CONTENTS

EXECUTIVE SUMMARY

Capital Start Ltd has submitted a planning application for the redevelopment of 135-149 Shaftesbury Avenue, currently a standalone cinema (Use Class D1) located within the London Borough of Camden.

The proposed development is to provide a comprehensive refurbishment of the existing Grade II Listed building and the provision of a new 2 storey roof extension, new basement level to provide a 94-bed hotel (Class C1), four-screen cinema (Class D2), spa (sui generis), restaurant/bar (Class A3/A4) and roof top bar (Class A4).

The proposals and its site location along with the development type and scale ensure that the proposals support both national and local transport policy.

The site is well placed to encourage travel to the site to be undertaken by sustainable modes. The development proposals include a car-free scheme with no on-site parking provided. The development site is located in close proximity to existing public transport facilities given its PTAL 6b rating, as well as being accessible via both walking and cycling. Cycle parking is to be provided in accordance with LB Camden requirements.

The application represents an opportunity to enhance the site use along with the surrounding highway. Large vehicles including fire tenders, refuse and delivery vehicles can safely get within an appropriate distance of the proposed development. To improve the site further, it is proposed to include the provision of an on-footway layby facility for servicing and pick-up & drop-offs along the frontage of the site on Shaftesbury Avenue, whilst to the rear of the site, the relocation of the existing resident permit parking bays onto the adjacent side of New Compton Street is proposed, which in turn enables a dedicated loading bay to be provided.

A trip generation assessment has been undertaken which demonstrates that the trip generation associated with the proposed development will not have a negative impact on the surrounding transport network, and that the majority of daily trips will be undertaken utilising the sustainable modes of transport available.

The proposal will also include the adoption of a Travel Plan, Service Management Plan and Construction Management Plan, for the proposed use, in order to safely manage and mitigate the impacts of staff and visitor travel habits, the arrangements for servicing and deliveries, as well as vehicles associated with the construction period.

In summary, the site is considered to be suitably located for the proposed scheme, particularly in regards to sustainable modes of transport. The assessment undertaken within this report demonstrates that the proposed development will not have a significant or detrimental impact upon the local transport network. In view of the above we consider that there are no grounds to object to the application in terms of highways and transportation.

1. INTRODUCTION

1.1 This Transport Assessment (TA) has been produced by Iceni Projects Ltd on behalf of Capital Start Ltd in support of a planning application for the redevelopment of 135-149 Shaftesbury Avenue (the site). The site is located on the north side of Shaftesbury Avenue and comprises a standalone Listed Grade II building within cinema (Class D1) use.

1.2 The description for the proposed development is as follows;

The proposed development would result in the comprehensive refurbishment of the existing Grade II listed building and the provision of a new 2 storey roof extension and new basement level to provide a 94-bed hotel (Class C1), four-screen cinema (Class D2), spa (sui generis), restaurant/bar (Class A3/A4) and roof top bar (Class A4). The proposals would be car-free.

1.3 This assessment is informed by the requirements of London Borough of Camden Council (LBCC) as planning authority and principally follows the Transport for London (TfL) 'Best Practice' guidance document dated April 2010. The report has also been undertaken in accordance with the Department for Transport (DfT) document 'Transport evidence bases in plan making' (October 2014), which forms part of the Planning Practice Guidance.

1.4 Relevant policy guidance which has been considered includes the following documents:

- National Planning Policy Framework (NPPF);
- National Planning Practice Guidance (NPPG) – March 2014;
- The London Plan
- Emerging London Plan
- Camden Local Plan 2017
- Camden Planning Guidance CPG7 – Transport

1.5 The report is arranged as follows:

- **Section 2** provides an assessment of the existing site conditions, incorporating a description of the existing site use, local highway network, public transport accessibility, cycling and walking facilities and a highway safety assessment;
- **Section 3** provides a description of the development proposals, including access, servicing and refuse collection arrangements;
- **Section 4** considers the trip generation associated with the development site;

- **Section 5** provides a review of national, regional and local development and transport planning policy relevant to the location, scale and type of proposal; and
- **Section 6** sets out a summary and draws conclusions.

2. THE SITE AND SURROUNDING AREA

Site Description

2.1 The application site is located on the northwest side of Shaftesbury Avenue and is currently used as a cinema (Class D1). The area surrounding the site comprises of a mix of uses such as small businesses including local shops, bars and restaurants, professional business services, and residential dwellings.

2.2 The site is situated near to various throughways and desire lines which provide links to the shopping facilities, various forms of public transport and into Covent Garden where various leisure facilities and local amenities are available.

2.3 The site is bounded by New Compton Street, St Giles Passage, Shaftesbury Avenue and to the Stacey Street. A site location plan is shown at **Figure 1** below.

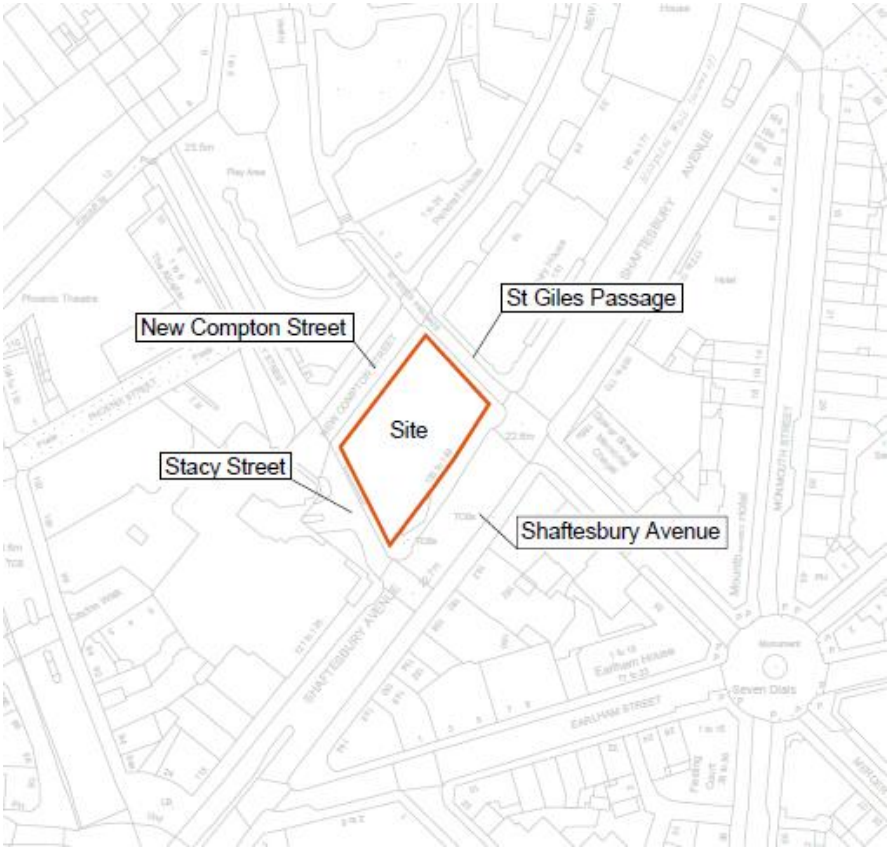

Figure 1: Site Location

Local Highway Network

Shaftesbury Avenue

2.4 Shaftesbury Avenue is a two-way single carriageway road running in a southwest – northeast direction. Within the vicinity of the site, the road is circa 9m wide, with footways and street lighting present. Crossing facilities, including zebra and signalised crossings, as well as dropped kerbs with tactile paving, are situated along the road which enables safe crossing paths for pedestrians accessing the various shop, restaurant and employment uses that are served directly from Shaftesbury Avenue. The road is subject to a 30mph speed restriction and a double yellow line parking restriction.

New Compton Street

2.5 New Compton Street is a circa 6m wide two-way single carriageway which abuts the northern boundary of the building / site. The road is subject to a 20mph speed limit and double yellow line restrictions, where on-street parking is not present.

2.6 Immediately adjacent to the site on-street parking exists on the southern side of the road for residents only, although this is in contrast to other parts of New Compton Street where the resident permit parking is on the northern side of New Compton Street. It is proposed to amend this as part of the proposed servicing strategy, further details are provided in section 3 of this report.

2.7 Adjacent to the site on New Compton Street is the Phoenix Garden, a community garden and registered charity, managed by volunteers, providing a habitat for urban wildlife and a privately managed space open to the public.

St Giles Passage

2.8 St Giles Passage abuts the eastern boundary of the building / site running in a north – south direction over approximately 55m. The road is 2.7m wide between two footways and is subject to a double yellow line parking restriction.

Stacey Street

2.9 Stacey Street is a circa 4m two-way single carriageway road subject to a 20mph speed limit and double yellow parking restriction, prohibiting parking at any time. It is also signposted to the south of Stacey Street near to the junction with Shaftesbury Avenue that no loading can occur between 8am – midnight. The road is subject to a 20mph speed limit and footways exist on both sides of the carriageway.

2.10 On the western side of Stacey Street is no.125 Shaftesbury Avenue. This site has been the subject of a planning application (ref: 2016/5202/P) for a Commercial Change of Use with Extension. This includes the remodelling, refurbishment and extension of the existing office building (Class B1) at

upper floor levels, roof level and within lightwells to provide 9,682sqm additional floorspace, including terraces, a new public route, a relocated office entrance (Charing Cross Road), rooftop plant and flexible retail uses (Classes A1/A3), along with associated highway, landscaping and public realm improvements. The Development would provide an off-street service yard at surface level, and a basement delivery bay.

LB Camden's West End Project

2.11 Consideration of the West End Project has also been undertaken, a scheme which was approved by Camden's Cabinet on 21 January 2015.

2.12 The project proposes to redevelop the Tottenham Court Road area, in order to improve safety, reduce pollution, widen pavements and improve journey times. With the Tottenham Court Road Crossrail station opening in December 2018, there will also be an increase in the number of people to the area.

2.13 The West End project aims to remove the one-way system operating on Tottenham Court Road, Gower Street, Bloomsbury Street and Charing Cross Road and replace it with two-way streets and protected cycle lanes. The proposals will therefore generate business and create new public spaces.

Public Transport

Public Transport Accessibility Levels (PTAL)

2.14 Public transport accessibility for sites within London is measured by using the methodology set out within TfL's 'Measuring Public Transport Accessibility Levels – April 2010' guidance document. The PTAL is measured using a range between 1a (Very Poor) to 6b (Excellent) as shown within Table 3 of the TfL guidance document shown below.

Table 3 Public Transport Accessibility Levels

PTAL	Range of Index	Map Colour	Description
1a (Low)	0.01 – 2.50		Very poor
1b	2.51 – 5.00		Very poor
2	5.01 – 10.00		Poor
3	10.01 – 15.00		Moderate
4	15.01 – 20.00		Good
5	20.01 – 25.00		Very Good
6a	25.01 – 40.00		Excellent
6b (High)	40.01 +		Excellent

2.15 It has been identified that the proposed development site has a PTAI (Public Transport Accessibility Index) score of 83.72 which in context of the Index Range gives the site a PTAL score of 6b (Excellent). The summary of the PTAL report is attached as **Appendix A1**. Full details on public transport available within the vicinity of the site are provided below, which demonstrates this good level of access available.

Rail Services

2.16 PTAL calculation assumes that people will walk up to 960m (approximately 12m) to a rail or tube service. The closest rail station to the development is London Charing Cross, which is approximately 850m south east of the site.

2.17 London Charing Cross Station operates on the Southeastern line providing a service across London, Kent and parts of East Sussex. A full network map showing destinations available from London Charing Cross is attached at **Appendix A2**.

2.18 Furthermore, three London Underground stations are within the vicinity of the site which provides frequent services to a range of destinations throughout London. Taking each of these stations in turn:

- Leicester Square Underground Station is located approximately 300m south of the site and is served by the Northern and Piccadilly Line. This station can be accessed by a four-minute walk from the site.
- Covent Garden Underground Station is located approximately 400m south of the site and is served by the Piccadilly Line. The station can be access by a five-minute walk from the site.
- Tottenham Court Road Underground Station is located approximately 400m north of the site and is served by the Central and Northern Line. This station can be accessed by a five-minute walk from the site.
- Piccadilly Circus Underground Station is located approximately 650m south-west of the site and is served by the Bakerloo and Piccadilly Line. The station can be accessed by a nine-minute walk from the site.

2.19 It is therefore considered that the site has good levels of access to a wide range of rail services providing frequent connections both to London and the possibility of onward travel on a national scale.

Bus Services

2.20 The provision of bus based public transport in the area has been assessed in terms of access to routes and frequencies of services, in addition to the quality of bus infrastructure within the area. It should be noted that the PTAL calculation assumes that people will walk up to 640m (approximately eight minutes walking distance) to a bus service.

2.21 A range of bus stops serving various destinations across the city are located along Shaftesbury Avenue, Charing Cross Road and Tottenham Court Road. 14 bus services are accessible within 400m (a 5-minute walk) of the site, which operate to a range of destinations seven days a week. These services are shown at **Figure 2** below, which is taken from TfL's central London bus map.

The full plan is included at **Appendix A3**. Furthermore, an additional 15-night bus services are accessible within 400m of the site.

Figure 2: Bus Route Map

Pedestrians

2.22 The area surrounding the site has good pedestrian links with an established network of footways. Within the vicinity of the site, footways are of adequate width and sufficiently lit, providing good quality, safe connections to the surrounding area.

2.23 A number of safe crossing facilities are located within the vicinity of the site, including a zebra crossing along the site frontage and a signal controlled crossing approximately 100m south-west at the Cambridge circus Junction. All major roads and junctions in the area have some form of pedestrian crossing facilities such as signal controlled crossings, zebra crossings, dropped kerbs and tactile paving in order to further ensure safe access and crossing of the road.

2.24 Within the vicinity of the site there are a range of amenities within walking distance, including numerous theatres, shops, restaurants, bars and cafes. There is also a good range of public transport facilities located close by, as described earlier in this section.

2.25 It is therefore considered that there is good opportunity to undertake a number of trips by walking, for all if not some of the journey.

Cycling

2.26 Within the vicinity of the site there are a number of routes signed for use by cyclists, including Shaftesbury Avenue. In addition, there also a number of quieter roads within the surrounding area that have been recommended for use by other cyclists. A cycle route plan detailing these routes is shown at **Appendix A4**.

2.27 Furthermore, there are numerous cycle docking stations located within the vicinity of the site. The nearest docking station is located approximately 250m south east of the site at the Old Compton Street / Moor Street junction. There are also a number of additional docking stations in the vicinity of the site, including a further two within 450m.

Car Club Spaces

2.28 There are a number of 'Zipcar' Car Club spaces located within the vicinity of the site. One space is located along Shaftesbury Avenue approximately 80m east of the site, with a further space located at 450m north of the site at Soho Square. It is therefore considered that there is a good existing provision of car club spaces within the vicinity.

2011 Census Data

Travel to Work Workday Population

2.29 The 'travel to work workday population' 2011 Census Data for the middle super output area 'Camden 028' (which the site is located in) has been obtained. The results are summarised below:

Table 2.1 Travel to Work' Modal Share (2011 Census Data)

Method of Travel to Work	Camden 028
Underground, Metro, Light Rail, Tram	37.3%
Train	34.1%
Bus, Minibus or Coach	11.5%
Taxi	0.2%

Motorcycle, Scooter or Moped	1.2%
Driving a Car or Van	4.8%
Passenger in a Car or Van	0.4%
Bicycle	5.5%
On Foot	5%
Total	100.0%

NOTE: 2011 Census Data taken from Office for National Statistics Website in November 2016.

2.30 It can be seen from the **Table 2.1** above, that 93.4% of journeys to the area that the site is located in are undertaken by sustainable modes of transport, which is not unexpected given the location of the site and its proximity to facilities and other local amenities. It is therefore reasonable to assume that trips to the site will also be undertaken by sustainable modes.

Summary

2.31 It has been shown that the site is located in a highly accessible location with good footway and cycle links and is close to frequent bus, underground and rail services, which supply good area coverage. TfL has confirmed that the site has a PTAL of 6b which equates to excellent accessibility. The site therefore provides excellent opportunities to use modes other than the car and in particular will provide the opportunity to use sustainable modes of travel including walking and cycling.

3. PROPOSED DEVELOPMENT

3.1 The description for the proposed development is as follows;

The proposed development would result in the comprehensive refurbishment of the existing Grade II listed building and the provision of a new 2 storey roof extension and new basement level to provide a 94-bed hotel (Class C1), four-screen cinema (Class D2), spa (sui generis), restaurant/bar (Class A3/A4) and roof top bar (Class A4). The proposals would be car-free.

3.2 The hotel element of the scheme would be provided from first to sixth floors and would be setback from the front façade and parapet of the building. The upper two levels of hotel accommodation would be provided above the height of the existing parapet.

3.3 At ground level would the restaurant, as well as the hotel check in area and the entrance into the cinema at basement level via a large grand staircase. An informal 'pop up' space would also be provided at ground floor level to give the space life and flexibility for a range of cultural activities.

3.4 The cinema and spa would be provided at basement level with a large cinema lobby area providing access to the four screens. Providing the cinema lobby at basement level would ensure conflicts between hotel and restaurant guests would be minimised. It would also provide a sense of arrival for cinemagoers as they descend the grand staircase.

3.5 The proposed development will be car-free scheme. Cycle parking will however be provided for both staff and visitors. The provision of dedicated loading areas are provided for servicing, whilst coaches are to be prevented from accessing the site.

3.6 Any site works associated with the basement do not affect London Underground or Crossrail lines.

Site Access

3.7 Separate pedestrian accesses are proposed for the theatre and hotel/restaurant. Pedestrian access to the theatre/hotel/restaurant is located at the site frontage along Shaftesbury Avenue, in the south-eastern corner of the building. Given the site is located within close proximity of various modes of sustainable transport, it is proposed to provide a car-scheme and therefore no vehicular access will be created.

3.8 The proposed pedestrian entrances into the site are shown on the site layout plan included at **Appendix A5**. **Figure 3** below offers a snapshot of the access routes.

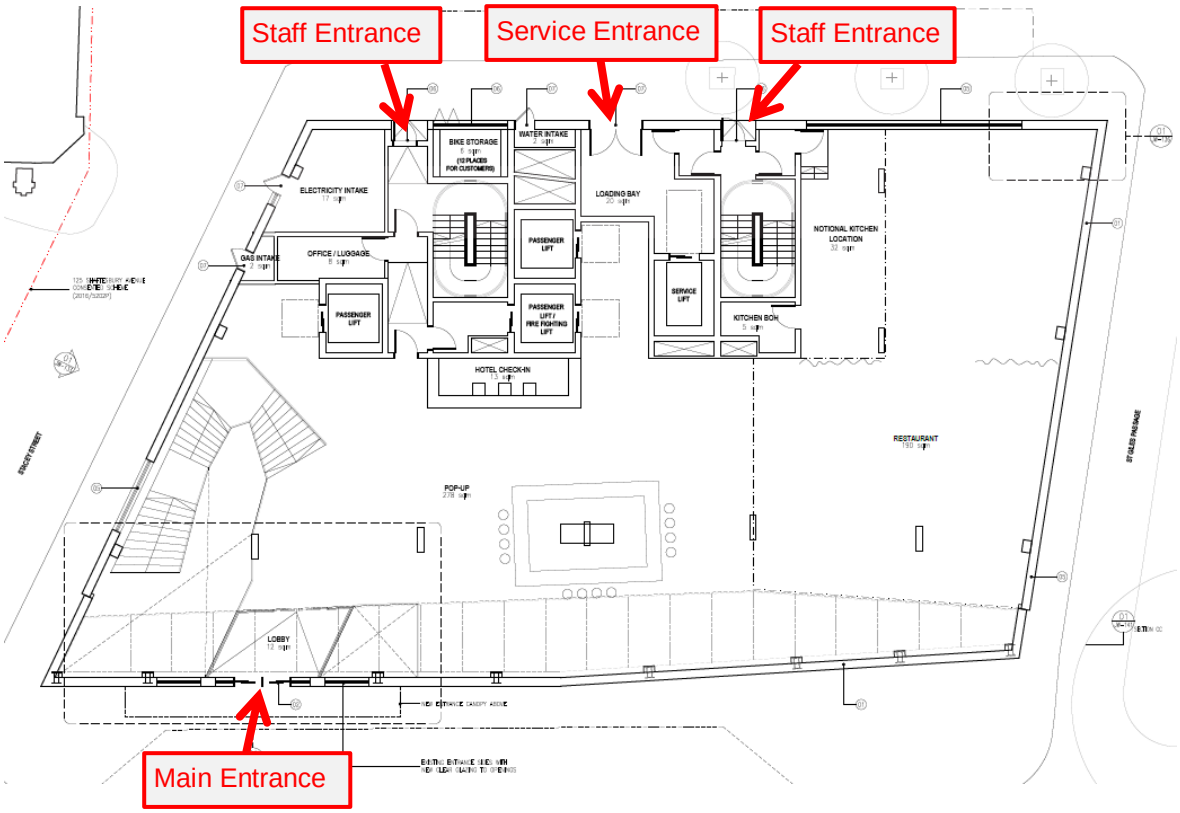

Figure 3: Proposed Access Routes

Parking Provision

3.9 As stated throughout this report, the development proposals include a car free scheme and therefore no car parking spaces are proposed.

3.10 As demonstrated in Section 2 of this report, the site is located within close proximity to existing public transport, in addition to having good local walking / cycling infrastructure. It has also been demonstrated through 2011 Census Data (see section/table) that people travelling to the area which the site is located in (Camden 028) do not travel by a private car, and therefore car parking spaces are not required. It is therefore reasonable to assume trips would not be undertaken by sustainable modes of travel.

Cycle Parking

3.11 The number of cycle parking spaces required for the Development accords with the LBC's policy requirements and are set out below. The total cycle spaces proposed for the Development are shown in Table 3.1.

Table 3.1 Application of LB Camden Cycle Parking Standards

Use	Minimum Requirement	Minimum Provision
C1 - HOTELS	Staff - from threshold of 500 sq m, 1 space per 500 sq m or part thereof. Resident - from threshold of 500 sq m, 1 space per 500 sq m or part thereof.	11 Long Stay 11 Short Stay
A3 - RESTAURANTS AND CAFES A4 - DRINKING ESTABLISHMENTS	Staff - from threshold of 500 sq m, 1 space per 250 sq m or part thereof. Customer - from threshold of 500 sq m, 1 space per 250 sq m or part thereof.	1 Long Stay 1 Short Stay
D2 - RECREATION AND LEISURE	Staff - from threshold of 500 sq m, 1 space per 250 sq m or part thereof. Customer - from threshold of 500 sq m, 1 space per 250 sq m or part thereof.	3 Long Stay 3 Short Stay
TOTAL		15 Long Stay 15 Short Stay

NOTE: 2011 Census Data taken from Office for National Statistics Website in November 2016.

Staff cycle parking

3.12 The proposed uses of the development (Hotel, Cinema, Bar/Restaurant and Spa) will have access to the Staff Cycle store to the rear of the site, which has a provision for up to 15 spaces. This cycle store is available to all staff working in the development and accords with the long stay cycle parking requirements of LB Camden Council standards. These cycle spaces are accessed from the service access at the rear of the site.

3.13 Both cycle parking areas within the development are secure and can only be accessible by users of the development. The service lifts to both cycle parking areas are large enough to accommodate pedestrians and cycles.

Short stay cycle parking

3.14 The development will provide short stay parking for up to 15 cycles (i.e. 15no. Sheffield stands) near the front of the development. The location of the short stay spaces is conveniently located near the main entrance lobby. The spaces are also safe as passing pedestrian traffic on Shaftesbury Avenue offers natural surveillance. In addition, there are existing cycle parking spaces on Stacey Street, which are conveniently located for short term cycle parking for the development.

Servicing

3.15 As part of the proposed redevelopment of the site a more formal servicing strategy is proposed, given the ad hoc arrangements which are currently in place for the existing use. As part of this a Delivery & Servicing Plan is to be implemented (to be conditioned as part of any planning consent) with two intended locations for servicing; Shaftesbury Avenue and New Compton Street. An outline strategy for the proposed servicing arrangements has been submitted separately to this report

Shaftesbury Avenue

3.16 The development proposals include the provision of an on-footway layby facility for servicing and pick-up & drop-offs along the frontage of the site on Shaftesbury Avenue.

3.17 Following on site observations and measurements that were taken, the width of footway along the frontage of the site is 4m, which can be used to provide the layby. A build out at the priority junction of Stacey Street / Shaftesbury Avenue provides an additional 1m strip that can be used to provide the on-footway layby. **Figure 4** below shows the build-out.

Figure 4: Existing Build Out at Stacey Street / Shaftesbury Avenue Priority Junction

3.18 It is proposed to provide an on-footway layby facility which will prevent service vehicles and taxis parking on the Shaftesbury Avenue carriageway and obstructing traffic. **Figure 5** below shows an example of this type of layby facility, which is taken from the Tooley Street Case Study within TfL Kerbside loading guidance.

Figure 5: Tooley Street On-Footway Layby (example)

3.19 It can be seen from the above that the layby facility would be built at the same level as the footway, allowing it to be used as part of the footway when servicing is not being undertaken. In order to accord with the TFL Kerbside loading guidance document, 3m of footway is required. A total of 5m (footway and 1m strip available from build-out) can be used, and therefore a minimum 2m footway would be available behind the layby when servicing is not in operation, which is considered an acceptable width.

3.20 The proposed highway arrangement is shown below in **Figure 6**, with a copy of the full layout drawing attached at **Appendix A6**.

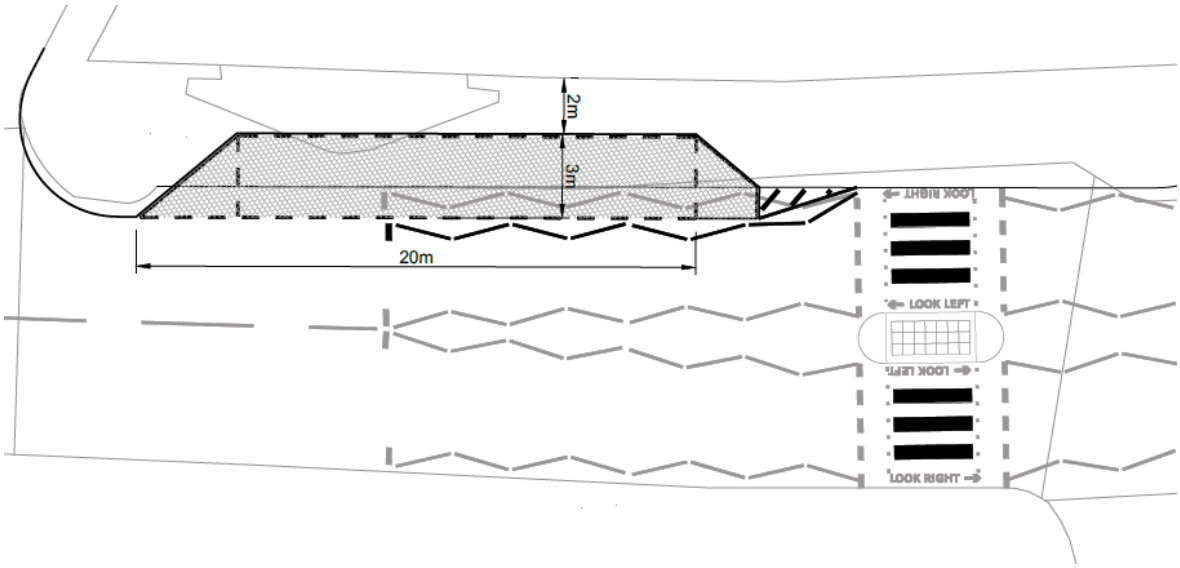

Figure 6: Proposed Highway Arrangement – Shaftesbury Avenue

3.21 In addition to the layby providing a safe and convenient area for service vehicle to arrive and depart from the site, it also provides a suitable area for pick-up and drop-offs, allowing vehicles such as taxis to wait off of Shaftesbury Avenue without affecting the through flow of traffic. The use of the layby for taxis would however be restricted to certain times of the day when no servicing movements are scheduled to occur at this location. Buses and coaches would not be permitted to use the facility at any time.

3.22 Similar arrangements are present on Shaftesbury Avenue to the west of the site, such as that shown below in **Figure 7**.

Figure 7: Existing Loading Bay on Shaftesbury Avenue (nr Wardour Street)

3.23 Camden High Street also has similar arrangements, as shown below in **Figure 8**.

3.24 In order to ensure that this option is feasible, the layby has been designed in accordance with TfL Kerbside loading guidance document and swept path analysis has been undertaken. The plan showing the proposed layby facility and associated SPA is included at **Appendix A6**. It has been demonstrated that a service vehicle is able to arrive and depart from the site in a forward gear.

3.25 It should be reiterated that some servicing of the existing use (cinema), including refuse collection, occurs along Shaftesbury Avenue and therefore providing the on-footway layby facility would improve existing traffic movements outside of the site.

New Compton Street

3.26 To the rear of the site, the relocation of the existing resident permit parking bays onto the adjacent side of New Compton Street is proposed. This aligns all of the resident permit parking bays to the northern side of New Compton Street, which in turn enables a dedicated loading bay to be provided. **Figure 9** below shows the existing arrangement, whilst **Figure 10** shows the proposed layout.

Figure 9: Existing Resident Permit Parking on New Compton Street

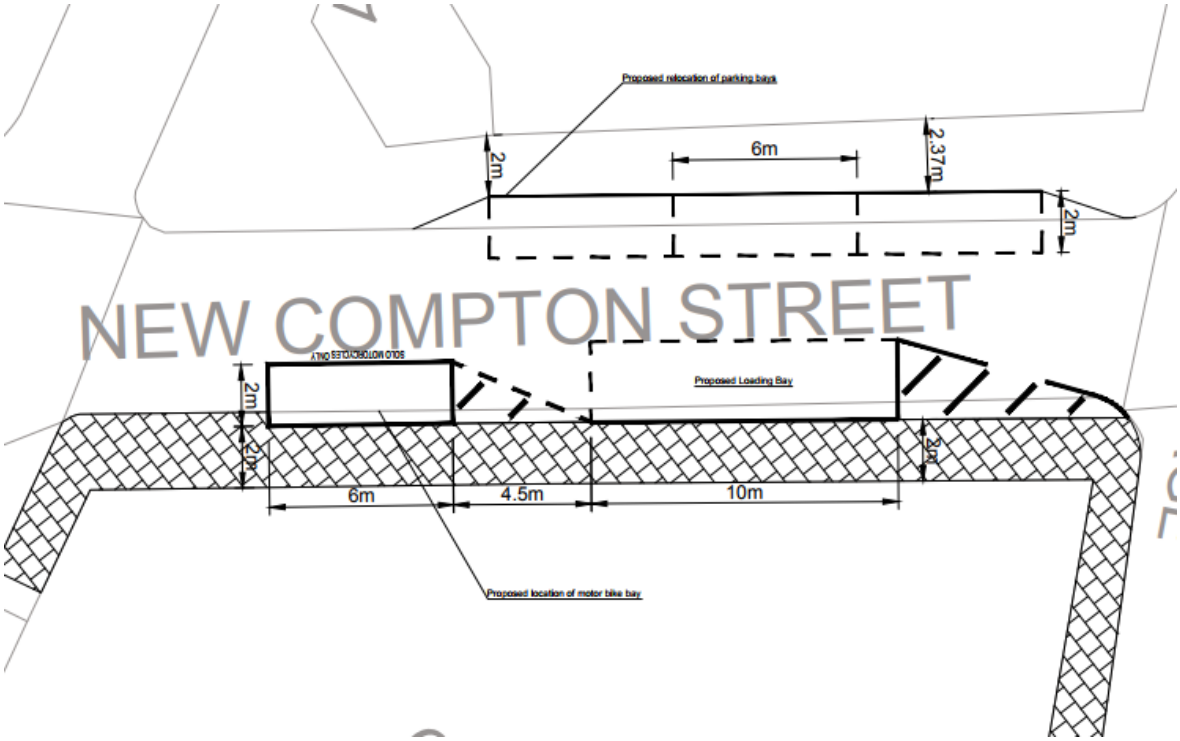

Figure 10: Proposed Highway Arrangement – New Compton Street

3.27 Again, the arrangement accords with the TfL Kerbside loading guidance document, provides a suitable footway width on both sides of New Compton Street and retains the same amount of existing car and motorcycle parking, which should therefore be considered acceptable

3.28 The plan showing the proposed arrangement and associated SPA is included at **Appendix A6**. It has been demonstrated that a service vehicle is able to arrive and depart New Compton Street at the rear of the site in a forward gear.

3.29 It should again be reiterated that servicing at the existing use (cinema), occurs along all sides of the site and therefore relocating the existing resident permit parking bays and motorcycle bay and providing the layby facility would improve existing traffic movements to the rear of the site.

Construction

3.30 An outline strategy for the Construction Management Plan has been submitted separately to this report. A summary of this is provided below.

3.31 We anticipate that construction will take up to 24 months, with the average number of vehicle movements per day during the respective construction phases expected to be as follows:

- **Demolition & Excavation:** Average of 15 loads per day (30 vehicle movements).
- **Construction:** Average of 10 loads per day (20 vehicle movements), peaking at 15 loads per day, i.e. 30 vehicle movements/per day.

3.32 Vehicle movements can be scheduled to occur at set times and therefore on average there would be two to three construction vehicle movements per hour. A range of delivery vehicles will be used to transport materials to and from the site, ranging from articulated HGVs to transit vans.

3.33 Appropriate routes for construction traffic to and from the site will be agreed with LB Camden and TfL prior to commencement of the works. Vehicles will be required to access the loading areas on Shaftesbury Avenue and New Compton Street.

3.34 Site working hours will be limited to Monday to Friday 08:00 to 18:00 hours. Weekend working is not envisaged but will be limited to 08:00 to 13:00 hours on Saturdays as required. Local residents within the vicinity of the site will be notified of any planned abnormal working hours issues.

3.35 Construction vehicle movements are to be coordinated and controlled through the Site Manager. There will be no deliveries before 08:00 daily, and no deliveries after 18:00.

3.36 Contractors will be employed who are registered under the ‘Considerate Constructors Scheme’. A Site Manager will be appointed to oversee the construction phase. Local residents will be provided with contact details for the construction team and receive regular updates throughout the construction phase.

4. TRIP GENERATION

4.1 This section of the report will outline the existing and proposed trip generation associated with this development and explains how suitable trip rates for the existing and proposed site uses have been derived to assess the capacity of the surrounding highway network. This section will compare the multi modal trips of the existing and proposed development to assess if the proposed development will have any material transport impact.

Extant Trip Generation

4.2 This section of the report will calculate the trip rate and multi modal trips for the existing cinema use at the site. The TRICS database has been interrogated to find the multi modal trips generation for similar sites. However, when examining the TRICS database, only one similar site was available. Whilst it is not normally considered accurate to undertake trip generation assessment based on one survey, on this occasion it is considered acceptable given the site is an Odeon multiplex cinema in the same area, with the same PTAL rating. The TRICs outputs are included in **Appendix A7** along with the calculated trip rates. **Table 4.1** below presents the number of multi modal trips which could be generated from the existing use.

Table 4.1 Multi-Modal Trip Generation of Existing Odeon Multiplex

	Number of Two-Way Trips					
Hour	*Taxis*	*Goods Vehicles*	*Cyclists*	*Pedestrians*	*Public Transport*	*Total*
12:00-13:00	0	0	0	0	0	0
13:00-14:00	0	4	0	0	11	19
14:00-15:00	0	1	0	0	1	6
15:00-16:00	0	0	0	16	28	46
16:00-17:00	0	0	0	27	26	53
17:00-18:00	0	3	0	50	29	81
18:00-19:00	0	0	0	157	61	230
19:00-20:00	0	0	0	39	14	53
20:00-21:00	1	0	0	171	64	246
21:00-22:00	3	0	0	123	68	194
22:00-23:00	1	0	0	1	5	8
23:00-00:00	0	0	0	66	102	170
Total	*6*	*9*	0	650	410	1,107
Percentage	*0.5%*	*0.8%*	*0%*	*58.7%*	*37.0%*	*100%*

Notes: Based on 713 seats / 3,713m^2 GFA. Numbers may not calculate due to rounding.

4.3 As shown in **Table 4.1** above the majority of the trips that could theoretically be generated by the existing use of the site are by underground, train and on foot. As the site has no existing off-street parking there are no existing vehicular trips generated by the site, other than for servicing.

Proposed Trip Generation

4.4 The proposed development is for a 94-bed hotel, bar / restaurant and a four screen cinema. The following section of this report explains the trip generation of each of the proposed uses and compares the proposed and net trip generation.

Hotel

4.5 The TRICS database has been used to derive trip rates for the proposed hotel use of the site based on similar sites in London. The full TRICS output is included in **Appendix A7** of this report. **Table 4.2** below presents the number of multi-modal trips expected to be generated by the proposed hotel use.

Table 4.2 Multi-Modal Trip Generation of Proposed Hotel

	Number of Two-Way Trips					
Hour	*Taxis*	*Goods Vehicles*	*Cyclists*	*Pedestrians*	*Public Transport*	*Total*
07:00-08:00	0	1	1	7	9	27
08:00-09:00	1	0	0	14	27	57

Total Proposed Multi Modal Generation

4.9 **Table 4.5** overleaf shows the total overall multi modal trips of the proposed development comprising of Hotel (with spa), cinema and bar / restaurant.

Table 4.5 Total Proposed multi modal trip generation

Mode	AM Peak (08:00-09:00)			PM Peak (18:00-19:00)			Daily		
	Arrivals	Depart-ures	Totals	Arrivals	Depart-ures	Totals	Arrivals	Depart-ures	Totals
Public Transport	4	23	27	40	25	66	406	421	828
Taxi	1	1	1	2	2	4	41	41	81
Goods Vehicles	-	-	-	1	1	1	5	5	8
Bicycle	-	-	-	-	-	-	5	5	9
On foot	4	9	14	84	74	158	1,024	948	1,972
Total	13	43	57	137	118	255	1,666	1,616	3,283

Notes: Proposed hotel + cinema + bar/restaurant multi modal trips

4.10 As shown in **Table 4.5** above the vast majority of trips generated by the site are by bus, underground, train and on foot. There are a small number of vehicular trips generated in the AM and PM peak hour which are in relation to the residential use of the site. None of the other uses of the site will generate vehicular trips as the proposed does not provide any parking for the proposed retail and Spa use.

Multi Modal Trip Generation Net Impact

4.11 **Table 4.6** below shows the comparison in multi modal trips between the existing site use and proposed development during the weekday AM and PM peak hours, as well as daily.

Table 4.6 Total net multi modal trips

Mode	AM Peak (08:00-09:00)			PM Peak (18:00-19:00)			Daily		
	Arrivals	Depart-ures	Totals	Arrivals	Depart-ures	Totals	Arrivals	Depart-ures	Totals
Public Transport	4	23	27	23	13	37	221	196	418
Taxi	1	1	1	2	2	4	38	38	75
Goods Vehicles	-	-	-	-	-	-2	1	1	-1
Bicycle	-	-	-	-	-	-	5	5	9
On foot	4	9	14	59	49	108	684	639	1,322
Total	13	43	57	94	80	174	1,113	1,062	2,176

Notes: Comparison between Tables 4.1 and 4.5

4.12 As shown in **Tables 4.5 and 4.6** above, whilst an increase in the overall number of trips is expected as a result of the proposed development, the majority of trips are expected to be made by sustainable modes of travel and can be suitably accommodated without detriment to the surrounding transport network.

Summary

4.13 The trip generation assessment shows that whilst the proposed development does lead to an increase in multi modal trips generated by the proposed development, the majority of the change in trips is by active transport (walking and cycling) and public transport trips. Further, a large proportion of these trips would be linked with other uses nearby and therefore wouldn't be primary trips to the area.

4.14 The above trip generation assessment has also demonstrated that the proposed development scheme will generate a low-level of vehicular trips.

4.15 To summarise, the proposed car-free scheme, and the high level of accessibility of the site by sustainable modes, ensures that the proposed development is not attractive to car trips, with this not being the practical option for travel to the site. As such, the impact of the proposals on the local highway network is considered to be negligible, and would not have an impact on the existing daily fluctuations.

5. TRANSPORT POLICY

5.1 The proposed development is subject to both national and local planning policy guidance with respect to transportation and its impact upon the local environment and surrounding infrastructure. A number of policies are directly pertinent to this site and are set out below.

National Planning Policy Framework

5.2 The National Planning Policy Framework (NPPF), published in March 2012, supersedes all previous Planning Policy Statements (PPS) and Planning Policy Guidance (PPG) and sets out the Government's core principles for the planning system in England, identifying that the purpose of the planning system is to contribute to the achievement of sustainable development.

5.3 Paragraph 14 states that:

"At the heart of the National Planning Policy Framework is a **presumption in favour of sustainable development**, which should be seen as a golden thread running through both plan-making and decision taking.

For **plan-making** this means that:

- Local planning authorities should positively seek opportunities to meet the development needs of their area;
- Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change, unless:
  - any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole; or
  - specific policies in this Framework indicate development should be restricted.[9]

For **decision-taking** this means:[10]

- Approving development proposals that accord with the development place without delay; and
- Where the development plan is absent, silent or relevant policies are out-of-date, granting permissions unless:
  - any adverse impacts of doing so would significant and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole; or
  - specific policies in this Framework indicate development should be restricted.[9]

5.4 With regard to transport policy, the NPPF states in Paragraph 29 that:

> "Transport policies have an important role to play in facilitating sustainable development but also in contributing to wider sustainability and health objectives" and that "The transport system needs to be balanced in favour of sustainable transport modes, giving people a real choice about how they travel".

5.5 Paragraph 32 goes on to state that:

> "All developments that generate significant amounts of movement should be supported by a Transport Statement or Transport Assessment" and that "Plans and decisions should take account of whether:
>
> - The opportunities for sustainable transport modes have been taken up depending on the nature and location of the site, to reduce the need for major transport infrastructure;
> - Safe and suitable access to the site can be achieved for all people; and
> - Improvements can be undertaken within the transport network that cost effectively limit the significant impacts of the development. Development should only be prevented or refused on transport grounds where the residual cumulative impacts of development are severe".

5.6 As demonstrated in Section 2 of this report, the site provides good access for the use of sustainable modes of transport i.e. a number of amenities are within reasonable walking and cycling distance and there is good public transport infrastructure.

5.7 An assessment of the proposed movements associated to the land uses (as detailed in Section 4 of this report) demonstrates that the development will not generate significant movements and therefore would not have a negative impact on the surrounding transport and highway network.

National Planning Policy Guidance (NPPG) – March 2014

5.8 Information contained as part of the National Planning Policy Guidance (NPPG), provides advice for travel plans, transport assessments and statements in decision-taking.

> "Travel Plans, Transport Assessments and Statements are all ways of assessing and mitigating the negative transport impacts of development in order to promote sustainable development. They are required for all developments which generate significant amounts of movements."

5.9 This report follows the advice within the guidance and accords with providing the information which should be included as part of a Transport Assessment. A Travel Plan will be produced separately.

5.10 The site is located in an area with public transport accessibility providing opportunities for travel to be undertaken by modes other than the car.

5.11 The proposed development conforms with the NPPF policies being well located to the existing public transport facilities. The proposed development site is also well located to encourage cycle accessibility being adjacent to and linking with roads suitable for cycling.

London Plan

5.12 On the 10th March 2015, the Mayor adopted the Further Alterations to the London Plan (FALP). The FALP has been prepared primarily to address key housing and employment issues emerging from an analysis of census data released since the publication of the London Plan in July 2011.

5.13 On the whole, the amendments in Chapter 6 – Transport are not related to development policies, rather there is a firmer commitment for Transport for London / Local Authorities to deliver specific schemes and public transport, pedestrian and cycle infrastructure. The only amendments which relate to this application are the minimum cycle parking standards. With regards to cycle parking, the key change proposed is to introduce separate standards for all users, for short term (visitors) and long term (residents, staff etc).

5.14 There were further Minor Alterations to the London Plan (MALP) which were published on the 14th March 2016. These minor alterations reviewed the residential parking standards in parts of outer London with low public transport accessibility. As stated, the development proposals do not include any car parking provision.

Emerging London Plan

5.15 On 29th November 2017, the Mayor published the Draft new London Plan (the Mayor's spatial development strategy), which will form part of the development plan for Greater London. It is envisaged that the consultation period will be from 1st December 2017 through to 2nd March 2018. The Draft London Plan will go to Examination in Public (EiP) in autumn 2018 with final publication currently due in the autumn of 2019.

5.16 It's a strategic plan which shapes how London evolves and develops. All planning decisions should follow London Plan policies, and it sets a policy framework for local plans across London.

5.17 The current 2016 consolidation Plan is still the adopted Development Plan. However, the Draft London Plan is a material consideration in planning decisions. It gains more weight as it moves through the process to adoption, however the weight given to it is a matter for the decision maker.

5.18 The main ambition of the Draft London Plan is that 80% of all trips in London will be by foot, cycle, or public transport by 2041. The Plan provides a different approach as it specifies parking maximums, as opposed to parking minimums. The Plan wants the starting point for any development that is well connected to transit – or to future transit – to be 'car-free'.

5.19 In terms of pertinent Transport Policies in Section 10 of the Draft London Plan the following are the most relevant:

Policy T1 Strategic Approach to Transport

- Development Plans and development proposals should support:

  The delivery of the Mayor's strategic target of 80 per cent of all trips in London to be made by foot, cycle or public transport by 2041

  The proposed transport schemes set out in Section 10 (Table 10.1).

- All development should make the most effective use of land, reflecting its connectivity and accessibility by existing and future public transport, walking and cycling routes, and ensure that any impacts on London's transport networks and supporting infrastructure are mitigated.

5.20 Given the car free nature of the proposed development, staff and visitors of the scheme will utilise the public transport network and walking and cycling routes.

Policy T5 Cycling

- Development Plans and development proposals should help remove barriers to cycling and create a healthy environment in which people choose to cycle. This will be achieved through:
- supporting the delivery of a London-wide network of cycle routes, with new routes and improved infrastructure
- securing the provision of appropriate levels of cycle parking which should be fit for purpose, secure and well-located. Developments should provide cycle parking in accordance with the minimum standards set out in Table 10.2 and Figure 10.2, and should be designed and laid out in accordance with the guidance contained in the London Cycling Design Standards[144].
- Where it is not possible to provide suitable short-stay cycle parking off the public highway, the borough should work with stakeholders to identify an appropriate on-street location for the required provision. This may mean the reallocation of space from other uses such as on-street car parking. Alternatively, in town centres, adding the required provision to general town centre cycle parking is also acceptable. In such cases, a commuted sum should be paid to the local authority to secure provision.
- Where it is not possible to provide adequate cycle parking within residential developments, boroughs must work with developers to propose alternative solutions which meet the objectives of the standards. These may include options such as providing spaces in secure, conveniently-located, on-street parking facilities such as bicycle hangers.
- Where flexible commercial uses are proposed and exact uses are not determined at the point of application, the highest potential applicable cycle parking standard should be applied.
- Where the final land use of a development is not determined at the point of application, the highest potential applicable cycle parking standard should be applied.
- A minimum of two short-stay and two long-stay cycle parking spaces must be provided for all land uses in all locations with the exception of Class C3-C4 uses and Class A uses where the size threshold specified in Table 10.2 has not been met

5.21 Both short stay and long stay cycle parking will be provided as part of the proposed development.

Policy T6 Car Parking

A. Car parking should be restricted in line with levels of existing and future public transport accessibility and connectivity.
B. Car-free development should be the starting point for all development proposals in places that are (or are planned to be) well-connected by public transport, with developments elsewhere designed to provide the minimum necessary parking ('car-lite').
C. The maximum car parking standards set out in Policy T6.1 Residential parking to Policy T6.5 Non-residential disabled persons parking should be applied to development proposals and used to set local standards within Development Plans.
D. Appropriate disabled persons parking for Blue Badge holders should be provided as set out in Policy T6.1 Residential parking to Policy T6.5 Non-residential disabled persons parking.
E. Where car parking is provided in new developments, provision should be made for infrastructure for electric or other Ultra-Low Emission vehicles.
F. Adequate provision should be made for efficient deliveries and servicing.
G. A Car Park Design and Management Plan should be submitted alongside all applications which include car parking provision, indicating how the car parking will be designed and managed, with reference to Transport for London guidance on car parking management and car parking design.
H. Boroughs wishing to adopt borough-wide or other area-based car-free policies will be supported. Outer London boroughs wishing to adopt minimum residential parking standards through a Development Plan Document (within the maximum standards set out in Policy T6.1 Residential parking) must only do so for parts of London that are PTAL 0-1. Inner London boroughs should not adopt minimum standards. Minimum standards are not appropriate for non-residential land uses in any part of London.
I. Where sites are redeveloped, existing parking provision should be reduced to reflect the current approach and not be re-provided at previous levels where this exceeds the standards set out in this policy.

5.22 Car free development is proposed and therefore accords with policy T6.

Camden Local Plan 2017

5.23 The Camden Local Plan was adopted by the Council on 3 July 2017 and has replaced the Core Strategy and Camden Development Policies documents as the basis for planning decisions and future development in the borough. The development policies set out within this document provide detailed planning criteria that Camden use to determine planning applications for planning permission in the borough. The policies within this document that are pertinent to this proposal are identified below:

Policy T1 Prioritising walking, cycling and public transport

The Council will promote sustainable transport by prioritising walking, cycling and public transport in the borough.

Walking
In order to promote walking in the borough and improve the pedestrian environment, we will seek to ensure that developments:
a. improve the pedestrian environment by supporting high quality public realm improvement works;
b. make improvements to the pedestrian environment including the provision of high quality safe road crossings where needed, seating, signage and landscaping;
c. are easy and safe to walk through ('permeable');
d. are adequately lit;
e. provide high quality footpaths and pavements that are wide enough for the number of people expected to use them. Features should also be included to assist vulnerable road users where appropriate; and
f. contribute towards bridges and water crossings where appropriate.

Cycling
In order to promote cycling in the borough and ensure a safe and accessible environment for cyclists, the Council will seek to ensure that development:
g. provides for and makes contributions towards connected, high quality, convenient and safe cycle routes, in line or exceeding London Cycle Design Standards, including the implementation of the Central London Grid, Quietways Network, Cycle Super Highways and;
h. provides for accessible, secure cycle parking facilities exceeding minimum standards outlined within the London Plan (Table 6.3) and design requirements outlined within our supplementary planning document Camden Planning Guidance on transport. Higher levels of provision may also be required in areas well served by cycle route infrastructure, taking into account the size and location of the development; i. makes provision for high quality facilities that promote cycle usage including changing rooms, showers, dryers and lockers; j. is easy and safe to cycle through ('permeable'); and
k. contribute towards bridges and water crossings suitable for cycle use where appropriate.

Public Transport
In order to safeguard and promote the provision of public transport in the borough we will seek to ensure that development contributes towards improvements to bus network infrastructure including access to bus stops, shelters, passenger seating, waiting areas, signage and timetable information. Contributions will be sought where the demand for bus services generated by the development is likely to exceed existing capacity. Contributions may also be sought towards the improvement of other forms of public transport in major developments where appropriate.

Where appropriate, development will also be required to provide for interchanging between different modes of transport including facilities to make interchange easy and convenient for all users and maintain passenger comfort.

5.24 Whilst the proposals do not include making changes or improvements to local transport links, it has been demonstrated throughout this report that the site is situated in an extremely accessible location, where various sustainable transport links, including a number of walking and cycling routes, are available within a short walk. It has also been demonstrated that the site is located within close

proximity to a number of car club spaces, which further promotes travelling to the site by sustainable modes and not by a private car.

Policy T2 Parking and car-free development

The Council will limit the availability of parking and require all new developments in the borough to be car-free.

We will:
a. not issue on-street or on-site parking permits in connection with new developments and use legal agreements to ensure that future occupants are aware that they are not entitled to on-street parking permits;
b. limit on-site parking to:
i. spaces designated for disabled people where necessary, and/or
ii. essential operational or servicing needs;
c. support the redevelopment of existing car parks for alternative uses;
and
d. resist the development of boundary treatments and gardens to provide vehicle crossovers and on-site parking.

5.25 As stated, the proposed development does not include any on or off-street car parking spaces. It is not considered to have an impact on any of the above and therefore accords with the policy.

5.26 The site is located within central London, where various forms of public transport links are available. Therefore, to further prevent travel to the site being undertaken by the private car, no car parking is being provided. However, cycle parking is being provided as part of the development.

Policy T3 Transport infrastructure

The Council will seek improvements to transport infrastructure in the borough.
We will:
a. not grant planning permission for proposals which are contrary to the safeguarding of strategic infrastructure improvement projects; and
b. protect existing and proposed transport infrastructure, particularly routes and facilities for walking, cycling and public transport, from removal or severance;

5.27 The proposed development would not detrimentally affect local or strategic infrastructure, in terms of either the existing network or proposed improvement projects.

5.28 As stated, no car parking is being provided at the site and it is highly unlikely travel to the site will be undertaken via a private car. Therefore, the development traffic will not have a negligible impact on the existing highway network. With regards to vulnerable uses, provision will be made at each pedestrian access into the site.

Policy T4 Sustainable movement of goods and materials

The Council will promote the sustainable movement of goods and materials and seek to minimise the movement of goods and materials by road. We will:
a. encourage the movement of goods and materials by canal, rail and bicycle where possible;
b. protect existing facilities for waterborne and rail freight traffic and;
c. promote the provision and use of freight consolidation facilities.
Developments of over 2,500 sqm likely to generate significant movement of goods or materials by road (both during construction and operation) will be expected to:
d. minimise the impact of freight movement via road by prioritising use of the Transport for London Road Network or other major roads;
e. accommodate goods vehicles on site; and
f. provide Construction Management Plans, Delivery and Servicing Management Plans and Transport Assessments where appropriate.

5.29 Movement of goods and materials have been assessed for the most practical way the site can be serviced. As outlined within section 3 of this report, servicing will be undertaken within dedicated laybys at the front and rear of the site, which will cause minimal impact on traffic passing the site. Deliveries and servicing will be managed to ensure vehicles do not arrive at the site at the same time and cause obstruction. Furthermore, swept path analysis has been undertaken in order to ensure appropriate vehicles can arrive and depart from the site safely and efficiently.

Camden Planning Guidance CPG7 - Transport

5.30 The Camden Planning Guidance has been produced as a Supplementary Planning Document (SPD) to support the policies in the Local Development Framework (LDF). Chapter 7 of the document relates to Transport and covers the following;

1. Assessing transport capacity
2. Travel Plans
3. Delivery and Servicing Management Plans
4. Car free and car capped development
5. On-site car parking
6. Vehicle access
7. Streets and public spaces
8. Cycling facilities
9. Minicab offices.

5.31 The SPD has therefore been considered as part of this TA and the development proposals.

6. SUMMARY AND CONCLUSIONS

6.1 This Transport Assessment (TA) has been produced by Iceni Projects Ltd on behalf of Capital Start Ltd in support of a planning application for the redevelopment of 135-149 Shaftesbury Avenue (the site). The site is located on the north side of Shaftesbury Avenue and comprises a standalone Listed Grade II building within cinema (Class D1) use.

6.2 The description for the proposed development is as follows;

The proposed development would result in the comprehensive refurbishment of the existing Grade II listed building and the provision of a new 2 storey roof extension and new basement level to provide a 94-bed hotel (Class C1), four-screen cinema (Class D2), spa (sui generis), restaurant/bar (Class A3/A4) and roof top bar (Class A4). The proposals would be car-free.

6.3 This TA demonstrates that the development site is located in close proximity to existing public transport facilities, as well as being accessible via both walking and cycling. The site is, therefore, well placed to encourage travel to the site to be undertaken by sustainable modes.

6.4 The development site and its location along with the development type and scale ensure that the proposals support both national and local transport policy.

6.5 The development proposals include a car-free scheme and therefore no on-site parking is provided. Cycle parking is to be provided in accordance with LB Camden requirements.

6.6 Large vehicles including fire tenders and refuse vehicles can safely get within an appropriate distance of the proposed development.

6.7 A trip generation assessment has been undertaken which demonstrates that the trip generation associated with the proposed development will not a negative impact on the surrounding network, and the majority of trips will be undertaken utilising the sustainable modes of transport available.

6.8 The proposal will also include the adoption of a Travel Plan for the proposed use, which can be secured by way of a planning condition and will set out measures to promote sustainable travel and enforce the restrictions of travel to the site by private car.

6.9 The proposal will also include the adoption of a Construction Management Plan for the proposed use, which can be secured by way of a planning condition and will set out measures to manage and mitigate the impacts of construction, as well as enforce the restrictions to working hours and times for associated vehicle movements.

6.10 The proposal will also include the adoption of a Service Management Plan for the proposed use, which can be secured by way of a planning condition and will set out measures to safely and efficiently manage deliveries associated with the proposed uses at the site.

6.11 In summary, the site is considered to be suitably located for the proposed scheme, particularly in regards to sustainable modes of transport. The assessment undertaken within this report demonstrates that the proposed development will not have a significant or detrimental impact upon the local transport network.

A2. RAIL MAP

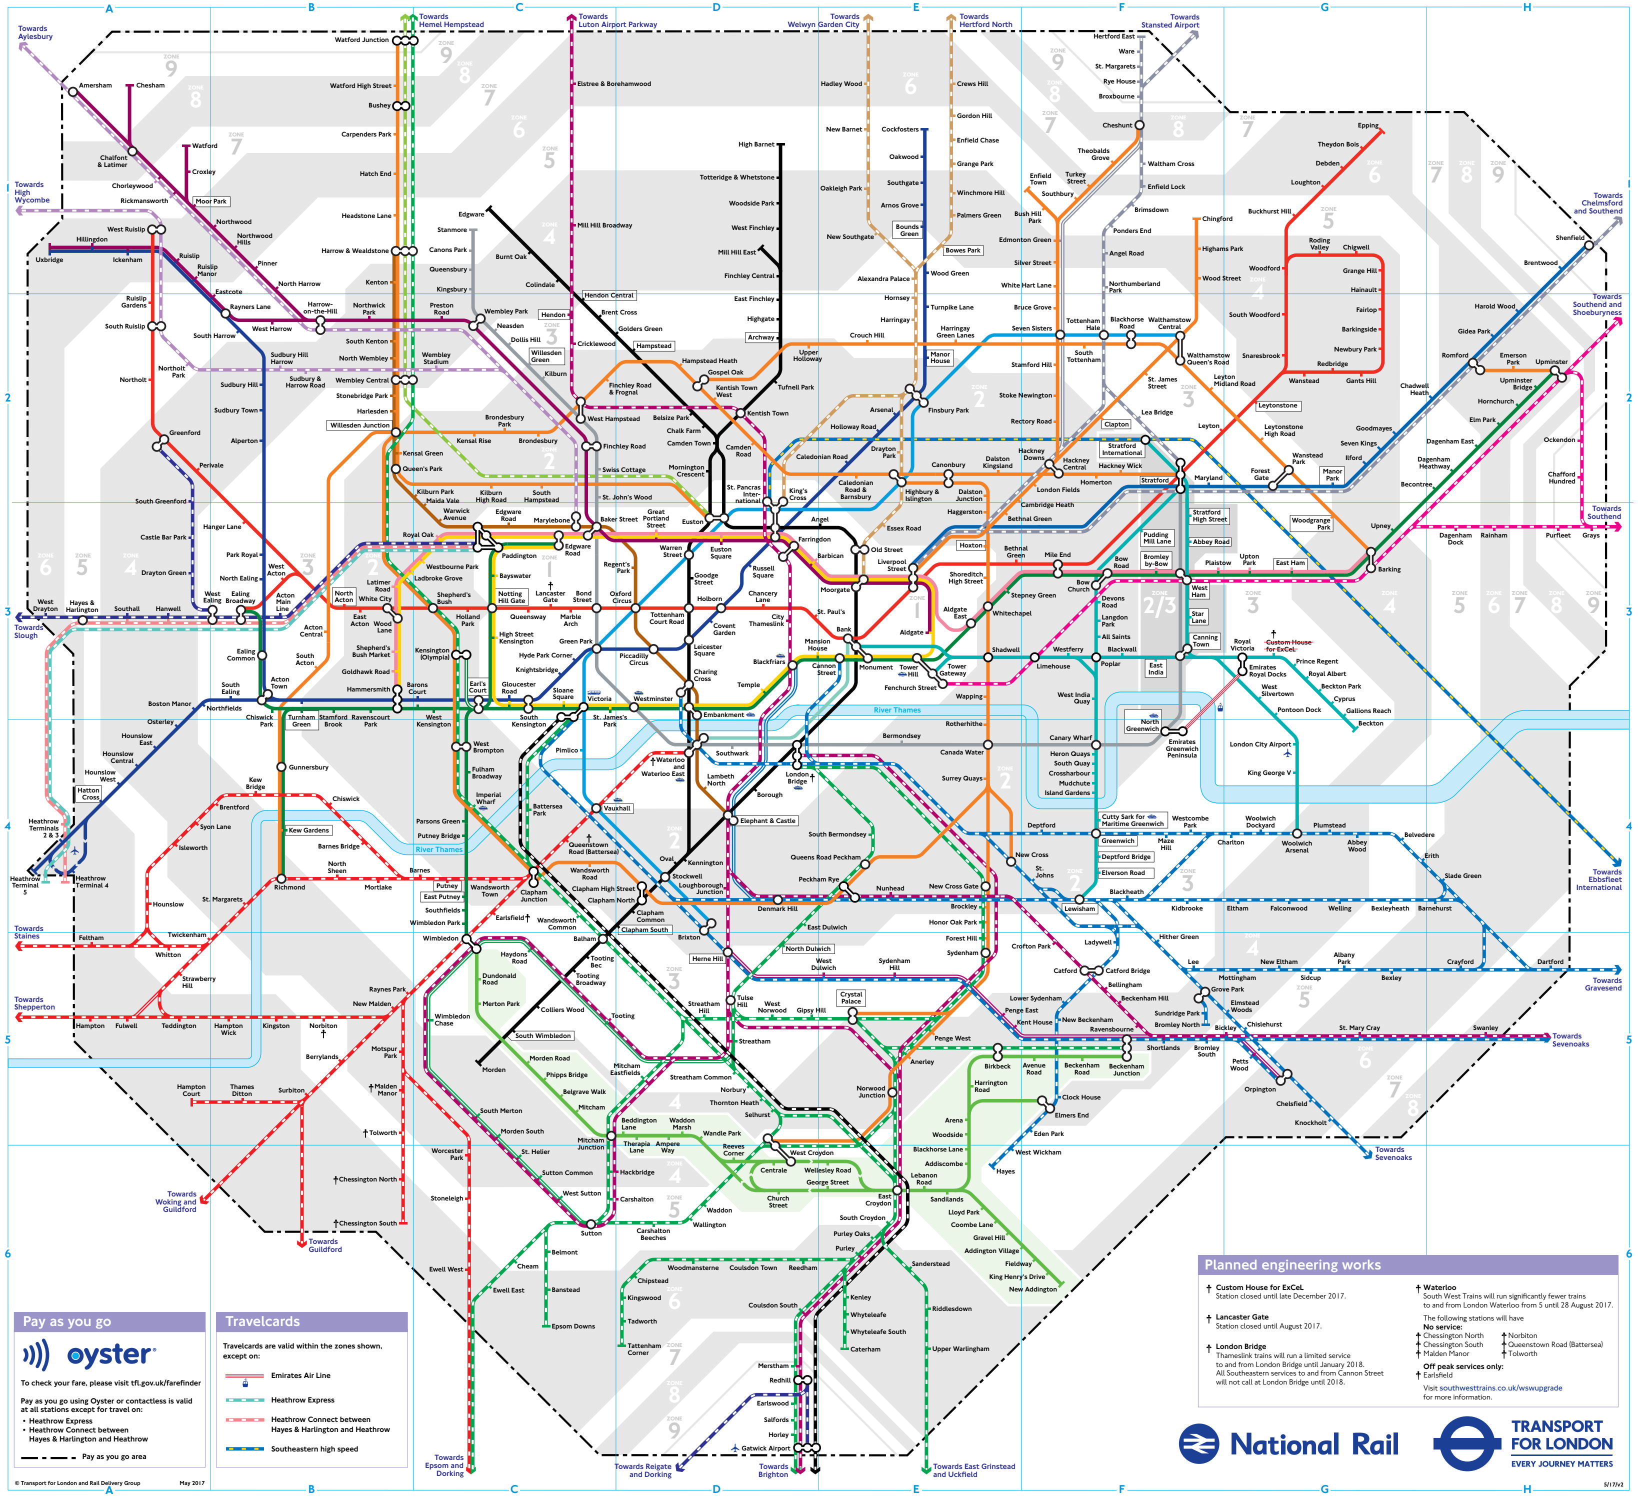
London's Rail & Tube services

Key to lines and symbols

- Bakerloo
- Central
- Circle
- District (limited service)
- Hammersmith & City
- Jubilee
- Metropolitan
- Northern
- Piccadilly
- Victoria
- Waterloo & City
- DLR
- London Overground
- London Trams
- TfL Rail
- Emirates Air Line cable car

- Chiltern Railways
- c2c
- Gatwick Express
- Great Northern
- Great Western Railway
- Greater Anglia (peak hours only)
- Heathrow Connect
- Heathrow Express
- London Midland
- Southern (peak hours only)
- Southeastern (peak hours only)
- Southeastern high speed
- South West Trains (peak hours only)
- Thameslink (peak hours only)

- London Trams fare zone
- Stratford — Station in both fare zones
- Interchange stations
- Airport
- Riverboat services
- Victoria Coach Station



Pay as you go

oyster

To check your fare, please visit tfl.gov.uk/farefinder

Pay as you go using Oyster or contactless is valid at all stations except for travel on:

- Heathrow Express
- Heathrow Connect between Hayes & Harlington and Heathrow

Pay as you go area

Travelcards

Travelcards are valid within the zones shown, except on:

- Emirates Air Line
- Heathrow Express
- Heathrow Connect between Hayes & Harlington and Heathrow
- Southeastern high speed

Planned engineering works

Custom House for ExCeL
Station closed until late December 2017.

Lancaster Gate
Station closed until August 2017.

London Bridge
Thameslink trains will run a limited service to and from London Bridge until January 2018. All Southeastern services to and from Cannon Street will not call at London Bridge until 2018.

Waterloo
South West Trains will run significantly fewer trains to and from London Waterloo from 5 until 28 August 2017.

The following stations will have
No service:
- Chessington North
- Chessington South
- Malden Manor
- Norbiton
- Queenstown Road (Battersea)
- Tolworth

Off peak services only:
- Earlsfield

Visit southwesttrains.co.uk/wswupgrade for more information.

A7. TRICS

Calculation Reference: AUDIT-751001-171219-1259

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 07 - LEISURE
Category : A - MULTIPLEX CINEMAS
MULTI-MODAL VEHICLES

Selected regions and areas:
01 GREATER LONDON
CN CAMDEN 1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of seats
Actual Range: 545 to 545 (units:)
Range Selected by User: 545 to 545 (units:)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/09 to 23/10/09

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:
Friday 1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:
Manual count 1 days
Directional ATC Count 0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:
Town Centre 1

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:
Built-Up Zone 1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:
D2 1 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:
50,001 to 100,000 1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Secondary Filtering selection (Cont.):

Population within 5 miles:
500,001 or More 1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:
0.5 or Less 1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:
No 1 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:
6b (High) Excellent 1 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1 CN-07-A-01 ODEON CAMDEN
TOTTENHAM COURT RD

BLOOMSBURY
Town Centre
Built-Up Zone
Total Number of seats: 545
Survey date: FRIDAY *23/10/09* *Survey Type: MANUAL*

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

23:00 - 24:00	1	545	0.000	1	545	0.004	1	545	0.004
Total Rates:			0.027			0.030			0.057

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	545 - 545 (units:)
Survey date date range:	01/01/09 - 23/10/09
Number of weekdays (Monday-Friday):	1
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

21:00 - 22:00	1	545	0.002	1	545	0.002	1	545	0.004
22:00 - 23:00	1	545	0.000	1	545	0.002	1	545	0.002
23:00 - 24:00	1	545	0.000	1	545	0.000	1	545	0.000
Total Rates:			0.004			0.004			0.008

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	545 - 545 (units:)
Survey date date range:	01/01/09 - 23/10/09
Number of weekdays (Monday-Friday):	1
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	545 - 545 (units:)
Survey date date range:	01/01/09 - 23/10/09
Number of weekdays (Monday-Friday):	1
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Parameter summary

Trip rate parameter range selected:	545 - 545 (units:)
Survey date date range:	01/01/09 - 23/10/09
Number of weekdays (Monday-Friday):	1
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 06 - HOTEL, FOOD & DRINK
Category : C - PUB/RESTAURANT
MULTI-MODAL VEHICLES

Selected regions and areas:

01	GREATER LONDON		
	CI	CITY OF LONDON	1 days
	HG	HARINGEY	1 days
	LB	LAMBETH	1 days
	WH	WANDSWORTH	1 days
03	SOUTH WEST		
	BR	BRISTOL CITY	1 days
06	WEST MIDLANDS		
	WO	WORCESTERSHIRE	1 days
08	NORTH WEST		
	LC	LANCASHIRE	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 220 to 1000 (units: sqm)
Range Selected by User: 175 to 2384 (units: sqm)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/09 to 20/05/17

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Tuesday	1 days
Wednesday	2 days
Thursday	2 days
Friday	1 days
Sunday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	7 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Town Centre	7

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Commercial Zone	1
Development Zone	1
Built-Up Zone	3
High Street	2

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

A4	6 days
C1	1 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

5,001 to 10,000	1 days
25,001 to 50,000	2 days
50,001 to 100,000	4 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

25,001 to 50,000	1 days
100,001 to 125,000	1 days
125,001 to 250,000	1 days
500,001 or More	4 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	2 days
0.6 to 1.0	4 days
1.1 to 1.5	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	7 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	3 days
6a Excellent	2 days
6b (High) Excellent	2 days

This data displays the number of selected surveys with PTAL Ratings.

Total Rates:			17.141			17.550			34.691

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	220 - 1000 (units: sqm)
Survey date date range:	01/01/09 - 20/05/17
Number of weekdays (Monday-Friday):	6
Number of Saturdays:	0
Number of Sundays:	1
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

19:00 - 20:00	7	523	0.082	7	523	0.055	7	523	0.137
20:00 - 21:00	7	523	0.000	7	523	0.027	7	523	0.027
21:00 - 22:00	7	523	0.000	7	523	0.082	7	523	0.082
22:00 - 23:00	7	523	0.000	7	523	0.027	7	523	0.027
23:00 - 24:00	7	523	0.000	7	523	0.000	7	523	0.000
Total Rates:			0.547			0.547			1.094

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	220 - 1000 (units: sqm)
Survey date date range:	01/01/09 - 20/05/17
Number of weekdays (Monday-Friday):	6
Number of Saturdays:	0
Number of Sundays:	1
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

20:00 - 21:00	7	523	0.000	7	523	0.000	7	523	0.000
21:00 - 22:00	7	523	0.000	7	523	0.000	7	523	0.000
22:00 - 23:00	7	523	0.000	7	523	0.000	7	523	0.000
23:00 - 24:00	7	523	0.000	7	523	0.000	7	523	0.000
Total Rates:			0.000			0.000			0.000

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	220 - 1000 (units: sqm)
Survey date date range:	01/01/09 - 20/05/17
Number of weekdays (Monday-Friday):	6
Number of Saturdays:	0
Number of Sundays:	1
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

21:00 - 22:00	7	523	0.027	7	523	0.000	7	523	0.027
22:00 - 23:00	7	523	0.000	7	523	0.027	7	523	0.027
23:00 - 24:00	7	523	0.000	7	523	0.000	7	523	0.000
Total Rates:			0.164			0.190			0.354

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	220 - 1000 (units: sqm)
Survey date date range:	01/01/09 - 20/05/17
Number of weekdays (Monday-Friday):	6
Number of Saturdays:	0
Number of Sundays:	1
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Calculation Reference: AUDIT-751001-171129-1139

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 06 - HOTEL, FOOD & DRINK
Category : A - HOTELS
MULTI-MODAL VEHICLES

Selected regions and areas:

05	EAST MIDLANDS		
	DS	DERBYSHIRE	1 days
08	NORTH WEST		
	GM	GREATER MANCHESTER	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 1200 to 3600 (units: sqm)
Range Selected by User: 1080 to 9850 (units: sqm)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/09 to 26/09/16

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	1 days
Tuesday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	2 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Town Centre	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Commercial Zone	1
Built-Up Zone	1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C1	1 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Secondary Filtering selection (Cont.):

Population within 1 mile:

25,001 to 50,000	2 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

250,001 to 500,000	1 days
500,001 or More	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	2 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	2 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	2 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1 DS-06-A-02 JURY'S INN DERBYSHIRE
KING STREET

DERBY
Town Centre
Commercial Zone
Total Gross floor area: 1200 sqm
Survey date: TUESDAY *19/07/11* *Survey Type: MANUAL*

2 GM-06-A-08 IBIS GREATER MANCHESTER
PORTLAND STREET

MANCHESTER
Town Centre
Built-Up Zone
Total Gross floor area: 3600 sqm
Survey date: MONDAY *26/09/16* *Survey Type: MANUAL*

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

MANUALLY DESELECTED SITES

Site Ref	Reason for Deselection
GR-06-A-01	incompatible site wrt parking arrangements
TV-06-A-04	incompatible site wrt parking arrangements
WL-06-A-02	incompatible site wrt parking arrangements

Total Rates:			0.063			0.021			0.084

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	1200 - 3600 (units: sqm)
Survey date date range:	01/01/09 - 26/09/16
Number of weekdays (Monday-Friday):	2
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	1
Surveys manually removed from selection:	3

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			0.042			0.021			0.063

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	1200 - 3600 (units: sqm)
Survey date date range:	01/01/09 - 26/09/16
Number of weekdays (Monday-Friday):	2
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	1
Surveys manually removed from selection:	3

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.
