Pears Building, Royal Free Hospital, London

Peter,

Further to your recent request, and linked to the S106 for the above Application Number 2014/6845/P, I write to confirm that Heyne Tillett Steel are appointed as structural design consultants to design the permanent structure and monitor the construction works throughout their duration in relation to the above property.

As required by the S106 and Camden's guidelines, Heyne Tillett Steel will act as the Basement Design Engineers. In our professional opinion, we confirm, that best endeavours have been used to ensure that the design of the basement and the Detailed Basement Construction Plan are in accordance with the S106 agreement and appropriate conservative modelling relating to the local ground conditions, water environment and structural condition of neighbouring properties has been incorporated into the final design.

Yours sincerely
