

Transport & Highway assessment - 2 TORRIANO MEWS, NW5 2SD

Transport & Access: General

Concerning implementation of the Camden Council sustainable transport strategy, the site is served by a number of public transport access routes including mainline trains, underground lines & bus services as well as cycle dedicated highways.

Note: Map below outlines local railway/tube stations & Bus stops within 1km proximity of site - indicated in red.

Transport & Access: Site

The site has one dedicated parking space that the scheme will retain, likely coupled with the ground floor flat to provide flexibility to potential end users with limited accessibility. The retention of the parking space will have no greater impact on the current parking or traffic level and arguably the change of use from commercial office to residential will further reduce the level of traffic throughout the day.

The map demonstrates a number of public varying transport links within reasonable walking distances that support the reduction of traffic and the general sustainable transport strategy throughout the borough.
