| 2017/3593/L | Phebe Robinow | 28 Park Village East | 13/09/2017 13:31:54 | OBJ | We support all the comments made by members of the NIWG (Noise Insulation Working Group). The point most relevant to our situation from those made by the NIWG is that acceptance of only internal glazing, whether or not detrimental to the internal fabric of the building, would be a disaster for 28 PVE, both because we need working shutters for security and because, as the report points out, stucco, which is not original, can be easily replaced whereas old and original wooden shutters will be damaged if pinned back, plus our bookshelves would have to be torn away to accommodate the internal framework. |
