

PLANNING HERITAGE DESIGN AND ACCESS STATEMENT

34a Rosslyn Hill, London NW3

Page | 1 Introduction

1. This statement is submitted in support of a planning application for rear extensions to the existing office accommodation at the above property.
2. The northeast side of Rosslyn Hill, namely Nos. 28-36 (evens) is characterised by 4 storey buildings topped with pitched roofs. To the rear, the prevailing development is that of 2 storey closet wing extensions, rising up to first floor level.
3. The site falls within the Hampstead Conservation Area. The terrace has been identified as a positive contributor in the Conservation Area but is not listed. The photographs below provides a view of the rear of the terrace (from Downshire Hill) as well as the rear of 32 and 34 Rosslyn Hill.

4. The site is a 5 minute walk from Hampstead underground station and 10 minute walk from Belsize Park station. There is also a bus service from Rosslyn Hill, which goes to the under/overground stations.

Proposal

5. It is proposed to extend the property at 1st and 2nd floor at the rear to provided additional office space. The 1st floor addition would result in an increase of 44m², whilst the 2nd floor above will deliver 36m² making a total increase of 80m². The existing offices have a floorspace of 110m² which would increase to 190m².

6. The main issues for consideration are:
 - The impact of the proposal upon the character or appearance of the host building and the surrounding conservation area and;
 - The impact that the proposal may have upon the amenity of the occupiers of the neighbouring properties.

Impact on the host building and surrounding area

7. The property is occupied as a restaurant on the ground floor with office accommodation above. It is intended that all work will enhance the character of the building and Conservation Area when completed. The proposal seeks to extend existing offices to provide additional floor space and a reorganisation of the internal layout.
8. In terms of height, it is noted that the existing property is 4 storey in height with a pitched roof. The proposed extensions comprise 2 distinct elements namely the 1st floor and 2nd floors.
9. At its highest part the proposed extension would be significantly lower than the existing roof ridge and well below the eaves. Overall it is considered that the proposed extension would be subordinate to the host building and it is noted that an extension of similar height was approved to the rear of No. 32 Rosslyn Hill in 2015.
10. The photograph of the rear façades of 28-36 Rosslyn Hill illustrates that the overall composition does not, in our submission, contribute positively to this part of the Hampstead CA. the present proposal would make a contribution towards improving this aspect of the “terrace”.
11. The current proposal would have no effect on the principal front elevation; the extension would be visible but, in our submission, well designed and of the right proportions to ensure it will appear subordinate to the existing building.
12. It is noted that Policies DP24 and CPG1 (design) advocate a general presumption towards resisting extensions that rise above the general height of neighbouring projections and nearby extensions.
13. The proposal however, represents an opportunity to improve the appearance of part of the rear façade of the “terrace” which would have a beneficial effect on this part of the Hampstead CA.

Residential Amenity

14. It is considered the proposal would not materially harm the living conditions of the occupiers of neighbouring properties in terms of a loss of sunlight/daylight or outlook than the existing arrangements.

15. There are a number of existing windows in the rear façades of the terrace already and it is considered the proposal would be of no greater detriment to the levels of privacy enjoyed by the occupiers of the surrounding properties than the buildings existing arrangement.

Design and impact on the building and surrounding Conservation Area

16. The northeast side of Rosslyn Hill, namely Nos. 28-36 (evens) is characterised by 4 storey buildings topped with pitched roofs. To the rear, the prevailing development is that of 2 storey closet wing extensions, rising up to first floor level.
17. The adjacent property of No.32 has been granted permission for a two storey rear extension and in our submission it is evident that our proposal would be of a similar scale, design and facing materials to this approved addition.
18. The first and second floor levels would be stock brick, with a single window on the rear elevation maintaining the footprint of the existing stock brick extension below.
19. In consideration of Camden Planning Guidance 1 (Design), rear extensions should be designed to:
- *be secondary to the building being extended, in terms of location, form, scale, proportions, dimensions and detailing;*

Proposal complies

- *respect and preserve the original design and proportions of the building, including its architectural period and style;*

Proposal complies

- *respect and preserve existing architectural features, such as projecting bays, decorative balconies or chimney stacks;*

Not Applicable

respect and preserve the historic pattern and established townscape of the surrounding area, including the ratio of built to unbuilt space;

Not Applicable

- *not cause a loss of amenity to adjacent properties with regard to sunlight, daylight, outlook, overshadowing, light pollution/spillage, privacy/overlooking, and sense of enclosure;*

Proposal complies

20. A separate Daylight Assessment has been supplied which concludes the proposed extension would not have a material impact on the properties either side.
21. The submitted plans do not indicate windows along the flank walls of the rear extension.

22. The only new windows are to be located on the rear elevation, hence the proposal would not directly face neighbouring windows and therefore no overlooking would occur. Accordingly the proposal would comply with Policy DP26.

- *allow for the retention of a reasonable sized garden; and*
- *retain the open character of existing natural landscaping and garden amenity, including that of neighbouring properties, proportionate to that of the surrounding area.*

Not Applicable

Noise and disturbance

23. No new plant is proposed nor indeed any relocation of existing plant. Accordingly there will be no additional noise generated as a result of the proposed extensions.

Conclusions

24. The proposed rear extension would have no effect on the principal front elevation; the extension would be visible but, in our submission, well designed and of the right proportions to ensure it will appear subordinate to the existing building.
25. The overall appearance of the building has been designed to be in keeping with the Hampstead Conservation Area and the development will be sympathetic to the existing building both in terms of detailing and materials.
26. This would result in a building which would blend into the local streetscape and reinforce the wider townscape and result in an improvement to the existing rear facade.
27. The proposals would not have any material impact on the amenities of the occupiers of the two houses on either side.
28. In summary, the extensions and alterations proposed have been designed with careful regard to the relevant Policies of the adopted Development Plan and the relevant Design Guidance and in our submission comply with the applicable criteria set out in a preceding section to this Statement.
29. In summary it is considered that the proposal merits Officer support and the grant of conditional planning permission.
