Kalwall®, developed and manufactured in the U.S.A. for over fifty years, is a highly insulating, diffuse-light-transmitting composite. A matrix of glass prisms inherent in Kalwall absorbs external light levels and redistributes an interior Museum-quality Daylighting™ that virtually eliminates glare, hot spots and shadows. Introducing natural daylight into any space is beneficial to health, productivity and general well-being.

Kalwall's unique construction reduces solar gain while at the same time maximizing thermal insulation with resultant cost and environmental benefits.

Kalwall is rated a green and sustain-

able building component because of the way it is manufactured and its material composition. It reduces both the environmental impact of the building process and the building's energy consumption. Importantly, it makes a substantial contribution to providing a safer and healthier indoor climate.

No other fenestration or system matches the performance of Kalwall.

Powerful Advantages

- Maximum Environmental Benefits
- Proven Structural Integrity
- Demanding Code Compliance
- Design and Aesthetic Flexibility
- System Reliability and Integrity... for over 50 years!

Sustainable... LEED® Contributor

The most highly insulating daylighting system in the world!

What Kalwall is...

The primary element of the Kalwall System is a flat or curved, structural composite sandwich panel formed by permanently bonding specially formulated, fiberglass-reinforced translucent faces to a grid core constructed of interlocked, structural aluminum/composite, thermally broken I-beams.

The natural thermal properties of the sandwich panel can deliver increased energy performance by the inclusion of translucent fiberglass "batts" or aerogel during the manufacturing process and by specifying a fully thermally broken grid core. U-value options range from .29 to .05 (1.57 to .28 W/m²K) by NFRC for the $2\sqrt[3]{4^{11}}$ (70 mm) thick panels and .15 or .08 (.83/.45 W/m2K) for 4" (100 mm) thick panels.

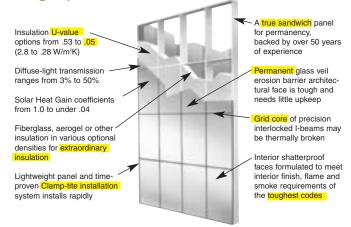

Kalwall panels are installed with the efficient, proven Clamptite™ aluminum system.

Milwaukee Zoo Primate House, Milwaukee, WI Iones & Iones Architects

Superior Load Capacity

When the wind starts to howl or rain and snow start to accumulate... or if someone walks across a skylight or skyroof, enormous loads push delicate poly-plastic panels far beyond their limit. Warping, buckling and collapsing result, followed by extensive interior damage and even bodily harm. Kalwall's composite panel delivers miraculous performance which can stand up to hurricane-force winds and other loads with ease.

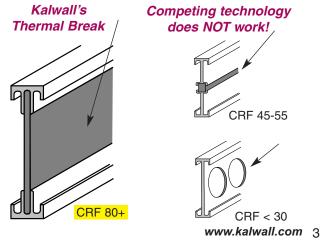

This is <u>NOT</u> possible with competitive systems!

Weathering/Color Change:

Kalwall's exterior face is made with innovative superweathering and colorfast resins the full thickness... not a low-grade substrate overlaid with thin plastic film or gel to simulate weatherability. All standard exterior faces include a permanent glass veil erosion barrier to prevent "fiber bloom"!

• Kalwall Structural Thermal Break Composite

- 2⁵/₈" (68 mm) I-beam 1³/₄" (44 mm) Non-conductive break
- 4" (100 mm) I-beam 3" (76 mm) Non-conductive break
- Stronger than aluminum Passes fire testing to 1200°F
- Superior insulation in panels U-values as low as .05 (.30 W/m²K)
- Stops condensation CRF 80+

Curtainwall • Window Replacement

BMW Wolverhampton, West Midlands, UK MDG Architects; Photo by Daniel Hopkins

- Rapidly and economically enclose space totally pre-finished when in place.
- · Epitomizes the original Kalwall translucent sandwich panel concept.
- · Controlled, natural daylight combined with many thermal and solar options.
- May be either flat or curved sandwich panels.
- Structural sandwich panels up to 5' x 20' (1500 mm x 6000 mm), 23/4" (70 mm) or 4" (100 mm) thick are secured to building with simple, Clamp-tite™ aluminum extrusions. System seals panel/panel and building, allowing for expansion/contraction and proper weepage to channel any moisture to building exterior.

X2 Warehouse, Heathrow Airport, UK; Cornish Architects Photo by Chris Mikami

Northumbria University, Newcastle, UK Atkins Design Studio, Architect

- Factory-assembled 2³/₄" (70 mm) sandwich panels, operating/fixed windows, louvers, even opaque panels.
- Provide rapid installation and permanent weather seal, unlike most stick-built, "frame and glaze" components which are all fieldassembled.
- Kalwall prefabricated Curtainwall Systems, like our Panel Wall Systems, are totally pre-finished inside and out.
- Delivered to the job site in large preassembled units up to 5' x 35' (1500 mm x 10700 mm) and larger, depending upon project details, handling and shipping constraints.

Curtainwall Systems

Central Library - University of Southern Maine, Portland, ME JSA, Inc., Architects

Greenwood Elementary School, Glen Allen, VA BCWH Architects; Chris Cunningham Photography

- Kalwall heavy-duty Window Replacement Systems - like our prefabricated Curtainwall Systems are factory-assembled into easily managed building units.
- · Kalwall provides optimum performancecontrolled daylighting and still allows for fulfillment of vision/ventilation requirements.
- · Vandal, graffiti, and impact resistance add up to minimal maintenance expenses with Kalwall.
- · Eliminates the need for costly blinds, shades or light shelves!

Custom Skyroof™ Systems

The David Geffen Foundation Building, Beverly Hills, CA Gwathmey Siegel & Associates Architects; Tom Bonner, Photography

- · Sandwich Panel Systems over substructure designed and installed by others.
- Flat, curved or combination for design versatility and consistent with all Kalwall Systems.
- · Easy, fast installation, coupled with large-sized panels to eliminate troublesome joints.

Roosevelt Elementary School, Elkhart, IN Fanning Howey Associates, Inc. Architects; Bill Lempke, Photography

Pfizer Global Research & Development, New London, CT

- · Combinations of sandwich panels, glass and framing components.
- · Standard modular walkways.

NEW!

 Fully pre-engineered canopies and walkways, including aluminum structure, are now available!

Walkways & Canopies

Yahoo Headquarters Sunnyvale, CA RMW Architects

Yankee Stadium, Bronx, NY; HOK Sport

- Taking Kalwall sandwich panel technology to another dimension... the marriage of aluminum box beams and Kalwall panels into a monolithic, structural space enclosure.
- Variety of designs, unequaled by any other daylighting system.
- Design control, fabrication, delivery and complete installation for the ultimate in single-source responsibility!
- Installations completed in weeks not months - due to component standardizations and CAD technology.
- Complete buildings, including Pool Enclosures, featuring non-corrosion and moisture resistance built-in.
- Thermal break technology for the ultimate condensation control.

Shed/Supported Ridge Skyroof™ Details

Designing Panel-Unit Walls

THIS

COMPONENTS

Factory-unitized in any combination up to 5' wide x 35' high (1500 mm x 10700 mm). Panel-units ready for installation with no additional finishing. Panel-units eliminate superfluous structure required with most other systems.

LOUVERS - WALL SYSTEMS

Specify Kalwall louver as required.

THERMAL BREAK SASH

Kalwall-manufactured, AAMA C-70 or HC-70 tested projecting sash for top performance up to 5' wide x 4'6" high (1500 mm x 1400 mm). Fixed and egress units also available. Glazing of all types, including 5/8" (16 mm) and 1" (25 mm) thick glazing panels available; factoryinstalled, if specified.

OPAQUE PANELS

Sandwich panel construction with fiberglass, aluminum or other faces can be combined in the same system for aesthetic value or to fine-tune energy performance.

PANEL OPTIONS

STANDARD PANEL SIZES

Width - 4' and 5' (1200 mm and 1500 mm), other widths up to 5' (1524 mm) are optional.

Length — 3' to 20' (914 mm to 6096 mm) standard, 16' (4880 mm) maximum for skyroofs.

Thickness — 4" (100mm), 23/4" (70 mm). 19/16" (40 mm) and 1" (25mm) for window glazing only.

STANDARD GRID DESIGNS

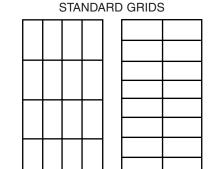

Nominal grid size — 12" x 24' (300 mm x 600 mm) standard; 8" x 20" (200 mm x 500 mm) optional for flat and curved panels.

OPTIONAL GRID DESIGNS

Other designs and grid sizes available. Please note that spans will vary with different grid patterns. Consult factory.

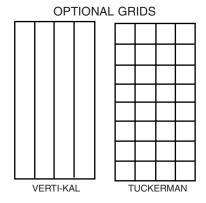

METAL FINISHES

The installation system is available in mill finish or Kalwall Corrosion Resistant Finish, a high-performance coating that meets AAMA 2604, 2605 optional. The finish is highly resistant to acids, alkalis, salt, industrial and moisture-laden atmospheres.

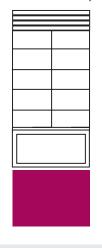

REVERSE SHOJI

SHOJI

White and Crystal are standard but other colors are available. The Kal-tint series and pebble finish are options. Colored translucent insulation inserts are available in an endless palette of colors.

INSTALLATION

QUICK, LOW-COST

Kalwall interconnected structural components form rigid, modular units which replace the heavy mullions and floating panels of other curtainwalls. The unique construction and extreme structural strength of the components permit the largest panel-unit wall sections to be installed quickly and efficiently.

Merry Hill Shopping Centre, Brierley Hill INC Design Associates, Architects

Technical Summary

Kalwall is a composite sandwich; various combinations are possible and test data should be interpreted from this point of view. Consult Sales Service Department for further clarification.

HEAT & LIGHT TRANSMISSION: Listed below are the light transmissions, solar heat gain coefficients, and U-factors for some 23/4" (70mm) thick Kalwall panel face sheet combinations. Others are available. Highlighted values indicate thermally broken panels.

U-value SI conversion: 1.0 W/m²K = 0.176 Btu/hr/ft²/°F

- 1. Approximate values by ASTM E-972. Light transmission values over 30% not recommended for most applications.
- 2. U-values determined by NFRC test method (ASTM C-236, E-1423 and C-1199 at certified lab). Expressed as Btu/hr/ft²/°F for aluminum grid / thermally broken grid, nominal 12" x 24" (300 mm x 600 mm). Perimeter aluminum excluded. Test temperature at 15 mph wind (6.7 m/s): 0°F (-18°C) cold side & 70°F (21°C) warm side.
- 3. Shading Coefficient (SC) is equal to 1.15 times the Solar Heat Gain Coefficient (SHGC).

NFRC CERTIFIED SYSTEMS: Kalwall systems provide the best overall U-values as low as .10 (.56 W/m²K)!

BOND STRENGTH: Panels and adhesives are tested according to the stringent requirements of "Criteria for Sandwich Panels" issued by ICC (International Code Council). Before specifying an alternate, insist on actual field proof of bond integrity over a 20-year period. Caution is urged in accepting look-alikes as equivalents.

WEIGHT: Most panels and systems weigh under 3 p.s.f. (14.65 kg/m^2).

FIRE TESTS: Although some Kalwall panels contain combustible binder resins (ignition temperature greater than 800°F), they will withstand a 1200°F flame for one hour with no flame penetration; pass the Class "A" Burning Brand Test (ASTM E-108), or UL 790 listed Class A Roof system, All interior faces are CC-1 by ASTM D-635. Optional flame-spread/smoke developed ratings by UL 723 tunnel tests, including Class A, are available. Kalwall is listed by: ICC #PFC-1705; British Standard 476, Parts 3, 6, 7. NFPA 268 – Radiant Panel Test-Exterior Walls.

Whenever reference is made to fire tests, the numerical rating is not intended to reflect hazards presented by this or any other material under actual fire conditions.

IMPACT: The shatterproof exterior face will withstand 70 ft.-lbs. (81J) impact. Optional extra-hi-impact faces will withstand 230 ft.-lbs. (311J) impact by UL 972; also small and large missile.
