble margin, free from sharp edges and contaminants
- Perimeter Trim:
 - 80mm high aluminium slotted trim, mechanically fixed to under layer to serves as a separation barrier to perimeters.
- Habitat Spaces
 - Not required.

3.0 The Works

3.1 Scope

The scope of works for this project are the installation of a light weight sedum green roof structure with paving slabs laid on adjustable supports.

3.2 Hazardous Materials

- **3.2.1** No hazardous materials were employed in this construction
- **3.2.2** COSHH Sheets are available on request
- **3.2.3** No waste consignment notices are applicable

3.3 Site Installation & Monitoring Records

3.3.1 Materials installed as per the customers instructions and recognised industry best practice.

3.4 **Quality Assurance & Handover**

3.4.1 Site walked with the contractors representative and accepted

4.0 Statutory Notifications

All products supplied CE marked where appropriate and with manufacturing traceability where required.

5.0 Operations and Maintenance

- **5.1** Installation of sedum roof and paving, no mechanical parts, with the except of irrigation if required (not applicable in this instance)
- **5.2** The roof must be watered thoroughly for a period of 10 weeks following handover. The term watered may include a prolonged period of rainfall, but site specific conditions should be checked to ensure that area is not saturated but is also moist.
- 5.3 Planned maintenance

Autumn:

- Trim the roof surface to remove all dead vegetation, rake off debris and cart away. Spring:
 - Inspect substrate surface and vegetation barriers; remove all unwanted grasses, weeds, saplings etc.
 - Any bare areas of substrate must be re-seeded and lightly raked over, or re-planted.
 - Ensure that perimeters and roof outlets are free from weeds and other blockages.
 - Fertilise with slow release nutrient fertilizer at a rate of 25 grams per square metre.

5.4 Maintenance Contract

- **5.4.1** If a maintenance contract is entered into, our inspection will map the in 50 m2 sections. This will enable us to monitor the species growth and uptake
- **5.4.2** Any "bold" spots will have additional rhizomes spread throughout the area to encourage growth and full coverage
- 5.4.3 Dead material will be removed from the roof to avoid the build up of nitrates
- 5.4.4 Paving slabs will be checked for stability
- 5.4.5 Please refer to maintenance schedule attached in the appendix for specifics

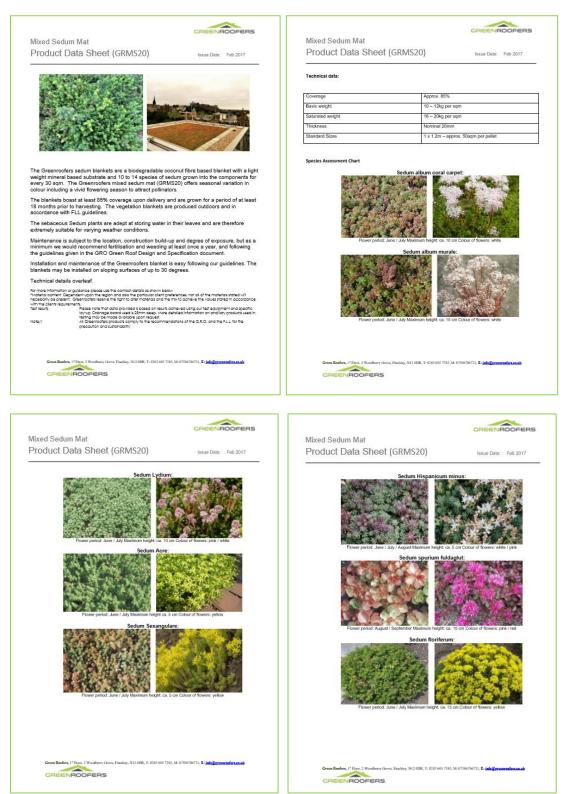

5.5 Significant Maintenance H&S risks

- **5.5.1** Manual handling is not to be undertaken with loads over 20kg and should be risk assessed for the ergonomics of the site.
- **5.5.2** Safety and PPE protection should be work when Strimming and removing dead materials
- **5.5.3** Any fall arrest system and subsequent PPE should be assessed for suitability and accepted prior to enter a zone on the roof where fall arrest equipment is required.
- **5.5.4** All provided PPE including fall arrest equipment MUST be worn when working on the roof space
- 5.5.5 Data sheets and COSSH information available from The Greenroofers GREENROOFERS Ltd, 1st Floor, 2 Woodberry Grove, Finchley, N12 0DR, 0120 3605 7385, info@greenroofers.co.uk
- 6.0 Test inspections and Approvals
 - **6.1** The roof is deemed to be performing and acceptable providing the living materials can be visually seen to be alive and flourishing.
