Hassle-Free, Long-Lasting Waterproof Roofing

IKO Ruberseal EPDM is a BBA approved (Certificate No 15/5277)* high performance EPDM single-ply waterproofing system that is **quick and easy** to install and incredibly **long-lasting**. A variety of lengths and grades (**G Grade - standard, and FR Grade - Fire Retardant**) are available creating an exceptional weatherproofing protective solution for both new builds and refurbishment projects.

A Quality EPDM Membrane

At the heart of the system is the **IKO Ruberseal EPDM Membrane** (an unreinforced elastomeric waterproofing membrane). Black in colour, complimented by a textured surface on both sides with a thickness of 1.2mm, it is available on the roll or in bespoke pre-fabricated sheets jointed by heat weld technology in our state of the art facility at Clay Cross.

IKO Ruberseal EPDM membranes provides the ultimate in versatility, flexibility and performance. View our short informational video for further information:

IKO EPDM Ruberseal Roofing System Explained

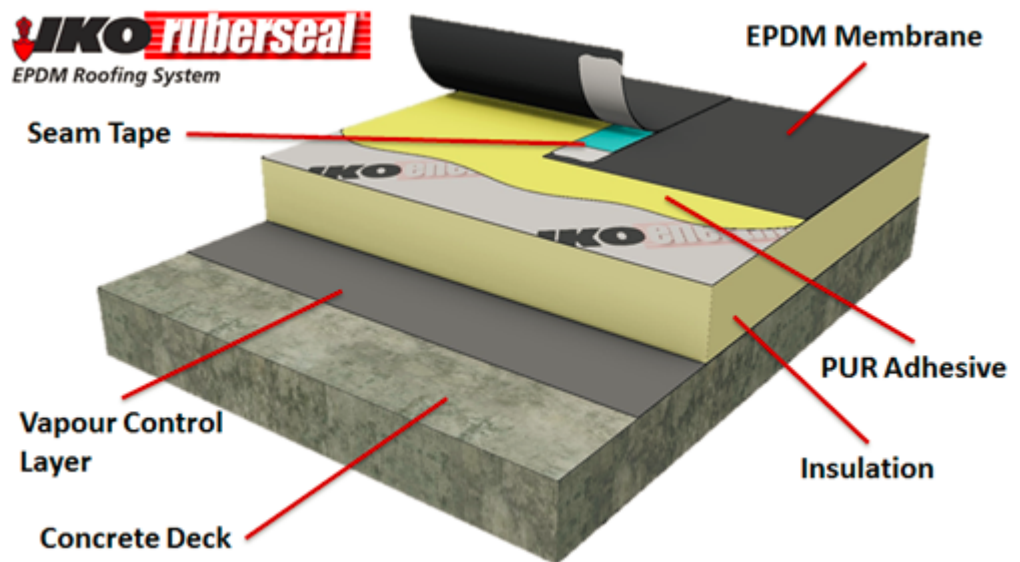

Cold Roof Installation

A typical cold roof system installation is depicted below:

Warm Roof Installation

Where a warm roof build-up is required, additional IKO materials can be incorporated to provide an all-encompassing solution:

Features & Benefits

- High quality **EPDM membrane**
- Available as a pre-fabricated one piece flat roof system* or in roll form
- Simple and quick to install
- UV resistant, durable and highly elastic (up to 300% elongation)
- Weatherproof in temperatures from -40°C to +150°C
- Contains no dangerous substances
- A range of complementary accessories are available
- Suitable for new buildings or refurbishments
- Minimal maintenance required
- Life expectancy of up to 40 years*
- Inherently root-resistant, ideal for use as part of a **green roof system**.

*FR Grade EPDM membrane only

The IKO Ruberseal EPDM Range Includes:

- **Membranes**
- **Tapes, Adhesives & Primers**
- **Other Accessories**
