

Proposed storm water attenuation tank.
To be located above slab level
Volume required = 47.5 m³

Limited discharge rate = 5.0 litres/sec

M&E to provide details for tank structure and pumping arrangements.

Discharge to be pumped up to gravity system at basement high level.

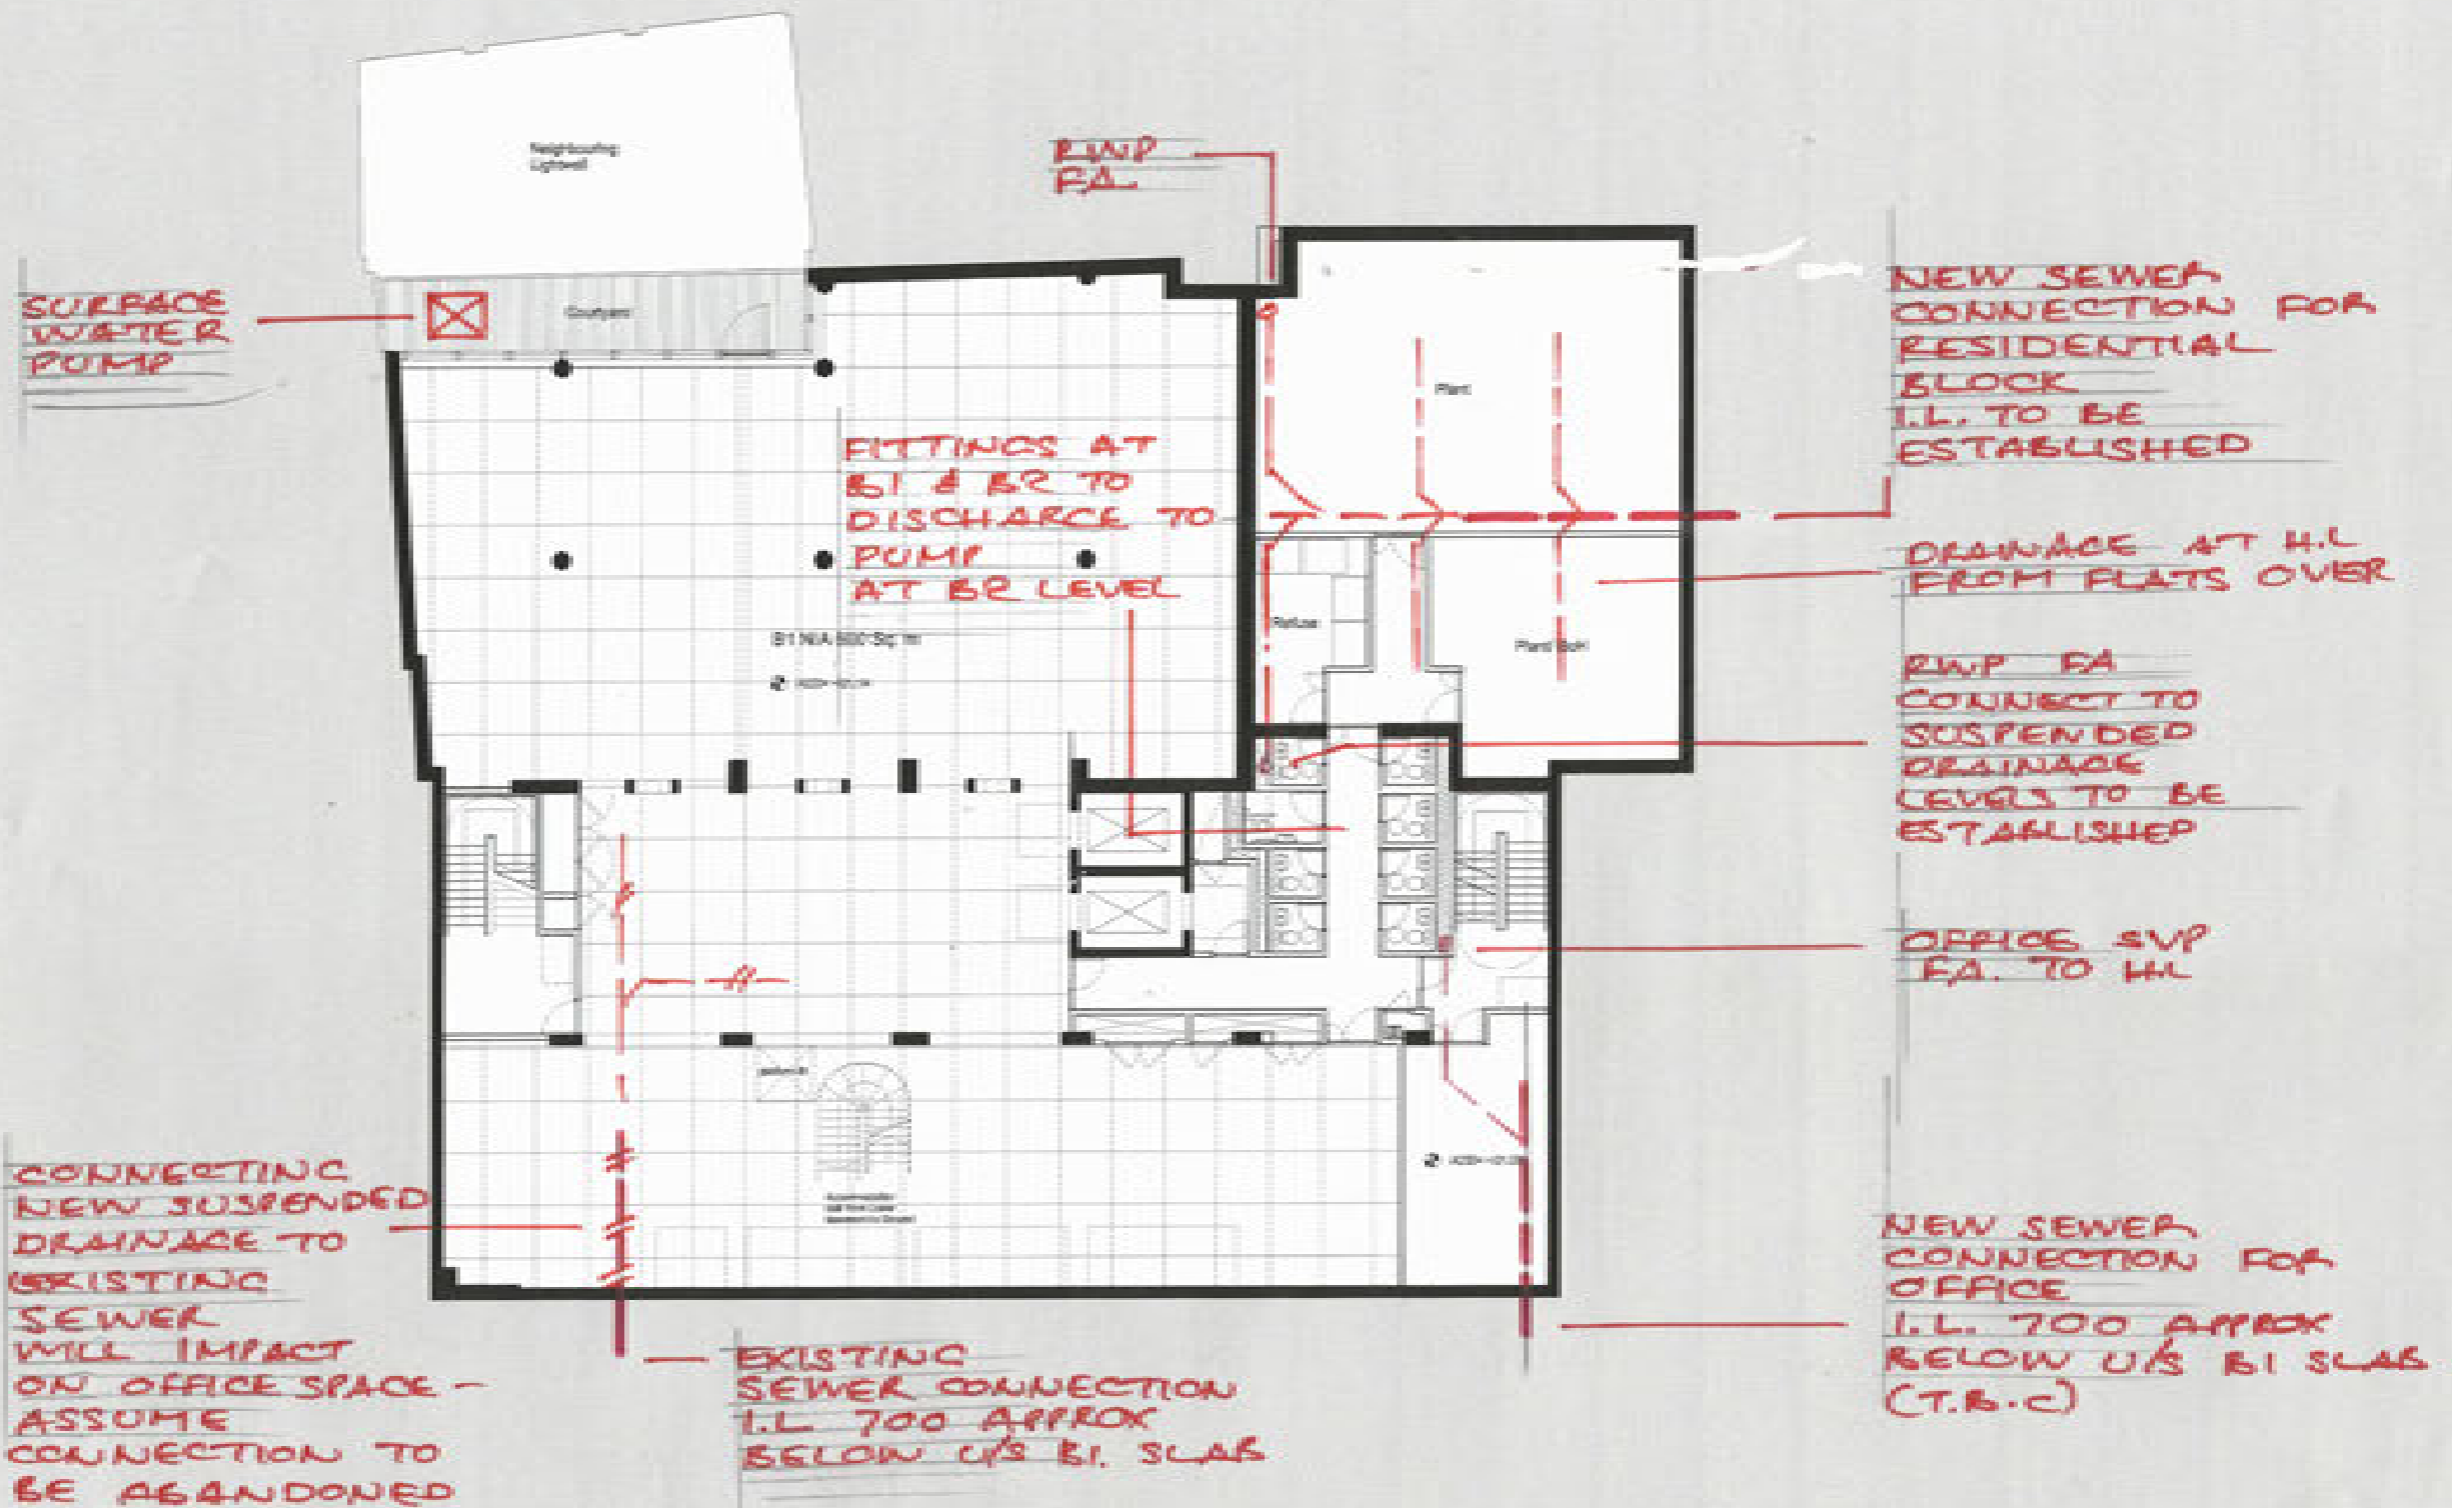

Proposed below slab foul water drainage arrangement to connect to pump station.

1.2m diameter GRP chamber and dual pump set (duty & standby) required. TBC at detailed design stage.

Discharge to be pumped up to gravity system at basement high level.

Appendix J

Proposed Sewer Outfalls Sketch

DRAINAGE STRATEGY

- 1. 100mm dia. down pipe to sump
- 2. 100mm dia. down pipe to sump
- 3. 100mm dia. down pipe to sump
- 4. 100mm dia. down pipe to sump

1. Check all existing drainage connections to be retained or replaced. 2. Check all existing drainage connections to be retained or replaced. 3. Check all existing drainage connections to be retained or replaced. 4. Check all existing drainage connections to be retained or replaced. 5. Check all existing drainage connections to be retained or replaced. 6. Check all existing drainage connections to be retained or replaced. 7. Check all existing drainage connections to be retained or replaced. 8. Check all existing drainage connections to be retained or replaced. 9. Check all existing drainage connections to be retained or replaced. 10. Check all existing drainage connections to be retained or replaced.
