Suppliers of Leaded Lights in London

Based in London, UK we undertake work ranging as traditional leaded lights and stained glass manufacturers and suppliers, from supplying leaded light glass to the public up to supplying the pub trade, Church Windows etc. We also fit the glass/windows ourselves if required.

We are the sole manufacturer of future units and hold the following patents;

- British Patent No. 2188359
- European Patent No. 0243017
- German Patent No. P3782269.1

Leaded Lights

We have been manufacturers of traditional lead lights since 1963.

We can manufacture lead lights from your own design or you can visit us and view some of the designs we have here. We have a large range of glass and coloured glass on display and will be happy to discuss your requirements with you.

We can manufacture a range of lead lights from basic cabinet lights, doors, windows, right up to large one-off designs as seen in churches and pubs.

Traditionally, leadlight windows differ from stained glass windows principally in being less complex in design, using simpler techniques and being far less expensive. While stained glass windows are found principally in churches and ornate buildings, leadlight windows are common, and from 1860 to 1930 were a regular architectural feature in many private houses and cottages, where their style is often a clue to the age of the building.

Unlike stained glass windows which are traditionally pictorial or of elaborate design, traditional leadlight windows are generally non-pictorial, containing geometric designs and formalised plant motifs. Leadlight windows almost always employ the use of quarries, pieces of glass cut into regular geometric shapes, sometimes square, rectangular or circular but most frequently diamond shaped, creating a "diaper" pattern. The colours employed in leadlight windows may range from delicate pastels to intense hues. The glass used may be textured or patterned or bevelled. However, since they are generally non-pictorial, and are primarily to illuminate the interior, with or without a decorative function, the glass is usually of pale hue, or transparent.

Bevel Designed Glass in London

Future Units have the beauty of leaded light with the benefits of a double glazed unit. Whilst this site gives you an insight into our work as stained glass manufacturers and suppliers, you are welcome to visit our premises in London, UK where we have a large number of bevel designs, types of glass and samples of work in traditional leaded lights.
