

Uplighters to the trees

Lighting types

The lighting is functional, providing safe movement through the development.

Key lighting types are:

- 1. Light columns (3 or 4 metre high columns - to be confirmed) with four separate LED directional fittings; with anti-glare louvres and asymmetrical refractors; the fittings allow controlled light, stopping light spill into the units whilst giving enough light for facial recognition for CCTV
- 2. Integral lighting strips to the raised planters/seating edges - low-level lighting to highlight these features
- 3. Uplighting to the trees - as a highlight feature (to be on a timer system).

The lighting is to be programmable, with control located in the concierge facilities.

The external lighting complements wall and soffit-mounted light fittings to the building entrances, and soffit/wall-mounted lighting to the entrance from Gray's Inn Road.
