Question	Technicians Answer
Risk Assessment- Presence of:	Children or Vunerable adults
Evidence of infestation	N/A
Level of infestation inspected:	All Clear
Hygiene	Fine- No Comments
Additional Recommendations	None/ Not applicable
Job Report Further Notes:	
Initial treatment required? Explain	na
Price quote for initial treatment & set up	Na

Completion Notes:

surveyed the property today, building is not having a complete basement dug out, as it's under Camden council guidelines that it's a certain depth that counts as basement, but the garden area is being lowered down by 0.6m, and outbuilding is being knocked down amd new one out in its place slightly shorter but wider

customer has had no issues with rodents but mainly with ants, which is largely around boiler area with all the pipe work

for rodent treatment 4-6 external bait stations in garden would suffice but there are 2 children living at property aswell

Job Card Accurate. Job Completed Successfully.

IMPORTANT: Chemicals used in our insect treatments require several hours to dry. Do not re-enter the property until area is totally dry. If on return items are wet or damp to touch, open windows and doors to ventilate property and leave until totally dry.

Note: Chemical safety data sheets can be provided at request. Please call on 0330 053 9003 or email enquiries@jgenvironmental.co.uk
