

## 3.0 The Proposal

### 3.2 Facade Improvements-Windows openings

Due to the fact that our building has only two facades, it is highly necessary to increase the windows openings sizes to allow more natural light coming into the building.

The broken rhythm of the proposed facade reduces the scale of the overall opening and allows the smaller panels to be openable for natural ventilation in the interior.

To increase the significance of the plants we are painting the existing brick in dark blue colour.

The existing residential entrance (Purchase Street) will be improved as it will be framed with the surrounding greenery. Special attention will be put in the type of plants placed around the entrance so its visual appearance is both amplified and dignified.
