The Francis Crick Institute

External Post Mounted Sign

Version 4 - 28 June 2017

Type 1 External Post Mounted Sign

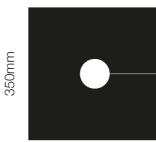

Specification

Fabricated Aluminium Box Sign - 4 Sided. Supplied With Coated Aluminium RAL Black Face Panels To Match Existing External Signage, All Visible Faces To Be Coated With High Grade Automotive Paint.

Applied High Resolution Print & Cut Graphics To Face With Applied Clear Coat Lacquer To Provide Anti-Vandal Finish.

Supplied With Internal Subframe & Mounting Baseplate Suitable For Mounting To Existing 80mm Lampost. To Be Mounted With 1000mm Ground Clearance. Mechanical Fixing Into Existing Lampost Required.

350mm

80mm Diameter Hole For Mounting Around Lampost

Paradigm Conrad Shawcross, 2016

Commissioned by the Francis Crick Institute and funded by Wellcome, Paradigm is one of the tallest sculptures in central London. At an imposing 14 metres, it comprises a twisting stack of tetrahedra that grow in size.

Thomas Kuhn's theory of the 'paradigm shift' provides a starting point for Shawcross' work for the Crick. Kuhn. an American philosopher of science, believed that scientific advancement does not progress in a seamless linear fashion. but rather through massive shifts that lead to breakthroughs, which change the course of thought, comprehension and application.

Paradigm provides a metaphor for potential: to grow; to advance; to discover. Its majestic form embodies boldness and courage whilst the weathering steel it is made from gives a respectful nod to the industrial heritage of the area.
