

# Parker House - Planning Condition 3

---

January 2018

## Slate

Slate will be the pitched roof material for the two gable elements of the Parker Street retained façade, it will also be used on the mono pitched roof of Unit S2 on the Aldwych Mews Workshops.

For the Aldwych Workshops, the slate will be a combination of that which has been salvaged from the original structure, and a high quality new welsh slate sourced to match the original. To achieve the best visual aesthetic, a consistent mix of both old and new tiles will be spread across the roof. The slate used on the private development will be entirely new welsh slate which matches existing.
