| 2017/2375/P | Catherine Barker | 51 Raglan Street London NW5 3BU | 10/06/2017 11:18:07 | OBJ | This is a residential block in a residential area with many families and young children. The fact that there is no firm evidence of a health risk associated with mobile phone masts is NOT the same as saying there is no risk. No-one knows. Just like BSE, thalidomide and other 'safe' practices which turned out not to be safe. A former Microsoft CEO says: "My industry is on a campaign to bury the science and to confuse the message on the harmful effects of wireless devices. I've seen the tremendous benefits that technology can provide. My concern is nobody can say that it's safe." I would therefore object to 8 masts being placed here. I suggest the controversy over mobile phone masts will also adversely affect property prices for homeowners in the area. |
