| 2017/3360/L | Herman Tribelnig | POB 10850 London NW1 8WF | 27/07/2017 13:53:49 | COMMNT | <p>Dear John Diver, you are the case officer for this submission.</p> <p>Can I suggest that you effect a site visit with your colleague from the Camden Conservation section(see the application letter - consultation), Catherine Bond, and someone from the enforcement team in Planning for a joint viewing the white lettering on the elevation of this part of the BL building. It is higher up above the cabinet subject to this submission. CONFERENCE CENTRE... or something similar.</p> <p>The letter type can be described as the known 'letra set' type, flat white plastic paper transfer letters, stuck against the burgundy colour trim work embellishing the brickwork, letter height approx one foot.</p> <p>This appears very intrusive, is screaming at one and is out of character with everything. The visual disturbance even reaches beyond the forecourt and Newton sculpture area to Ossulton Street, by night light as much as during the day.</p> <p>I believe it was a temporary fixture but never had agreement under Planning.</p> <p>Please check for yourselves and come to your own conclusion.</p> <p>Removal not only an option. Thank You very much.</p> <p>Thank you.</p> |
