

The Post Building; North West Corner Retail Unit - Access Strategy

There will be two entrances to the retail unit. One to the north and one to the north-west corner. Due to the level changes of the pavement outside, it would be necessary for the north-west entrance to be stepped. The northern entrance is level, as is the remainder of the retail unit inside. The entrances are within close proximity of one another (approximately 13.6m).

To provide an equal and inclusive experience for all staff and visitors to this retail unit, the following will be put into place when the unit is in operation:

- The northern (step-free) entrance will be designated as the main entrance for the retail unit, and signage will be provided to identify it as such;
- Signage would be provided at the stepped entrance to identify the location of the step-free entrance; and
- If, for any reason, only one entrance is to be use in the future, then the northern entrance will be the one that remains operational.
